Preface	xxv

Chapter-1 **Page #**

Introduction and Literature Review

1.1 Introduction	1
1.2 Human Olfaction System	2
1.3 Machine Olfaction and Electronic Nose	5
1.4 Advancement in Artificial Olfaction	8
1.4.1 Solid State Sensors Technology	8
1.4.2 Micro Gas Sensors	11
1.4.3 Advancements in Sensor's Signal Preprocessing	15
1.5 Advancement in Pattern Recognition	18
1.5.1 Traditional Statistical Discrimination Methods	20
1.5.2 Biological Inspired Discrimination Methods	21
1.6 Literature Review	21
1.7 Scope of the Present Thesis	32
1.8 Specific Aspects of the Present Work	33
1.9 Thesis Organization	34

Chapter-2

Design, Fabrication and Characterization of SnO₂ Based Thick Film Sensor Array

2.1 Introduction	37
2.2 Crystalline Structure and Electronic Properties of SnO₂	37

2.3	Surface Properties of SnO₂	39
2.3.1	Adsorption	41
2.3.2	Adsorption Isotherms	44
2.3.3	Gas Sensing Mechanism in SnO ₂	45
2.3.4	Doping	51
2.3.5	Sensor Operating Temperature	52
2.4	Fabrication of Gas Sensor Using Thick Film Technology	53
2.4.1	Artwork Generation for Sensor Array	54
2.4.2	Screen Preparation	55
2.4.3	Substrate	58
2.4.4	Thick Film Paste	59
2.4.5	Doped Tin Oxide Pastes	59
2.4.6	Deposition Equipment Properties and Screen Printing	60
2.4.7	Monitoring and Controlling Film Thickness	63
2.4.8	Drying and Firing Process	63
2.5	Gas Sensing Properties of Thick Film Gas Sensor	66
2.5.1	Sensitivity	66
2.5.2	Selectivity	66
2.5.3	Response and Recovery Time	67
2.5.4	Concentration of the Test Gas	68
2.6	Electrical Characterization of the Sensor Array	68
2.7	Validation of the Experimental Results	78
2.8	Conclusion	80

Chapter-3

Performance Comparison of LDA and PCA for Classification of Gases/Odors

3.1	Introduction	82
3.2	Materials and Methods	84
3.2.1	Experimental Background	84
3.2.2	Data Extraction	88
3.2.3	Principal Component Analysis	88

3.2.4	Linear Discriminant Analysis	92
3.2.5	Back Propagation Neural Network (BPNN)	98
3.2.6	Training functions	102
3.2.7	Cross Validation	105
3.3	Results and Discussion	105
3.4	Conclusion	112

Chapter-4

Classification and Quantification of Individual Gases/Odors Using Dynamic Responses of Thick Film Sensor Array

4.1	Introduction	113
4.2	Materials and Methods	115
4.2.1	Experimental Background	116
4.2.2	Data Extraction and Interpretation	116
4.2.3	Average Slope Multiplication (ASM) Method	120
4.3	Result and Discussion	124
4.3.1	Classification of Individual Gases/Odors with ASM Using Combined (Response and Recovery) Dataset	126
4.3.2	Simultaneous Quantification using ASM Method	128
4.3.3	Experiment with Exposure and Recovery Transients Data Individually	130
4.4	Conclusion	135

Chapter-5

Classification and Quantification of Binary Mixtures of Gases/Odors

5.1	Introduction	136
5.2	Materials and Methods	137
5.2.1	Experimental Background	139
5.2.1	Data Extraction and Interpretation	139
5.3	Classification and Quantification Methods	148
5.3.1	Back Propagation Neural Network	148
5.3.2	Support Vector Machines	149
5.3.3	Multioutput Support Vector Regression	151

5.3.4 Correlation Coefficient	153
5.4 Results and Discussion	154
5.5 Conclusion	158

Chapter-6

Summary and Conclusion

6.1 Summary and Conclusion	159
