

List of Tables

Table No.		Page No.
1.1	Physical properties of Zinc Oxide	10
2.1	Temperature-dependent electrical parameters of different ZnO based Schottky diodes by taking phenomenon of barrier inhomogeneity into account	55
2.2	The comparison of UV detection properties for ZnO based various device structures	65
2.3	Highlighting the recent results on temperature dependent electrical characteristics of n-ZnO/p-Si Heterojunction Diodes	72
3.1	Shows different electrical parameters of Pd/ZnO Schottky diode grown on n-Si substrates by using different methods.	98
3.2	Calculation of reverse saturation current, barrier height, and ideality factor for the Pd/n-ZnO thin film Schottky diode grown on n-Si substrates	100
4.1	Lattice mismatching between ZnO and substrate materials	116
4.2	Different electrical parameters of Pd/ZnO thin film Schottky diodes grown on n-Si substrates with and without ZnO seed layer	121
4.3	Comparison of various electrical parameters of Pd/ZnO Schottky diodes grown on n-Si substrates with Sn and Zn metal seed layers	128
5.1	Comparison of different UV detection parameter of ZnO based various device structures with present study	142
6.1	Temperature-dependent electrical parameters of n-ZnONWs/p-Si heterojunction diode with temperature range from 300 to 423K	158
