

List of Tables

2.1 Outline of lipid suspension-based phantoms	26
3.1 Different constituents of 10% Intralipid™ suspension.....	51
3.2 Significant literature on biomedical research application of 20-40 kHz for selection of ultrasound frequency	56
3.3 Absorption features dependent stretch and vibration patterns of the glucose molecule.....	58
3.4 Researchers using 940 nm wavelength for measuring glucose non-invasively.....	60
3.5 Sensitivity analysis of glucose molecule at 940 nm	62
3.6 Amplitude modulated signal characteristics	63
3.7 Waveform characteristics as generated by the USR unit.....	65
3.8 Square wave signal characteristics.....	66
3.9 The output signal parameters as acquired from the human blood plasma sample mixed with Intralipid™ phantom medium	70
3.10 Showing the volume of reagent and sample into test tubes	89
3.11 Performance evaluation parameters.....	95
4.1 A summary of the effect of glucose upon the basic optical properties of a tissue phantom and the light transport within this tissue phantom	98
4.2 Showing mathematical function values of blank with Intralipid™ phantom (tissue based)	107
4.3 Showing mathematical function values of 500 mg dextrose with Intralipid™ phantom (tissue based).....	107
4.4 Showing mathematical function values of 1000 mg dextrose with Intralipid™ phantom (tissue based).....	107
4.5 Showing mathematical function values of 1500 mg dextrose with Intralipid™ phantom (tissue based).....	108

5.1 Clarke error grid analysis of reference and predicted blood glucose levels as acquired during OGTT over 03 human subject’s blood plasma mixed with Intralipid™ phantom samples.....	116
5.2 Parkes Error Grid analysis of reference and predicted blood glucose levels as acquired during OGTT over 03 human subject’s blood plasma mixed with Intralipid™ phantom samples.....	117
5.3 Statistical parameters utilized for accuracy assessment and the results comparison with the published data ranges of other developing glucose monitoring techniques	118
5.4 Clarke Error Grid analysis of reference and predicted blood glucose levels as acquired during OGTT over 30 human subject’s blood plasma mixed with Intralipid™ phantom samples.....	126
5.5 Parkes Error Grid analysis of reference and predicted blood glucose levels as acquired during OGTT over 30 human subject’s blood plasma mixed with Intralipid™ phantom samples.....	127
5.6 Statistical parameters utilized for accuracy assessment and the results comparison with the published data ranges of other developing glucose monitoring techniques	129
5.7 Clarke Error Grid analysis of reference and predicted blood glucose levels as acquired during fasting, postprandial and random stage examination over 30 human subject’s blood plasma mixed with Intralipid™ phantom samples	131
5.8 Parkes Error Grid analysis of reference and predicted blood glucose levels as acquired during fasting, postprandial and random stage examination over 30 human subject’s blood plasma mixed with Intralipid™ phantom samples	132
5.9 Statistical parameters utilized for accuracy assessment and the results comparison with the published data ranges of other developing glucose monitoring techniques	133
5.10 Clarke Error Grid analysis of reference and predicted blood glucose levels as acquired from 15 normal and 15 diabetic human subject’s blood serum mixed with Intralipid™ phantom samples	140
5.11 Parkes Error Grid analysis of reference and predicted blood glucose levels as acquired from 15 normal and 15 diabetic human subject’s blood serum mixed with Intralipid™ phantom samples	141

