PREFACE ..... **xxvii**

Chapter 1 Introduction and Literature Review **1**

1.1 Introduction 1

1.1.1 Crystal Structure 2

1.1.2 Magnetic Behaviour 6

1.1.3 Applications 17

1.2 Literature survey 23

1.2.1 Synthesis of the Polymorphs of MnO_2 23

1.2.2 Structural Transformation: Effect of Synthesis Parameters & dopants 26

1.2.3 Structure, Morphology and Dopant Dependent Magnetic Properties 29

1.2.4 MnO_2 as an Electrode Material for Supercapacitor application 31

1.3 Objectives 37

Chapter 2 Synthesis and Characterization Techniques **41**

2.1 Sample preparation 41

2.1.1 Hydrothermal Synthesis Technique 42

2.2 Characterization Techniques 46

2.2.1 X-ray Diffraction (XRD) 47

2.2.2 Fourier Transform Infrared Spectroscopy (FT-IR) 50

2.2.3 Raman spectroscopy 51

2.2.4 Scanning Electron Microscope (SEM) 53

2.2.5 Transmission Electron Microscope (TEM) 54

2.2.6 X-ray Photoelectron Spectroscopy (XPS) 56

2.2.7 Brunauer-Emmett-Teller Measurement (BET) 57

2.2.8 UV-Visible Spectroscopy 58

2.2.9 Magnetic Measurements 59

2.2.10 Electrochemical Measurements 61

Chapter 3 Structure, Optical and Magnetic Properties with electrochemical Performance of α and β-MnO_2Nanorods 67

3.1 Introduction 67

3.2 Structure, Microstructure and Optical Properties 68

3.2.1 Fourier Transform Infrared Spectroscopy 68

3.2.2 X-Ray Diffraction: Rietveld Refinement 69

3.2.3 Emission Scanning Electron Microscope 74

3.2.4 UV Visible Spectroscopy 75

3.2.5 X-ray Photoelectron Spectroscopy 77

3.3 Electrochemical Performance Using Cyclic Voltammetry 80

3.4 Magnetic Properties 82

3.4.1 Temperature Dependent Magnetization 82

3.4.2 Field Dependent Magnetization 84

3.4.3 ac Susceptibility 86

3.4.4 Remanent Magnetization Measurement 91

3.5 Conclusion 94

Chapter 4 Structure, Microstructure and Magnetic Properties of Hydrothermally Synthesized δ-MnO_2 97

4.1 Introduction 97

4.2 Structural and Microstructural Analysis 98

4.2.1 X-ray Diffraction 98

4.2.2 Fourier Transform Infrared Spectroscopy 98

4.2.3 Raman Spectroscopy 100

4.2.4 Transmission Electron Microscope 101

4.2.5 X-Ray Photoelectron Spectroscopy 102

4.3 Magnetic Properties 104

4.3.1 Temperature Dependent Magnetization 104

4.3.2 Field Dependent Magnetization 109

4.3.3 ac Susceptibility 110

4.3.4 Remanant Magnetization Measurement 115

4.4 Conclusion 118

Chapter 5 Electrochemical Studies of Dy Doped α-MnO_2 Nanorods for Supercapacitor Application 119

5.1 Introduction 119
5.2 Structural and Microstructural Analysis 120
5.2.1 X-ray Diffraction 120
5.2.2 Raman Spectroscopy 122
5.2.3 Scanning Electron Microscope 123
5.2.4 Transmission Electron Microscope 125
5.3 Surface Area Analysis (BET) 127
5.4 Electrochemical Analysis 129
5.4.1 Cyclic Voltammetry 129
5.4.2 Galvanostatic Charge Discharge 133
5.4.3 Electrochemical Impedance Spectroscopy 136
5.5 Conclusion 138
Chapter 6 Magnetic Properties of Dy Doped α-MnO_2 Nanorods 139
6.1 Introduction 139
6.2 X-ray Photoelectron Spectroscopy 140
6.3 Magnetic Properties 142
6.3.1 Temperature Dependent Magnetization 142
6.3.2 Field Dependent Magnetization 145
6.3.3 Remanant Magnetization Measurement 149
6.3.4 Training Effect 150
6.4 Conclusion 156
Chapter 7 Conclusions and Future Work 157

List of Figures

Figure 1.1: MnO_6 octahedral molecular sieve (OMS) and its sharing pattern. 3

Figure 1.2: Arrangement of various MnO_2 framework by forming tunnel (n x m) structures [38]..... 5

Figure 1.3: The magnetization process in ferromagnets..... 8

Figure 1.4: Curie-Weiss law for the ferromagnetic material (a) χ Vs T and (b) χ^{-1} Vs T above and below $T_{C.}$ 8

Figure 1.5: Magnetization M versus applied field H for a ferromagnetic material (Hysteresis loop)..... 9

