

<b>List of tables</b>		
<b>Table No.</b>	<b>Caption of table</b>	<b>Page No.</b>
<b>Table 2.1:</b>	Design parameters of the water-loaded conventional MDH antennas	30
<b>Table 2.2:</b>	SAR parameters in the biological phantom due to the conventional MDH antennas designed at 2450 and 915 MHz	43
<b>Table 2.3:</b>	Properties of bio-media and tumor	45
<b>Table 2.4:</b>	Hyperthermia performance due to the water-loaded conventional MDHs	53
<b>Table 2.5:</b>	Thermal parameters of bio-media for the BHE	53
<b>Table 3.1:</b>	Design parameters of the water-loaded improved MDHs	57
<b>Table 3.2:</b>	SAR parameters in the muscle medium owing to the improved/conventional MDHs	73
<b>Table 3.3:</b>	Properties of bio-media and tumor	76
<b>Table 3.4:</b>	Hyperthermia performance due to the water-loaded improved MDHs	84
<b>Table 4.1:</b>	Dimensional details of the water-loaded MDWDHs	87
<b>Table 4.2:</b>	SAR Parameters due to the MDWDH/conventional MDH antennas terminated in homogeneous phantom bio-medium	95
<b>Table 4.3:</b>	Hyperthermia performance due to the water-loaded MDWDH applicators	106
<b>Table 5.1:</b>	SAR parameters and -10 dB reflection coefficient bandwidth for various antenna configurations	114
<b>Table 5.2:</b>	SAR parameters and -10 dB reflection coefficient bandwidth for various antenna configurations	125
<b>Table 5.3:</b>	Peak SAR and PD in the homogeneous muscle model for various values of system's radius of curvature	128
<b>Table 5.4:</b>	Dielectric properties of bio-media	130
<b>Table 5.5:</b>	Hyperthermia performance of the proposed applicator for various values of system's radius of curvature	135
<b>Table 5.6:</b>	Dimensional details of Human limbs model	136
<b>Table 5.7:</b>	Dielectric properties of bio-media	137

<b>Table 5.8:</b>	Hyperthermia performance of the proposed applicator in thigh and arm models	141
-------------------	---	-----

<b>Table 5.9:</b>	Thermal parameters of bio-media for the BHE	141
-------------------	---	-----