5.12 Statistical parameters utilize for accuracy assessment and the results comparing with published data ranges of other developing glucose monitoring techniques	143
5.13 Clarke Error Grid analysis of reference and predicted blood glucose levels as acquired during fasting, postprandial and random stage examination over 31 human subject's blood serum mixed with Intralipid™ phantom samples.....	146
5.14 Parkes Error Grid analysis of reference and predicted blood glucose levels as acquired during fasting, postprandial and random stage examination over 31 human subject's blood serum mixed with Intralipid™ phantom samples.....	147
5.15 Statistical parameters utilized for accuracy assessment and the results comparison with the published data ranges of other developing glucose monitoring techniques	148
5.16 Clarke Error Grid analysis of reference and predicted blood glucose levels as acquired from 10 human subject's whole blood mixed Intralipid™ phantom samples	153
5.17 Parkes Error Grid analysis of reference and predicted blood glucose levels as acquired from 10 human subject's whole blood mixed Intralipid™ phantom samples	154
5.18 Statistical parameters utilized for accuracy assessment and the results comparison with the published data ranges of other developing glucose monitoring techniques	155
5.19 Clarke Error Grid analysis of reference and predicted blood glucose levels as acquired from 23 human subject's whole blood mixed with Intralipid™ phantom samples.....	158
5.20 Parkes Error Grid analysis of reference and predicted blood glucose levels as acquired during fasting, postprandial and random stage examination over 23 human subject's whole blood mixed Intralipid™ phantom samples.....	159
5.21 Statistical parameters utilized for accuracy assessment and the results comparison with the published data ranges of other developing glucose monitoring techniques	161
5.22 Clarke Error Grid analysis of reference and predicted blood glucose levels as acquired in Category I: random stage based examination over 10 human subject's whole blood mixed with Intralipid™ phantom samples.....	167

5.23 Parkes Error Grid analysis of reference and predicted blood glucose levels as acquired during Category I: random stage based examination over 10 human subject's whole blood mixed with Intralipid™ phantom samples.....	168
5.24 Clarke Error Grid analysis of reference and predicted blood glucose levels as acquired during Category II: random stage based examination over 10 human subject's whole blood mixed with Intralipid™ phantom samples.....	170
5.25 Parkes Error Grid analysis of reference and predicted blood glucose levels as acquired during Category II: random stage based examination over 10 human subject's whole blood mixed with Intralipid™ phantom samples.....	171
5.26 Clarke Error Grid analysis of reference and predicted blood glucose levels as acquired during Category III: random stage based examination over 10 human subject's whole blood mixed with Intralipid™ phantom samples.....	172
5.27 Parkes Error Grid analysis of reference and predicted blood glucose levels as acquired during Category III: random stage based examination over 10 human subject's whole blood mixed with Intralipid™ phantom samples.....	173
5.28 Clarke Error Grid analysis of reference and predicted blood glucose levels as acquired during Category I, II and III: random stage based examination over 30 human subject's whole blood mixed with Intralipid™ phantom samples.....	175
5.29 Parkes Error Grid analysis of reference and predicted blood glucose levels as acquired during Category I, II and III: random stage based examination over 30 human subject's whole blood mixed with Intralipid™ phantom samples.....	176
5.30 Statistical parameters utilized for accuracy assessment and the results comparison with the published data ranges of other developing glucose monitoring techniques	177
5.31 <i>In-vitro</i> experiments performed and measured by the MUS-IR Unit on Distilled Water treated as a phantom by adding different concentration of dextrose (glucose) solutions	179
5.32 <i>In-vitro</i> experiments performed and measured by the MUS-IR Unit on Commercialized Milk solution treated as an optical tissue phantom by adding different concentration of dextrose (glucose) solutions.....	181

5.33 <i>In-vitro</i> experiments performed and measured by the MUS-IR Unit on Chicken Breast Tissue sample treated as a phantom by adding different concentration of dextrose (glucose) solutions	182
5.34 <i>In-vitro</i> experiments performed and measured by the MUS-IR Unit on Human Whole Blood sample treated as a phantom by adding different concentration of dextrose (glucose) solutions	183
6.1 Deming Regression based analysis	189
6.2 Linear model validity	190
6.3 Paired samples t-test	192
6.4 Mountain Plot based analysis.....	194
6.5 Bland-Altman Plot based analysis	196
6.6 Pearson correlation coefficient (r) analysis.....	198
6.7 Rank Correlation Coefficients analysis	200
6.8 Total Error Limits: ISO 15197-2013	201
6.9 Clarke Error Grid analysis of reference and predicted blood glucose levels as acquired during <i>in-vitro</i> examination of overall human subject’s blood samples mixed with Intralipid™ phantom.....	203
6.10 Parkes Error Grid analysis of reference and predicted blood glucose levels as acquired during <i>In-vitro</i> examination of overall human subject’s blood samples mixed with Intralipid™ phantom.....	205
6.11 Statistical parameters utilized for accuracy assessment and the results comparison with published data ranges of other developing glucose monitoring techniques	208