Figure 1.6: (a) Outline of magnetic dipoles in antiferromagnetic material aligns in opposite direction, Curie-Weiss law (b) χ Vs T and (c) χ^{-1} Vs T above and below $T_{N.}$..... 11

Figure 1.7: Arrangement of spins in different types of antiferromagnetism. 11

Figure 1.8: Bathe-Slater curve showing the variation of exchange integral with 3d orbital radius r_{3d} relative to atomic radius r_a. 14

Figure 1.9: Schematic diagram for (a) superexchange interaction and (b) double exchange interaction. 16

Figure 1.10: Various properties of MnO_2 nanostructures..... 19

Figure 1.11: Different applications of MnO_2 nanostructures. 20

Figure 1.12: Taxonomy of materials for supercapacitors..... 21

Figure 1.13: Schematic diagram of supercapacitor (a) EDLC and (b) Pseudocapacitor.... 21

Figure 1.14: XRD patterns of the different compositions of Zn/Mn mix-MnO_2..... 28

Figure 1.15: Constrained equilibrium thermodynamics driving phase selection between MnO_2 polymorphs as a function of solution conditions at 298 K and zero applied potential, for solutions containing (a) Li^+, (b) Na^+, (c) K^+, (d) Mg^{2+}, or (e) Ca^{2+} cations..... 28

Figure 1.16: (a) Galvanostatic charge/discharge curves of MnO_2 and Co-MnO_2 spheres at a current density of 1 A/g (b) cyclic stability of MnO_2 and Co-MnO_2 at a current density of 2 A/g. 33

Figure 2.1: Flow chart for the synthesis of MnO_2 using hydrothermal technique. 43

Figure 2.2: Flow chart for the Synthesis of α-MnO_2, β-MnO_2, and αβ-MnO_2. 44

Figure 2.3: Flow chart for the Synthesis of δ-MnO_2 and α-MnO_2. 45

Figure 2.4: Schematic Flow chart for the synthesis of bare and Dy doped α-MnO_2. 46

Figure 2.5: Schematic diagram of incident and diffracted X-rays from the crystal lattice. 48

Figure 2.6: Schematic representation of X-ray technique. 49

Figure 2.7: Schematic diagram for the simplified setup of Raman spectroscopy. 52

Figure 2.8: UV-Visible Spectrophotometer. 58

Figure 2.9: MPMS-3, Quantum Design (USA) used for magnetic measurement 60

Figure 2.10: An electrochemical three electrode setup. 62

Figure 2.11: Schematic circuit diagram of electrochemical three electrode setup (Potentiostat/Galvanostat, PSTAT/GSTAT).[152] 63

Figure 3.1: Fourier-Transform Infrared (FT-IR) spectrum of α-MnO_2, β- MnO_2 and αβ-MnO_2 nanorods. 68

Figure 3.2: Room temperature X-Ray diffraction (XRD) pattern of (a) α-MnO_2, (b) γ-MnOOH, and (c) αβ- MnO_2 nanorods. 70

Figure 3.3: X-Ray diffraction (XRD) pattern of α-MnO_2, β-MnO_2, and αβ- MnO_2 nanorods calcined at 400° C. 71

Figure 3.4: XRD pattern of α-MnO_2, β- MnO_2 and αβ- MnO_2 nanorods fitted using Rietveld refinement of Fullprof program. 71

Figure 3.5: Scanning electron micrograph (SEM) of (a) α-MnO_2, (b) β- MnO_2 and (c) αβ-MnO_2 nanorods. 73

Figure 3.6: particle size distribution histogram of (a) α-MnO_2, (b) β- MnO_2, (c.1) phase 1 and (c.2) phase 2 of αβ- MnO_2 nanorods. 74

Figure 3.7: (a) UV-visible absorption spectra of α-, β- and αβ-MnO_2 nanorods. Tauc plot and the corresponding linear fit for the calculation of optical bandgap of (b) α-MnO_2, (c) β-MnO_2 and (d) αβ-MnO_2 nanorods. 76

Figure 3.8: X-Ray photoelectron spectra of Mn 2p for (a) α-MnO_2, (b) β- MnO_2 and (c) αβ- MnO_2 nanorods. 78

Figure 3.9: X-Ray photoelectron spectra of O 1s for (a) α-MnO_2, (b) β- MnO_2 and (c) αβ-MnO_2 nanorods. 79

Figure 3.10: Cyclic voltammogram of as prepared α-MnO_2, β- MnO_2 and αβ- MnO_2 nanorods at the scan rate of 20 mV/sec. 81

Figure 3.11: Temperature dependent magnetization (M-T) curve of (a) α-MnO_2, (b) β-MnO_2 and (c) αβ- MnO_2 nanorods. 84

Figure 3.12: Inverse susceptibility versus temperature fitted with Curie-Weiss law for (a) α-MnO_2, (b) β- MnO_2 and (c) αβ- MnO_2 nanorods. 85

