Fig 2.1 Various MOS devices used as gas sensors

Fig 2.2 Cross sectional view of MOS capacitor

Fig 2.3 The charge distribution in p-type (left) and n-type (right) Si.

Fig. 2.4 Equivalent circuit of MOS capacitor

Fig 2.5 Energy band diagram of an ideal MOS structure at  $V_G = 0$  V for p-type semiconductor

Fig. 2.6 Energy band diagram of Ideal MOS in (a) accumulation; (b) depletion; (c) inversion region

Fig. 2.7 C-V characteristics of p-type MOS capacitor showing various surface conditions (a) accumulation (b) depletion (c) inversion

Fig. 2.8 Schematic illustration of oxide charges in non ideal MOS capacitor

Fig. 2.9 Energy band diagram and the charge distribution for a practical MOS structure

Fig. 2.10: Potential energy curves for physisorption and chemisorption of a molecule  $X_2$  that approaches a surface along the trajectory  $z$ .

Fig. 2.11 Schematic representation of hydrogen sensing by MOS sensor

Fig. 3.1 Schematic of PECVD system

Fig. 3.2 Schematic diagram of developed C-V measurement set-up

Fig. 3.3 Standard Mask for gridded gate structure

Fig. 3.4 3-D structure of gridded gate MOS capacitor sensor

Fig.4.1 SEM image of Platinum gate Surface

Fig.4.2 AFM image of Pt gate surface

Fig. 4.3 C-V response of Pt gate MOS sensor for different concentrations of  $H_2$  at  $f=15$  KHz, room temperature

Fig. 4.4 C-V response of Pt gate MOS sensor for different concentrations of  $H_2$  at  $f=25$  KHz, room temperature

Fig. 4.5 C-V response of Pt gate MOS sensor for different concentrations of H<sub>2</sub> at f=50 KHz, room temperature

Fig. 4.6 C-V response of Pt gate MOS sensor for different concentrations of NH<sub>3</sub> at f=15 KHz, room temperature

Fig. 4.7 C-V response of Pt gate MOS sensor for different concentrations of NH<sub>3</sub> at f=25 KHz, room temperature

Fig. 4.8 C-V response of Pt gate MOS sensor for different concentrations of NH<sub>3</sub> at f=50 KHz, room temperature

Fig. 4.9 C-V response of Pt gate MOS sensor for different concentrations of CH<sub>4</sub> at f=25 KHz, room temperature

Fig.4.10 C-V response of Pt gate MOS sensor for different concentrations of H<sub>2</sub>S at f=25 KHz, T=120 °C

Fig.4.11 G-V response of Pt gate MOS sensor for different concentrations of H<sub>2</sub> at f=15 KHz, T=27 °C

Fig.4.12 G-V response of Pt gate MOS sensor for different concentrations of H<sub>2</sub> at f=25 KHz, room temperature

Fig.4.13 G-V response of Pt gate MOS sensor for different concentrations of H<sub>2</sub> at f=50 KHz, room temperature

Fig.4.14 G-V response of Pt gate MOS sensor for different concentrations of NH<sub>3</sub> at f=15 KHz, room temperature

Fig.4.15 G-V response of Pt gate MOS sensor for different concentrations of NH<sub>3</sub> at f=25 KHz, room temperature

Fig.4.16 G-V response of Pt gate MOS sensor for different concentrations of NH<sub>3</sub> at f=50 KHz, room temperature

Fig.4.17 G-V response of Pt gate MOS sensor for different concentrations of CH<sub>4</sub> at f=25 KHz, room temperature

Fig.4.18 G-V response of Pt gate MOS sensor for different concentrations of H<sub>2</sub>S at f=25 KHz, T=120 °C

Fig.4.19 Sensitivity vs Bias voltage of Pt gate MOS sensor for different concentrations of H<sub>2</sub> at f=15 KHz, room temperature

Fig.4.20 Sensitivity vs Bias voltage of Pt gate MOS sensor for different concentrations of H<sub>2</sub> at f=25 KHz, room temperature

Fig.4.21 Sensitivity vs Bias voltage of Pt gate MOS sensor for different concentrations of H<sub>2</sub> at f=50 KHz, room temperature

Fig.4.22 Sensitivity vs Bias voltage of Pt gate MOS sensor for different concentrations of NH<sub>3</sub> at f=15 KHz, room temperature

Fig.4.23 Sensitivity vs Bias voltage of Pt gate MOS sensor for different concentrations of NH<sub>3</sub> at f=25 KHz, room temperature

Fig.4.24 Sensitivity vs Bias voltage of Pt gate MOS sensor for different concentrations of NH<sub>3</sub> at f=50 KHz, room temperature

Fig.4.25 Sensitivity vs Bias voltage of Pt gate MOS sensor for different concentrations of CH<sub>4</sub> at f=25 KHz, room temperature

Fig.4.26 Sensitivity vs Bias voltage of Pt gate MOS sensor for different concentrations of H<sub>2</sub>S at f=25 KHz, 120 °C temperature

Fig. 4.27 Interface Trap charge (N<sub>it</sub>) vs Concentraion of Pt gate MOS sensor for different concentrations of H<sub>2</sub> at f=15KHz, 25 KHz and 50 KHz, room temperature

Fig.4.28 Interface Trap charge (N<sub>it</sub>) vs Concentraion of Pt gate MOS sensor different concentrations of NH<sub>3</sub> at f= 15 KHz, 25 KHz and 50 KHz, room temperature

