

CONTENTS

ACKNOWLEDGEMENTS	I
SYNOPSIS	II-VIII
INDEX OF TABLES AND FIGURES	IX-XVI
CHAPTER-1: INTRODUCTION	1-51
1.1 PRIMARY RESERVES, PRODUCTION SCENARIO AND SECONDARY RESOURCES	3
1.1.1. Lithium	3
1.1.2. Nickel	7
1.1.3. Cobalt	9
1.1.4. Manganese	13
1.1.5. Zinc	14
1.1.6. Rare Earth Elements (REs)	16
1.2. RECYCLING OF SECONDARY RESOURCES	22
1.3. RECYCLING OF METALS FROM BATTERIES	23
1.3.1. Lithium Ion Batteries and Recovery of Metals	26
1.3.1.1. <i>Recent development in recycling of lithium ion batteries</i>	29
1.3.2. Nickel Metal hydride (NiMH) batteries	38
1.3.2.1. <i>Pre-treatment/Dismantling/ mechanical separation</i>	43
1.3.2.2. <i>Recent development in recycling of nickel metal hydride batteries</i>	44
1.4. Kinetics of leaching	46
1.5. Objectives and scope of the work	51
CHAPTER-2: MATERIALS & METHODS	52-66
2.1 Spent lithium ion batteries	53
2.1.1 Dismantling of spent LIBs and characterization of cathode active material	53
2.1.2 XRD analysis of cathode active material	55
2.2 Spent nickel metal hydride batteries	56
2.2.1 Dismantling of spent NiMH batteries and characterization of electrode powder	59
2.2.2 XRD analysis of electrode material of spent NiMH batteries	60
2.3 Leaching of metals from the battery material	64
2.3.1 Recovery of metals from the leach liquors by precipitation	65
2.4 Process intensification by baking of the battery powder	65
CHAPTER-3: EXTRACTION OF METALS FROM SPENT LITHIUM ION BATTERIES	67-139
3.1 Leaching of metals from the cathode active material in absence of reductant	68
3.1.1 Thermodynamic aspects of the metals in cathode active material	68
3.1.2 Leaching of metals using different acids	70
3.1.3 Effect of time on the leaching of metals	71
3.1.4 Effect of stirring speed	72
3.1.5 Effect of pulp density on the leaching of metals	73
3.1.6 Effect of temperature on the leaching of metals	74
3.1.7 Kinetics of leaching	75
3.1.8 Characterization of the leach residue	77
3.2 Leaching of metals from the cathode material in presence of sodium	85

HYDROMETALLURGICAL PROCESSING OF SPENT BATTERIES FOR THE RECOVERY OF METALLIC VALUES

bisulfite as a reductant	
3.2.1 Effect of NaHSO ₃ concentration on the leaching of metals	85
3.2.2 Effect of time	86
3.2.3 Effect of pulp density	87
3.2.4 Effect of temperature	87
3.2.5 Kinetics of leaching	90
3.2.6 Characterization studies	92
3.3 Leaching of metals from the cathode material in presence of H ₂ O ₂ as a reductant	98
3.3.1 Effect of H ₂ O ₂ concentration on the leaching of metals	98
3.3.2 Effect of pulp density	102
3.3.3 Effect of time	103
3.3.4 Effect of temperature	103
3.3.5 Kinetics of leaching	104
3.3.6 Mechanism of metal dissolution in presence of H ₂ O ₂	106
3.4 Process intensification by acid baking and leaching to extract metals from cathode material	109
3.4.1 Sulfuric acid baking and water leaching	109
3.4.1.1 <i>Effect of amount of sulfuric acid</i>	110
3.4.1.2 <i>Effect of baking temperature</i>	110
3.4.1.3 <i>Effect of baking duration</i>	111
3.4.1.4 <i>Effect of optimized baking conditions on the metal recovery(Leach-I)</i>	114
3.4.1.5 <i>Effect of lixiviant type</i>	114
3.4.1.6 <i>Effect of leaching temperature</i>	115
3.4.1.7 <i>Effect of pulp density</i>	115
3.4.1.8 <i>Effect of leaching time</i>	116
3.4.1.9 <i>Optimum conditions and residue characterization</i>	117
3.4.2 Second stage leaching (leach-II)	118
3.4.2.1 <i>Effect of concentration of lixiviant (acid/mixtures)</i>	118
3.4.2.2 <i>Effect of addition of reducing agent</i>	119
3.4.2.3 <i>Effect of temperature</i>	121
3.4.2.4 <i>Effect of leaching time</i>	121
3.4.2.5 <i>Effect of pulp density</i>	122
3.5 Separation and synthesis of metal salts from the solution generated during the leaching in presence of NaHSO ₃ as the reductant	130
3.5.1 Precipitation of cobalt oxalate	130
3.5.2 Precipitation of Mn and Ni	131
3.5.3 Recovery of lithium as Li ₂ CO ₃	134
CHAPTER-4: EXTRACTION OF METALS FROM SPENT NICKEL-METAL HYDRIDE BATTERIES	140-187
4.1 Leaching of base metals from spent NiMH batteries	141
4.1.1 Leaching of metals using different acids	141
4.1.2 Effect of leaching time	143
4.1.3 Effect of stirring speed	143
4.1.4 Effect of pulp density	144
4.1.5 Effect of temperature	144

HYDROMETALLURGICAL PROCESSING OF SPENT BATTERIES FOR THE RECOVERY OF METALLIC VALUES

4.1.6 Kinetics of Leaching	145
4.1.7 Characterization of solids and leaching mechanism	146
4.2 Leaching of rare earth metals from spent NiMH batteries	155
4.2.1 Effect of initial H ₂ SO ₄ concentration	155
4.2.2 Effect of leaching time	156
4.2.3 Effect of pulp density	156
4.2.4 Effect of temperature	158
4.2.5 Kinetics of leaching	162
4.2.6 Mechanism of the leaching	163
4.2.7 Precipitation of rare earth metals from the leach liquor	169
4.3 Process intensification by acid baking and water leaching to extract metals from the electrode material	172
4.3.1 Sulfuric acid baking and water leaching	172
4.3.1.1 <i>Effect of amount of sulfuric acid</i>	173
4.3.1.2 <i>Effect of baking temperature</i>	173
4.3.1.3 <i>Effect of baking duration</i>	174
4.3.2. Optimization of the leaching parameters from the acid baked material	177
4.3.2.1. <i>Effect of lixiviant type</i>	177
4.3.2.2. <i>Effect of leaching temperature</i>	177
4.3.2.3. <i>Effect of pulp density</i>	177
4.3.2.4. <i>Effect of leaching time</i>	178
4.3.3. Second stage leaching (leach-II)	180
4.3.4. Material characterization	182
CHAPTER-5: CONCLUSIONS	188-192
SUGGESTIONS FOR FUTURE WORK	193-194
REFERENCES	195-210
APPENDIX: List of Publications in Journals and Conference Proceedings	211-213
