
List of Tables

Table 2.1 Processes for making ceramic foams	14
Table 4.1 Manufacturer specified specifications of sucrose	34
Table 4.2 List of compositions used in the present study	34
Table 5.1 List of selected compositions (wt% basis) for fabrication of porous alumina ceramics using rice husk	51
Table 5.2 Different mixture compositions and the corresponding bulk density of fabricated green alumina samples	59
Table 5.3 Different mixture compositions, the corresponding green density, % linear firing shrinkage and sintered density of fabricated porous alumina samples	63
Table 5.4 Crystal structures and lattice parameters of mullite and α - Al_2O_3	64
Table 6.1 Different mixture compositions, the corresponding total porosity, open porosity, average pore size from SEM, interconnection of fabricated porous alumina sample	72
Table 6.2 Comparison of σ_o and β values of porous alumina ceramics fabricated through different processes	78
Table 7.1 Experimental and predicted (EMT) thermal conductivity of porous alumina compacts fabricated using (a) 10, (b) 20, (c) 30 and (d) 40 wt% RH (75-180) μm average size	92
Table 7.2 Experimental and predicted (EMT) thermal conductivity of porous alumina compacts fabricated using 20 wt% RH powder with (a) < 75 (b) 75-180 (c) 180-355 (d) 355-420 and (e) 420-600 μm size	93
Table 8.1 Variation of dielectric constant of porous alumina samples as a function of porosity and pore size at different temperatures	114
Table 8.2 Variation of loss tangent of porous alumina samples as a function of porosity and pore size at different Temperatures	123
Table 9.1 List of selected sample compositions (wt% basis) for permeability measurement	134
Table 9.2 Variation of (a) Darcian permeability k_1 and (b) non-Darcian permeability k_2 with pore size of porous alumina compacts	138