Fig. 4.29 Interface Trap charge (N<sub>it</sub>) vs Concentraion of Pt gate MOS sensor for different concentrations of CH<sub>4</sub> at f=25KHz, room temperature

Fig. 4.30 Interface Trap charge (N<sub>it</sub>) vs Concentraion of Pt gate MOS sensor for different concentrations of H<sub>2</sub>S at f=25KHz, 120 °C temperature

Fig. 4.31 Illustration of sensing mechanism of (a) ungridded and (b) gridded gate structure

Fig. 4.31(c) Illustration of H<sub>2</sub> detection principal of conventional Pt/SiO<sub>2</sub>/Si MOS sensor

Fig. 4.32 Capacitively coupled model for thin porous catalytic metal film surface for NH<sub>3</sub> sensing

Fig. 4.33 Reaction mechanism of Pt/SiO<sub>2</sub>/Si MOS sensor for H<sub>2</sub>S

Fig. 5.1 3-D structure of plasma treated gridded gate Pt/SiO<sub>2</sub>/Si MOS sensor

Fig. 5.2 (a) AFM images of Non plasma treated SiO<sub>2</sub> film (S1)

Fig. 5.2b AFM image of SiO<sub>2</sub> surfaces treated with O<sub>2</sub> plasma at 40W RF power for 4 minutes (S3)

Fig.5.2c AFM image of SiO<sub>2</sub> surfaces treated with O<sub>2</sub> plasma at 40W RF power for 8 minutes (S4)

Fig.5.2d AFM image of SiO<sub>2</sub> surfaces treated with O<sub>2</sub> plasma at 40W RF power for 12 minutes (S5)

Fig. 5.2e AFM image of SiO<sub>2</sub> surfaces treated with O<sub>2</sub> plasma at 50W RF power for 4 minutes (S7)

Fig. 5.2f AFM image of SiO<sub>2</sub> surface treated with O<sub>2</sub> plasma at 50W RF power for 8 minutes (S8)

Fig. 5.3 C-V response of Non plasma treated gridded gate Pt/SiO<sub>2</sub>/Si MOS sensor (S1) in air at room temperature

Fig. 5.4 C-V response of O<sub>2</sub> RF plasma treated at (40 W, 2 min.) gridded gate Pt/SiO<sub>2</sub>/Si MOS sensor (S2) in air, at room temperature

Fig. 5.5 C-V response of O<sub>2</sub> RF plasma treated at (40 W, 4 min.) gridded gate Pt/SiO<sub>2</sub>/Si MOS sensor (S3) in air, at room temperature

Fig. 5.6 C-V response of O<sub>2</sub> RF plasma treated at (40 W, 8 min.) gridded gate Pt/SiO<sub>2</sub>/Si MOS sensor (S4) in air, at room temperature

Fig. 5.7 C-V response of O<sub>2</sub> RF plasma treated at (40 W, 12 min.) gridded gate Pt/SiO<sub>2</sub>/Si MOS sensor (S5) in air, at room temperature

Fig. 5.8 C-V response of O<sub>2</sub> RF plasma treated at (50 W, 2 min.) gridded gate Pt/SiO<sub>2</sub>/Si MOS sensor (S6) in air, at room temperature

Fig. 5.9 C-V response of O<sub>2</sub> RF plasma treated at (50 W, 4 min.) gridded gate Pt/SiO<sub>2</sub>/Si MOS sensor (S7) in air, at room temperature

Fig. 5.10 C-V response of O<sub>2</sub> RF plasma treated at (50 W, 8 min.) gridded gate Pt/SiO<sub>2</sub>/Si MOS sensor (S8) in air, at room temperature

Fig. 5.11 C-V response of O<sub>2</sub> RF plasma treated at (50 W, 12 min.) gridded gate Pt/SiO<sub>2</sub>/Si MOS sensor (S9) in air, at room temperature

Fig.5.12 Variation of sensitivity vs concentration of Non plasma treated gridded gate Pt/SiO<sub>2</sub>/Si MOS sensor (S1) in air, at room temperature

Fig.5.13 Variation of sensitivity vs concentration of O<sub>2</sub> RF plasma treated at 40 W RF plasma power gridded gate Pt/SiO<sub>2</sub>/Si MOS sensors (S2-S5) for different durations (2 min.,4 min., 8 min. and 12 min.) in air, at room temperature

Fig. 5.14 Variation of sensitivity vs concentration of plasma treated at 50 W RF plasma power gridded gate Pt/SiO<sub>2</sub>/Si MOS sensors (S6-S9) for different durations (2 min., 4 min., 8 min. and 12 min.) in air, at room temperature

Fig. 5.16. Variation of fixed oxide charge density vs concentration of O<sub>2</sub> RF plasma treated at 40 W RF plasma power gridded gate Pt/SiO<sub>2</sub>/Si MOS sensors (S2-S5) for different durations (2min., 4 min., 8 min., and 12 min.) in air at room temperature

Fig. 5.17 Variation of fixed oxide charge density vs concentrations of O<sub>2</sub> RF plasma treated at 50 W RF plasma power gridded gate Pt/SiO<sub>2</sub>/Si MOS sensors (S6-S9) for different durations (2min., 4 min., 8 min., and 12 min.) in air, at room temperature
