List of Tables	xxvi
Symbols used	xxviii
Preface	xxix
Chapter 1 : Introduction	**1-6**
1.1 Problem Statement	1
1.2 Cholesterol oxidase: an overview	3
1.3 Rationale of the study	5
Chapter 2 : Literature Review	**7-25**
2.1 Overview	7
2.2 Sources of Cholesterol oxidase	7
2.3 *Streptomyces* Cholesterol oxidase	8
2.4 Mechanism of Cholesterol oxidase Action	9
2.5 Flavoenzyme - The Role of Flavin Moiety in Catalysis	9
2.6 Forms of Cholesterol oxidase	11
2.6.1 Type - I Cholesterol oxidase	11
2.6.2 Type - II Cholesterol oxidase	12
2.7 Applications of Cholesterol oxidase	12
2.7.1 Diagnosis	12
2.7.2 Insecticidal Agent	13
2.7.3 Analysis of the sterol content in foods	13
2.7.4 Transformation of steroids	13
2.7.5 Other applications	13
2.8 Microbial Sources of Cholesterol oxidase	14
2.9 Fermentative Production of Cholesterol oxidase	17
2.10 Purification of Cholesterol oxidase	18
2.10.1 Partitioning in Aqueous Two Phase System	18

2.11 Properties of Cholesterol oxidase From Different Sources 20
2.11.1 pH and Temperature Optima and Stability Profiles of Cholesterol oxidase 21
2.11.2 Effect of metal ions and chemical reagents 21
2.11.3 Effect of detergents 22
2.11.4 Effect of organic solvents 23
2.12 Commercial availability 24
Chapter : 3 Selection of Microorganism for Cholesterol oxidase Production and Optimization of Enzyme Assay Parameters **26-49**
3.1 Overview 26
3.2 Experimental 29
3.2.1 Chemicals used 29
3.2.2 Microorganisms and Growth media 29
3.2.3 Medium Components and Culture Conditions 30
3.2.4 Estimation of Cholesterol oxidase activity 30
3.2.5 Protein Estimation by Bradford's Method 31
3.2.6 Estimation of extracellular and cell bound Cholesterol oxidase activity 32
3.2.7 Optimization of Cholesterol oxidase Assay parameters using Response Surface Methodology 32
3.2.8 Artificial Neural Network Modeling 34
3.3 Results and Discussion 38
3.3.1 Selection of potent microorganism for Cholesterol oxidase production 38
3.3.2 Releasing of extracellular Cholesterol oxidase 40
3.3.3 Optimization of Assay parameters using Response Surface Methodology 41
3.3.3.1 Statistical Analysis by ANOVA 42
3.3.3.2 Contour Plots 44
3.3.4 ANN Modeling 46
3.4 Conclusion 49
Chapter : 4 Optimization of Process Parameters and Medium Components for Cholesterol oxidase Production **50-81**
4.1 Overview 50
4.2 Experimental 52
4.2.1 Chemicals used 52
4.2.2 Microorganism and Culture Conditions 52

4.2.3 Fermentation Conditions 53
4.2.4 Enzyme Assay 54
4.2.5 Estimation of cell biomass 54
4.2.6 Preliminary studies for the production of Cholesterol oxidase 55
4.2.7 Effect of nutrients on Cholesterol oxidase production 55
4.2.7.1 Effect of different carbon and nitrogen sources 55
4.2.7.2 Effect of surfactants 56
4.2.7.3 Effect of cholesterol as inducer 56
4.2.8 Optimization of culture conditions using RSM and ANN methodology 56
4.2.8.1 Experimental design 56
4.2.8.2 ANN modeling 61
4.2.8.3 Evaluation of model predictability 62
4.2.8.4 Performance evaluation of RSM and ANN models 63
4.3 Results and Discussion 64
4.3.1Fermentation profile 64
4.3.2 Effect of nutrients on Cholesterol oxidase production 66
4.3.2.1 Effect of different carbon and nitrogen sources 66
4.3.2.2 Effect of surfactants 69
4.3.2.3 Effect of inducer concentration 70
4.3.3 Optimization of culture conditions 71
4.3.3.1Response surface regression model for Cholesterol oxidase production by RSM 71
4.3.3.2 Statistical analysis by ANOVA 72
4.3.3.3 Contour plots 74
4.3.3.4 ANN Modeling 78
4.3.3.5 Performance evaluation of RSM and ANN models 79
4.3.3.6 Experimental validation of the model 81
4.4 Conclusion 81

82-100

Chapter : 5 Partitioning of Cholesterol oxidase in Different PEG-Salt-Water Aqueous Two Phase Systems

