

List of Figures

Figures		Pages
Fig. 2.1.1	Comparison of the absolute errors for $n = 3, 6$ and 11.....	37
Fig. 2.2.1	Comparison of the absolute errors for $n = 3, 6$ and 11.....	37
Fig. 2.3.1	Comparison of the absolute errors for $n = 3, 6$ and 11.....	38
Fig. 2.4.1	Comparison of the absolute errors for $n = 3, 6$ and 11.....	39
Fig. 2.5.1	Comparison of the absolute errors for $n = 3, 6$ and 11.....	39
Fig. 2.6.1	Comparison of the absolute errors for $n = 3, 6$ and 11.....	40
Fig. 2.7.1	Comparison of the absolute errors for $n = 3, 6$ and 11.....	41
Fig. 3.1.1	Comparison of the absolute errors for $n = 4, 5$ and 6 for the solution $u_1(t)$	55
Fig. 3.1.2	Comparison of the absolute errors for $n = 4, 5$ and 6 for the solution $u_2(t)$	55
Fig. 3.2.1	Comparison of the absolute errors for $n = 4, 5$ and 6 for the solution $u_1(t)$	57
Fig. 3.2.2	Comparison of the absolute errors for $n = 4, 5$ and 6 for the solution $u_2(t)$	57

Fig. 4.1.1	Comparison of approximation errors for the $y_1(t)$ by using Legendre wavelets (solid red line) and Bernstein polynomials (blue dotted line).....	72
Fig. 4.1.2	Comparison of approximation errors for the $y_2(t)$ by using Legendre wavelets (solid red line) and Bernstein polynomials (blue dotted line).....	73
Fig. 4.2.1	Comparison of approximation errors for the $y_3(t)$ by using Legendre wavelets (solid red line) and Bernstein polynomials (blue dotted line).....	74
Fig. 4.2.2	Comparison of approximation errors for the $y_4(t)$ by using Legendre wavelets (solid red line) and Bernstein polynomials (blue dotted line).....	74
Fig. 5.1.1	Absolute error for $n = 4$	89
Fig. 5.1.2	Absolute error for $n = 7$	89
Fig. 5.1.3	Absolute error for $n = 10$	89
Fig. 5.2.1	Absolute error for $n = 4$	90
Fig. 5.2.2	Absolute error for $n = 7$	90
Fig. 5.2.3	Absolute error for $n = 10$	91
Fig. 5.3.1	Absolute error for $n = 4$	91
Fig. 5.3.2	Absolute error for $n = 7$	92
Fig. 5.3.3	Absolute error for $n = 10$	92
Fig. 5.4.1	Absolute error for $n = 4$	94

Fig. 5.4.2	Absolute error for $n = 7$	95
Fig. 5.4.3	Absolute error for $n = 10$	95
Fig. 5.5.1	Absolute error for $n = 4$	97
Fig. 5.5.2	Absolute error for $n = 7$	98
Fig. 5.5.3	Absolute error for $n = 10$	98
Fig. 6.4.1	Plot of absolute errors between exact solution and approximate solution for $\alpha = \beta = 1$, where blue line represents absolute error of $u(x)$, orange line shows absolute error for $v(x)$, and red line indicates absolute error for $w(x)$	112
Fig. 6.4.2	Plot of exact solution (blue line) and proposed solution (red line) of $u(x)$, for $\alpha = \beta = 1$	112
Fig. 6.4.3	Plot of exact solution (blue line) and proposed solution (red line) of $v(x)$, for $\alpha = \beta = 1$	113
Fig. 6.4.4	Plot of exact solution (blue line) and proposed solution (red line) of $w(x)$, for $\alpha = \beta = 1$	113
Fig. 6.4.5	Approximate solution plot of $u(x)$, for $\alpha = \beta = 1$ (blue line), $\alpha = \beta = 0.9$ (orange line) and $\alpha = \beta = 0.7$ (red line)	114
Fig. 6.4.6	Approximate solution plot of $v(x)$, for $\alpha = \beta = 1$ (blue line), $\alpha = \beta = 0.9$ (orange line) and $\alpha = \beta = 0.7$ (red line)	114
Fig. 6.4.7	Approximate solution plot of $w(x)$, for $\alpha = \beta = 1$ (blue line), $\alpha = \beta = 0.9$ (orange line) and $\alpha = \beta = 0.7$ (red line)	115

Fig. 6.4.8	Plot of absolute errors between exact solution and approximate solution for $\alpha = \beta = 1$, where red line represents absolute error of $u(x)$ and blue line shows absolute error for $v(x)$116
Fig. 6.4.9	Plot of exact solution (red line) and proposed solution (blue line) of $u(x)$, for $\alpha = \beta = 1$117
Fig. 6.4.10	Plot of exact solution (red line) and proposed solution (blue line) of $v(x)$, for $\alpha = \beta = 1$117