Figure 3.13: Magnetization versus magnetic field at 2K for (a) α-MnO_2, (b) β- MnO_2 and (c) αβ- MnO_2 nanorods. Inset shows the enlarged view. 86

Figure 3.14: Temperature dependence of real (χ') and imaginary (χ'') of ac susceptibility data at 31, 101, 299 and 501 Hz with an ac field of 3 Oe for (a) α-MnO_2, (b) β- MnO_2 and (c) αβ- MnO_2 nanorods and corresponding inset shows the enlarge view at peak position. 89

Figure 3.15: Variation of relaxation time (τ) with temperature (T) plotted and fitted with (a) Neel-Arrhenius law (b) Vogel–Fulcher law and (c) Power law for αβ- MnO_2 nanorods. Solid line represents the fitting. 92

Figure 3.16: Thermoremanent magnetization measurement at 5 K fitted with stretched exponential decay functions for (a) β-MnO_2 and (b) αβ-MnO_2 nanorods. 94

Figure 4.1: X-ray diffraction pattern of δ-MnO_2. 99

Figure 4.2: FTIR spectrum of δ-MnO_2. 100

Figure 4.3: Raman spectroscopy of δ-MnO_2. 101

Figure 4.4: (a) Low resolution and (b) high resolution image of Transmission electron micrograph of δ-MnO_2. Inset shows the particle size distribution histogram, (c) High resolution TEM and (d) SAED pattern of δ-MnO_2. 102

Figure 4.5: X-ray photoelectron spectroscopy of (a) Mn 2p and (b) O 1s of δ-MnO_2. 103

Figure 4.6: (a) Temperature dependent magnetization (M-T) curve of δ-MnO_2 measured under applied field of 100 Oe. (b) shows the derivative dM/dT with temperature and (c) shows the inverse susceptibility versus temperature fitted with Curie-Weiss law in paramagnetic region. 106

Figure 4.7: Temperature dependent magnetization (M-T) curve of δ-MnO_2 measured under applied field of (a) 50, 100, 500 Oe, and (b) 10 kOe. (c) shows the field dependence of reduced temperature with the best fit in terms of A-T line. 108

Figure 4.8: (a) Magnetization vs. magnetic field at (a) 2, 10 and 30 K under ZFC and at (b) 2K under FC of δ-MnO_2. 110

Figure 4.9: Temperature dependence of real, χ' and imaginary, χ'' of ac susceptibility at 31, 101, 299 and 501 with ac field of 3 Oe. The inset shows the enlarged view of the peak shift with frequency. 112

Figure 4.10: (a) Variation of relaxation time τ with temperature T_b plotted as $\ln\tau$ versus $(T_b)^{-1}$ and fitted with Neel-Arrhenius law, (b) Vogel-Fulcher law and power law (inset). 114

Figure 4.11: Thermoremanent magnetization measurement at 5K fitted with (a) Power law, Logarithmic decay (inset) and (b) Stretched exponential decay functions. 116

Figure 5:1 XRD of bare α-MnO_2 and α-MnO_2: Dy (5, 10, 15, 20 mol %) nanorods. 121

Figure 5.2: Raman spectra of bare α-MnO_2 and α-MnO_2: Dy (5, 10, 15, 20 mol %) nanorods. Inset shows the enlarge view of Raman band at 633 cm^{-1}. 123

Figure 5.3: FE-SEM images of (a) bare α-MnO_2, (b) α-MnO_2: Dy (15 mol %) (c) α-MnO_2: Dy (20 mol %) nanorods. 124

Figure 5.4: Particle size distribution hystograms of bare α-MnO_2 and α-MnO_2: Dy (15 and 20 mol %) nanorods. 125

Figure 5.5: TEM and HR-TEM images (a,b) for bare and (c, d) for α-MnO_2: Dy (15 mol %) nanorods. SEAD patterns are shown in the inset of (b) and (d). 126

Figure 5.6: (a) Nitrogen adsorption desorption isotherms of bare and α-MnO_2: Dy (5, 10 and 15 mol %) nanorods and (b) shows the corresponding pore size distribution. 128

Figure 5.7: Electrochemical performances of bare and α-MnO_2: Dy (5, 10, 15, 20 mol %) nanorods (a) at 5 mV/sec (b) Specific capacitance Vs. Dy concentration (c) α-MnO_2: Dy (15 mol %) at various scan rate and (d) specific capacitance at different scan rate. 131

Figure 5.8: Relationship between the maximum current and square root of the scan rate of bare and α-MnO_2: Dy (5, 10, 15, 20 mol %) nanorods. 132

