

Preface	i-viii
Chapter I: Introduction and Literature Review	1-51
1.1 Introduction.....	2
1.2 General description of the perovskite structure.....	2
1.3 Ferromagnetic and antiferromagnetic materials.....	5
1.4 Magnetic exchange interactions.....	9
1.4.1 Direct exchange interaction.....	9
1.4.2 Indirect exchange interaction.....	10
1.4.3 Super exchange interaction.....	10
1.4.4 Double exchange interaction.....	11
1.4.5 Anisotropic superexchange interaction.....	12
1.5 Ferroelectricity and Antiferroelectricity.....	14
1.6 Magnetoelectric coupling in multiferroics.....	16
1.7 Incompatibility between ferroelectricity and magnetism.....	17
1.8 Approaches to the co-existence of the ferroelectricity and magnetism.....	18
1.8.1 Mixing of the magnetic TM ions (d^n) with ferroelectrically active TM (d^0) ions.....	18
1.8.2 Ferroelectricity induced by lone-pair electrons.....	19
1.9 Multiferroic materials with improper ferroelectricity.....	19
1.9.1 Geometric ferroelectricity in Hexagonal manganites.....	20
1.9.2 Ferroelectricity in charge order system.....	22
1.9.3 Spiral spin order induced ferroelectricity.....	23
1.10 Structure and multiferroic properties of BiFeO_3	24
1.11 Electric field induced spin-flop in BiFeO_3	30
1.12 High temperature β and γ phases of BiFeO_3	34
1.13 Magnetoelectric coupling in BiFeO_3	36

1.13.1 Application of the high magnetic field.....	37
1.13.2 By controlling the particle size of BF.....	38
1.13.3 Thin films of BF.....	39
1.13.4 Doping effects in BF.....	40
1.14 Structure and multiferroic properties of $\text{Pb}(\text{Fe}_{0.5}\text{Nb}_{0.5})\text{O}_3$	42
1.15 Solid solutions of BiFeO_3 with $\text{Pb}(\text{Fe}_{1/2}\text{Nb}_{1/2})\text{O}_3$	44
1.15.1 Room temperature structure, dielectric and magnetic properties of BF-xPFN with composition.....	44
1.15.2 Ferroelectric and magnetic phase transitions studies in BF-xPFN.....	47
1.16 Objectives of the present work.....	51
Chapter II: Synthesis of Phase Pure (1-x)BiFeO_3-x$\text{Pb}(\text{Fe}_{0.5}\text{Nb}_{0.5})\text{O}_3$ (BF-xPFN) Ceramics.....	52-65
2.1 Introduction.....	53
2.2 Characterization tools.....	54
2.3 Synthesis of (1-x) BiFeO_3 -x $\text{Pb}(\text{Fe}_{0.5}\text{Nb}_{0.5})\text{O}_3$ (BF-xPFN).....	54
2.3.1 Precursors.....	54
2.3.2 Mixing and milling.....	55
2.3.3 Calcinations.....	55
2.3.4 Preparation of Green Pellets.....	59
2.3.5 Sintering.....	62
2.4 Conclusion.....	65
Chapter III: Room Temperature Structural Studies Using Laboratory Source X-ray Powder Diffraction Data...66-92	
3.1 Introduction.....	67
3.2 Experimental.....	68
3.3 Introduction to Rietveld refinement method.....	69
3.4 Rietveld refinement details of BF-xPFN.....	71
3.5 Results and discussion.....	73

3.5.1 Structural evidence for two morphotropic phase transitions...	73
3.5.2 Rietveld refinement of the structure of BF-xPFN for $0.1 \leq x \leq 0.32$	79
3.5.3 Rietveld refinement for the MPB region of BF-xPFN with $0.32 < x < 0.40$	81
3.5.4 Rietveld refinement of BF-xPFN for $0.40 \leq x \leq 0.90$	83
3.5.5 Rietveld refinement of monoclinic phase with Cm space group of BF-PFN for the $0.90 < x \leq 1.0$	87
3.5.6 Variation of structural parameters with compositions.....	88
3.6 Summary and conclusion.....	91

Chapter IV: Structural Studies Using Synchrotron X-ray Powder Diffraction Data and its Correlation with Dielectric Properties.....93-128

