Abstract		v-xii
List of Figures		xvii–xxi
List of Tables		xxii– xxiv
List of Abbreviations		xxv
Chapter – 1:	**Introduction & Literature Review**	**1–32**
1.1	Introduction	1
1.2	Aerosols and particulate matter	5
	1.2.1 Particulate matter size categorization	5
	1.2.2 Global pollutant levels in ambient air	9
1.3	Sources of the particulate matter	11
	1.3.1 Sources of particulate matters due to mining activity	13
	1.3.2 Source identification and apportionment techniques of particulate matter	15
1.4	Exposure inhalation of particulate matter	19
1.5	Health effects due to ambient air pollutants	20
1.6	Recent investigations on ambient air pollutants	21
1.7	Research gap and relevance of study work	30
Chapter – 2:	**Objective & Justification of the Research Work**	**33-40**
2.1	Introduction	33
2.2	Objectives of the research work	34
2.3	Justification of the research work	35
2.4	Plan of the research work	36
Chapter – 3:	**Description of Study Area and Experimental Details**	**41-106**
3.1	General	41
3.2	Description of the study area	42
3.3	Selection of air quality monitoring station	44
3.4	Methodology used for particulate matters along with NO_2 and SO_2 sampling	45
	3.4.1 Monitoring and collection of air pollutants	48
3.5	Calculation of major air pollutant concentration	55
3.6	Characterization of particulate matter	60
	3.6.1 Sample treatment and analysis of particulate matters	60
	3.6.2 Analytical technique used	66
3.7	Quality control and assurance	85
3.8	Calculation of elements concentration	87
3.10	Analytical methods for gross alpha and beta	91
3.11	Analytical methods for natural radioactivity concentrations and risk assessment	95
3.12	Exposure inhalation dose and health risk assessment	98

3.13	Health risk assessment by the mathematical model	100
3.14	Receptor modeling for source identification and apportionment	102
Chapter – 4:	**Monitoring of Ambient Air Quality with reference Speciation and Concentration**	**107-142**
4.1	Introduction	107
4.2	Characterization of major air pollutants with reference to concentration	109
4.2.1	Spatial and temporal variation in the concentration of air pollutants	110
4.2.2	Seasonal variation in concentration of major air pollutants	114
4.2.4	Monthly average variation in concentration of major air pollutants	121
4.3	Frequency distribution of concentration of air pollutants	127
4.4	Correlations among major air pollutants	131
4.5	Meteorological parameters and concentration of major air pollutants	132
4.6	Air pollution index	137
4.7	Conclusion	140
Chapter – 5:	**Characterization of Particulate Matter with reference to Composition**	**143-192**
5.1	Introduction	144
5.2	Composition of major and trace elements of airborne dust	145
5.2.1	Concentration of major & trace elements in particulate matter	145
5.2.2	Percentage distribution of major & trace elements in particulate matter	168
5.2.3	Seasonal variation of major & trace elements in particulate matter	170
5.3	Concentration of water–soluble ions in particulate matter	179
5.3.1	Annual variation of water–soluble ions in particulate matter	179
5.3.2	Percentage distribution and seasonal variation of water–soluble ions in particulate matter	181
5.4	Enrichment factor of elements in particulate matter	183
5.5	Correlation studies among analyzed elements in particulate matter	185
5.6	Conclusion	191
Chapter – 6:	**Characterization of Particulate Matter with reference to Natural Radioactivity**	**193-208**
6.1	Introduction	193
6.2	Isotope activity concentration in particulate matter	195

6.3	Isotopic ratios in particulate matter	197
6.4	Correlation among the activity concentrations of isotopes with meteorological factors	199
6.5	Radium equivalent activity, Inhalation exposure, and lifetime cancer risk	201
6.6	Conclusion	206
Chapter – 7:	**Characterization of Particulate Matter with reference to Gross Alpha and Gross Beta Activity**	**209-222**
7.1	Introduction	209
7.2	Activity concentration of gross alpha and gross beta in particulate matter	210
7.3	Monthly and seasonal variation of gross α and gross β activity concentration in particulate matter	214
7.4	Correlation studies among the gross α and gross and meteorological factorsβ, particulate matter,	218
7.5	Total annual effective dose of gross α and gross β in particulate matter	220
7.6	Conclusion	221
Chapter – 8:	**Human health risk assessment due to inhalation of particulate matter**	**223-238**
8.1	Introduction	223
8.2	Element exposure and health risk assessment of air pollutants	225
	8.2.1 Uptake intake of elements through inhalation	225
	8.2.2 Inhalation dose and health risk assessment of air pollutants	226
8.3	Risk assessment of element to human health	230
	8.3.1 Normal average daily dose and lifetime average daily dose assessment of elements in particulate matter	230
	8.3.2 Non-carcinogenic health risk assessment of elements via inhalation exposure	234
	8.3.3 Carcinogenic health risk assessment of elements via inhalation exposure	234
8.4	Conclusion	238
Chapter – 9:	**Source identification and apportionment**	**239-264**
9.1	Introduction	239
9.2	Receptor modeling for source identification and apportionment	240
	9.2.1 X–ray diffraction of deposited particles	240
	9.2.2 Morphology of deposited particles	243
	9.2.3 Principal component analysis	248
	9.2.4 Positive matrix factorization	254

9.3	Conclusions	262
Chapter – 10:	**Management of particulate matter**	**265-286**
10.1	Introduction	265
10.2	Existing method of suppression for particulate matter in mining industry	267
10.3	Experimental details of the proposed method for suppression of particulate matter	272
10.4	Concentration of suspended particulate matter and laboratory investigation of particulate matters suppression	277
10.5	Conclusion	286
Chapter – 11:	**Conclusions & Future work**	**287-290**
11.1	Conclusions	287
11.2	Future work	290
References		**291-310**
List of Publications		**311**