Figure 5.9: (a) Galvanostatic charge discharge at 10 A/g, (b) specific capacitance at various current density of bare and α-MnO_2: Dy (5,10,15,20 mol%) nanorods, (c) charge discharge at different current densities and (d) cycling performance at the current density of 2 A/g of α-MnO_2: Dy (15 mol %). 134

Figure 5.10: (a) Nyquist plot showing charge transfer resistances and inset shows the electrical equivalent circuit for bare and α-MnO_2: Dy (5,10,15 & 20 mol%) nanorods and (b) Bode images of bare and α-MnO_2: Dy (5,10,15,20 mol%) nanorods. 137

Figure 6.1: (1) X-ray photoelectron spectroscopy for Mn 2p in (a) α-MnO_2 (b) α-MnO_2:Dy, (2) Dy 4d in α-MnO_2 and (3) for O1s in (a) α-MnO_2 and (b) α-MnO_2:Dy nanorods. 141

Figure 6.2: Temperature dependent magnetization of (a) α-MnO_2 and α-MnO_2:Dy under ZFC and FC. 144

Figure 6.3: The inverse susceptibility,$1/\chi$ Vs. T data in paramagnetic region is fitted with the equation $\chi^{-1} = T/C + 1/\chi_o - b/(T-\theta)$ for (a) α-MnO_2 and (b) α-MnO_2:Dy measured at an external applied field of 100 Oe. 144

Figure 6.4: Field dependent magnetization M(H) for ZFC at 2K, 15K and 30K of α-MnO_2 and α- MnO_2:Dy nanorods. 147

Figure 6.5: (a) Field dependent magnetization M(H) for FC under the field of 10 kOe at 2K of α-MnO_2 and α-MnO_2:Dy nanorods. Upper inset shows the corresponding coercivity at positive field of α-MnO_2. (b) Shows the variation of exchange bias with cooling field for both samples. 148

Figure 6.6: Schematic of core shell model of α-MnO_2 and α-MnO_2:Dy nanorods having diameter 40 and 20 nm, respectively. The arrows indicate the magnetic state of the spins after initial magnetization. 150

Figure 6.7: Variation of thermoremanent remnant magnetization [M(t)] at 2K for α-MnO_2 and α-MnO_2:Dy (in inset) nanorods. 151

Figure 6.8: (a) Enlarge view of five hysteresis loops to reveal the shift of the loop with increasing loop number for α-MnO_2, (b) Variation of coercive fields Hc_1 and Hc_2 with number of recurrent hysteresis loops n. 154

Figure 6.9: symbols represent the experimental data for H_{EB} versus loop index number (n). Dotted line corresponds to a fit with a power law for $n \geq 2$, while solid line illustrates the best fit with equation 6.9..... 155

List of Tables

Table 1.1: Crystallographic data of polymorphs of MnO_2. 4

Table 1.2: Polymorphs of MnO_2 with different morphologies and their specific capacitance. 32

Table1.3: Comparision of specific capacitance of cation-doped-MnO_2 nanostructures reported in literatures. 35

Table1.4: Comparision of the specific capacitance of MnO_2 nanocomposites reported in the literature. 36

Table 3.1: Structural parameters obtained from Rietveld refinement fitting for (a) α-MnO_2, (b) β-MnO_2 and (c) αβ- MnO_2 nanorods. 72

Table 3.2: Mn^{+3}/Mn^{+4} and O_b/O_a obtained from fitting of Mn 2p and O 1s XPS peaks using software XPS peak 4.1 for α-MnO_2, β- MnO_2 and αβ- MnO_2 nanorods. 80

Table 3.3: Fitting parameters deduced from ac susceptibility data fitted with Neel-Arrhenius law, Power law and Vogel-Fulcher law for αβ- MnO_2 nanorods. 91

Table 3.4: Fitting parameters deduced from thermoremanent relaxation magnetization fitted with stretched exponential decay function for (1) β- MnO_2 and (2) αβ- MnO_2 nanorods. 93

Table 4.1: Fitting parameters deduced from thermo remanant relaxation magnetization fitted with empirical relations like power law decay, logarithmic decay and stretched exponential decay functions. 117

Table 5.1: Data obtained from EDAX for Dy in α-MnO_2: Dy (5, 10, 15 and 20 mol %). 125

Table 5.2: Parameters obtained from Nitrogen adsorption desorption isotherm of bare and α-MnO_2: Dy (5, 10 and 15 mol %) nanorods. 129

Table 5.3: Comparison of specific capacitance of metal oxides reported in literatures with the present material, α-MnO_2: Dy (15 mol %). 133

Table 5.4: EIS fitted parameters of bare MnO_2 and α-MnO_2: Dy (5, 10, 15 and 20 mol %). 138

Table 6.1: Numeric value of exchange bias field and percentage of training effect during each cycle for bare and Dy doped α-MnO_2. 152

Table 6.2: Values of the expression 6.9 fitting parameters approximating experimental data for training effect. 156