4.1 Introduction.....	94
4.2 Experimental.....	95
4.3 Results and discussion.....	96
4.3.1 Evolution of synchrotron x-ray diffraction profiles with composition.....	96
4.3.2 Evidence for ferroelectric transition in dielectric measurements.....	100
4.3.3 Rietveld Refinement of different crystallographic phases of BF-xPFN.....	102
4.3.3.1 Rietveld refinement of BF-0.3PFN.....	102
4.3.3.2 Rietveld refinement of BF-xPFN for $0.40 \leq x \leq 0.70$	103
4.3.3.3 Local structure ‘cubic’ phase of BF-0.4PFN.....	107
4.3.3.4 Local structure of BF-0.80PFN.....	111
4.3.4 Variation of local displacement of $\text{Bi}^{3+}/\text{Pb}^{2+}$ & O^{2-} with x.....	116
4.3.5 Implications of local disorder of O^{2-} and $\text{Bi}^{3+}/\text{Pb}^{2+}$	120
4.3.5.1 Local oxygen octahedral tilt.....	120
4.3.5.2 Ferroelectric polarization due to local $\text{Bi}^{3+}/\text{Pb}^{2+}$ disorder.....	121

4.3.5.3 Local monoclinic distortion of M_A -type and rotation of polarization vector.....	121
4.3.5.4 Variation of the structural parameters with composition..	124
4.3.6 Evidence for morphotropic phase boundaries (MPBs): room temperature dielectric study.....	126
4.4 Summary and conclusions.....	128

Chapter V: High Temperature Ferroelectric Phase Transition in BF-0.2PFN Solid Solutions.....129-150

5.1 Introduction.....	130
5.2 Experimental details.....	133
5.3 Results.....	134
5.3.1 Room temperature Rietveld refinement of BF-0.2PFN.....	134
5.3.2 Evolution of the x-ray diffraction profile with temperature.....	134
5.3.3 Rietveld refinement of the high temperature x-ray diffraction pattern: (Evidence for the first order phase transition).....	137
5.4 Discussion.....	146
5.5 Summary and conclusions.....	149

Chapter VI: High Temperature Ferroelectric Phase Transition in BF-0.2PFN: A Neutron Powder Diffraction Study...151-165

6.1 Neutron powder diffraction study.....	152
6.2 Experimental.....	153
6.3 Evolution of neutron powder diffraction patterns of BF-0.2PFN with temperature.....	153
6.4 Rietveld analysis of the neutron powder diffraction pattern..	157
6.5 Unit cell parameters, polarization and tilt angle.....	162
6.6 Summary and conclusions.....	164

Chapter VII: Magnetic Behaviour and Magnetic Structure

.....	166-207
7.1 Introduction.....	167
7.2 Experimental.....	168
7.3 Rietveld refinement of neutron powder diffraction data: Magnetic structure refinement.....	169
7.4 Results and discussion.....	170
7.4.1 Magnetic behavior of BF-xPFN at room temperature	170
7.4.2 Room temperature magnetic structure of BF-xPFN.....	175
7.4.3 Magnetic structure of the rhombohedral phase (0.10≤x≤0.32).....	177
7.4.4 Magnetic structure of the cubic like phase for (0.40≤x<0.80).....	185
7.4.5 Magnetic structure of the cubic like phase for (0.80≤x<0.90).....	189
7.4.6 Rietveld refinement of the nuclear structure of BF-0.9PFN at room temperature	192
7.4.7 Variation of magnetic moment of Fe in BF-xPFN as a function of x	193
7.4.8 Temperature dependent magnetization (M-T) measurements	195
7.4.9 Correlation between weak ferromagnetism and crystal structure parameters	201
7.5 Summary and conclusion.....	206

Chapter VIII: Evidence for Isostructural Phase Transition and Linear Magnetoelectric Coupling in Multiferroic (Bi_{0.8}Pb_{0.2})(Fe_{0.9}Nb_{0.1})O₃ Solid Solution.....

.....	208-231
8.1 Introduction.....	209
8.2 Experimental.....	213
8.3 Results and discussion.....	214
8.3.1 Magnetisation and calorimetric studies.....	214

8.3.2 Evidence for Magnetoelastic coupling: x-ray powder diffraction studies.....	216
8.3.3 Evidence for magnetoelectric coupling: dielectric studies.....	219
8.3.4 Neutron Powder Diffraction Studies.....	221
8.3.4.1 Evolution of the neutron powder diffraction profiles across T_N	221
8.3.4.2 Magnetic Structure of the Antiferromagnetic Phase...	224
8.3.4.3 Critical exponent at magnetic phase transition.....	225
8.3.4.4 Evidence for isostructural phase transition across T_N ..	226
8.3.4.5 Study of the magnetoelectric coupling at the atomic level: Evidence for linear magnetoelectric coupling.....	226
8.4 Summary and Conclusions.....	231
Chapter IX: Phase Diagram, Summary of the Work and Suggestions for Future work.....	232-240
9.1 Phase diagram of the BF-xPFN solid solution system.....	233
9.2 Summary of the work.....	235
9.3 Suggestions for the future work.....	240
References.....	241-261
