CONTENTS

List of Figures and Tables **[i-iv]**

Preface **[v-viii]**

Chapter 1: Introduction **[1-31]**

1.1. **Definitions of Multiferroics**

1.2. A brief review on historical background of Multiferroics

1.3. Types of Multiferroic materials

1.3.1. **Type I Multiferroics**

1.3.1.1. Origin of ferroelectricity due to d^0-ness condition

1.3.1.2. Origin of ferroelectricity due to lone pair

1.3.1.3. Ferroelectricity due to charge Ordering

1.3.1.4. Geometrical ferroelectricity

1.3.2. **Type II Multiferroics**

1.3.2.1. Ferroelectricity due to spiral Magnetism

1.3.2.2. Ginzburg-Landau theory (GL)

1.3.2.3. Inverse D-M (Dzyaloshinskii-Moriya) Interaction (Microscopic theory)

1.3.2.4. Theory of Katsura, Nagaosa, Balatsky (KNB-Model)

1.3.2.5. Perovskites Materials

1.3.2.6. Normal and Inverse Spinel Structure

1.3.2.7. **Quantum spin System**

1.3.2.7.1. Role of Quantum magnetism in condensed Matter Physics

1.3.2.7.2. Low Dimensional Quantum magnetism

1.3.2.7.3. Fundamental Importance and Physical significance of Low dimensional System

1.3.2.7.4. Low Dimensional (1D) Magnetism a bridge between Theoretical and Experimental Research

1.3.2.7.5. Examples of 1D (low-dimensional system) magnet

1.3.2.7.5.1. $LiCuVO_4$ behaves as quasi-one dimensional quantum magnet

References

Chapter 2: Experimental: Synthesis Procedure and Characterization Techniques [32-40]

2.1 **Sample Synthesis**

2.1.1 Solid State Reaction Technique

2.2 **Experimental Techniques & Their Working Principle**

2.2.1 X- ray Diffraction

2.2.2 Neutron Diffraction

2.2.3 Superconducting Quantum Interference Device (SQUID)-Magnetometer

2.2.4 X-ray Photoemission Spectroscopy (XPS)

2.2.5 Raman Spectroscopy

2.2.6 Swift Heavy Ion Beam Irradiation (SHI)

Chapter 3: Structural and Magnetic Properties of quasi-one dimensional doped $LiCuVO_4$. [41-59]

3.1 Introduction

3.2 Experimental

3.3 Results & Discussion

3.3.1 X-Ray Diffraction Study

3.3.2 Study of Magnetic Property

3.3.2.1 Analysis of Magnetization (M) Vs Temperature (T)

3.3.2.2 Modified Curie-Weiss (MCW) Fitting Analysis

3.3.2.3 High-Temperature Series expansion (HTSE) Analysis of the Magnetic Susceptibility

3.3.2.4 Analysis of Magnetization (M) as function of Magnetic field (H) and $\chi(T)*T$ Product as Function of Temperature

3.3.3 Neutron Diffraction Study

3.3.4 XPS (X-ray Photoemission Spectra) Study

3.4 Conclusions

References

Chapter 4: Role of Ion Beam Excitations on Quasi One-Dimensional Magnetic system of Mn-doped $LiCuVO_4$. [60-78]

4.1 Introduction

4.2 Experimental

4.3 Results and Discussion

4.3.1 X-ray Diffraction Study

4.3.2 Jahn-Teller Distortion

4.3.3 Raman Spectroscopy Study
4.3.4 Magnetization Measurements
4.4 Conclusion
References

Chapter 5: Raman Effect and Magnetic Properties of doped $TbMnO_3$. [79-93]

5.1 Introduction
5.2 Experimental
5.3 Results and Discussion
5.3.1 X-Ray Diffraction Study
5.3.2 Analysis of Magnetic Properties
5.3.3 Raman Spectrum Study
5.4 Conclusion
References

Chapter 6: Existence of Exchange bias and Griffith Phase in $(Tb_{1-x}Ce_x)MnO_3$. [94-101]

6.1 Introduction
6.2 Experimental
6.3 Result and Discussion
6.4 Conclusion
References

Chapter 7: Conclusion of the Thesis [102-103]