5.1 Overview 82

5.2 Experimental 84
5.2.1 Chemicals used 84
5.2.2 Crude extract of Cholesterol oxidase 84
5.2.3 Enzyme Assay 84
5.2.4 Protein Determination 85
5.2.5 Preparation of Phase Diagram 85
5.2.6 Partitioning of Cholesterol oxidase in different PEG-Salt-Water ATPS 86
5.2.6.1 Partition Coefficient 87
5.2.6.2 Yield and Specific Activity 87
5.2.7 Determination of molecular weight by gel electrophoresis 87
5.3 Results and Discussion 88
5.3.1 Binodal Curve 88
5.3.2 Partition coefficient 90
5.3.3 Effect of PEG molecular weight on partitioning of Cholesterol oxidase 91
5.3.4 Effect of phase-volume ratio on partitioning of Cholesterol oxidase in PEG 4000-ammomonium sulfate-water system 92
5.3.5 Yield, Specific activity and Purification fold 94
5.3.6 Determination of molecular weight by gel electrophoresis 95
5.3.7 Comparison of aqueous-two phase technology with other method of Cholesterol oxidase purification 97
5.4 Conclusion 100
Chapter : 6 Physicochemical Properties of Partitioned Cholesterol oxidase 101-122
6.1 Overview 101
6.2 Experimental 102
6.2.1 Chemicals used 102
6.2.2 Preparation of purified Cholesterol oxidase sample 102
6.2.3 Enzyme assay 103
6.2.4 Protein determination 104
6.2.5 Studies of the physiochemical properties of partitioned cholesterol oxidase 104
6.2.5.1 Effect of pH on activity of Cholesterol oxidase 104
6.2.5.2 Effect of temperature on activity of Cholesterol oxidase 104

6.2.5.3 Effect of substrate concentration 105
6.2.6 Stability Studies 105
6.2.6.1 pH stability 105
6.2.6.2 Thermo-stability 105
6.2.6.3 Effect of organic solvents and detergents 106
6.2.6.4 Effect of denaturant and chelating agent 107
6.2.6.5 Effect of metal ions on Cholesterol oxidase activity 107
6.3 Results and Discussion 107
6.3.1 Physicochemical properties of partitioned Cholesterol oxidase 107
6.3.1.1 pH optima 107
6.3.1.2 Temperature optima 108
6.3.1.3 Effect of substrate concentration on the reaction velocity 109
6.3.2 Stability studies of purified Cholesterol oxidase 112
6.3.2.1 pH stability 113
6.3.2.2 Thermo-stability 113
6.3.2.3 Effect of organic solvents 115
6.3.2.4 Effect of detergents 118
6.3.2.5 Chelating agent and denaturants 120
6.3.2.6 Effect of metal ions 121
6.4 Conclusion 122
Chapter : 7 Immobilization of Horseradish Peroxidase on Graphene Oxide Coated Magnetic Chitosan Beads for Application in Cholesterol oxidase Assay **123-148**
7.1 Overview 123
7.2 Experimental 125
7.2.1 Chemicals Used 125
7.2.2 Preparation of Magnetic Nanoparticles 125
7.2.3 Preparation of Magnetic Chitosan Beads 126
7.2.4 Coating Graphene Oxide on Magnetic Chitosan Beads 126
7.2.5 Immobilization of HRP on GO coated Magnetic Chitosan Beads 127
7.2.6 Characterization of the HRP loaded Magnetic Chitosan Beads 128
7.2.7 Activity assay of Free and Immobilized 128

HRP
7.2.8 Application of PGOMC Beads for Cholesterol Oxidase assay 129
7.2.9 Properties of Immobilized HRP 130
7.2.9.1 Effect of pH 130
7.2.9.2 Effect of Temperature 131
7.2.9.3 Thermo-stability 131
7.2.9.4 Effect of metal ions 131
7.2.9.5 Stability in various detergents and organic solvents 132
7.2.9.6 Reusability and Storage Stability of the Immobilized HRP 132
7.3 Results and Discussion 132
7.3.1 Immobilization 132
7.3.2 Characterization of Immobilized HRP with Carrier Support 133
7.3.2.1 SEM 133
7.3.2.2 FT-IR Analysis 135
7.3.2.3 X-ray Diffraction 136
7.3.2.4 Vibrating Sample Magnetometer (VSM) measurements 137
7.3.3 Properties of Immobilized HRP 138
7.3.3.1 Effect of pH on free and immobilized HRP 138
7.3.3.2 Effect of temperature on free and immobilized HRP 140
7.3.3.3 Thermo-stability 141
7.3.3.4 Effect of detergents, organic solvents, and metal ions 142
7.3.4 Reusability of Immobilized HRP 145
7.3.5 Storage stability 146
7.4 Conclusion 148
Chapter : 8 Application of Cholesterol oxidase Immobilized Chitosan Beads For Estimation of Serum Cholesterol **149-159**
8.1 Overview 149
8.2 Experimental 150
8.2.1 Chemicals used 150
8.2.2 Preparation of glutaraldehyde treated chitosan beads 150
8.2.3 Recovery of Cholesterol oxidase from top phase of ATPS through immobilization onto chitosan beads 151

8.2.4 Estimation of Cholesterol oxidase activity in Cholesterol oxidase immobilized chitosan beads 153
8.2.5 Application of Cholesterol oxidase loaded chitosan beads for serum cholesterol assay 153
8.2.5.1 Methodology 153
8.2.5.2 Reagents used 154
8.2.5.3 Sample collection 154
8.2.5.4 Optimization of Cholesterol oxidase concentration and linearity assessment 155
8.3 Results and Discussion 155
8.3.1 Cholesterol oxidase recovery and immobilization efficiency 155
8.3.2 Serum assay 157
8.3.2.1 Optimization of cholesterol oxidase and linearity assessment 157
8.4 Conclusion 159
Chapter : 9 Conclusion **160-166**
