

CERTIFICATE

It is certified that the work contained in this thesis titled "*A STUDY OF TOPOLOGICAL INDICES AND THEIR BOUNDS WITH APPLICATIONS TO MOLECULAR GRAPHS*" by *Abhay Rajpoot* has been carried out under my supervision and that this work has not been submitted elsewhere for a degree.

It is further certified that the student has fulfilled all the requirements of Comprehensive Examination, Candidacy and SOTA for the award of Ph.D. degree.

Dr. Lavanya Selvaganesh
Supervisor

Assistant Professor
Department of Mathematical Sciences
Indian Institute of Technology
(Banaras Hindu University)
Varanasi-221005

DECLARATION BY THE CANDIDATE

I, **Abhay Rajpoot**, certify that the work embodied in this thesis is my own bonafide work and carried out by me under the supervision of **Dr. Lavanya Selvaganesh** from **July 2017** to **July 2022** at the **Department of Mathematical Sciences, Indian Institute of Technology (Banaras Hindu University), Varanasi**. The matter embodied in this thesis has not been submitted for the award of any other degree/diploma. I declare that I have faithfully acknowledged and given credits to the research workers wherever their works have been cited in my work in this thesis. I further declare that I have not willfully copied any other's work, paragraphs, text, data, results, *etc.*, reported in journals, books, magazines, reports dissertations, theses, *etc.*, or available at websites and have not included them in this thesis and have not cited as my own work.

Date: 12.07.2022

Place: Varanasi

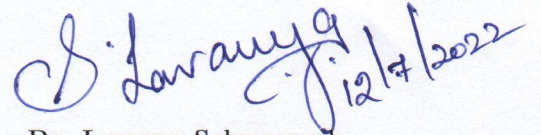

Abhay Rajpoot

Roll No. 17121013

CERTIFICATE BY THE SUPERVISOR

It is certified that the above statement made by the student is correct to the best of my/our knowledge.

Dr. Lavanya Selvaganesh

Supervisor

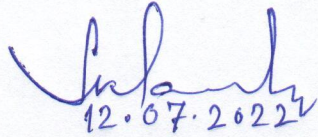

Assistant Professor

ACKNOWLEDGEMENTS

My Ph.D. journey was full of unforgettable times with many ups and downs accompanied by hardship, encouragement, and trust. There are many people who have helped me a lot along this way. It is not possible to say thanks in a few words. Still, I would like to take this opportunity to express my deepest gratitude for their support, love, and affection.

First of all, I would like to express my sincere thanks to my respected supervisor, **Dr. Lavanya Selvaganesh, Assistant Professor, Department of Mathematical Sciences, IIT(BHU), Varanasi**, for her excellent guidance, continuous encouragement, patience, and advice during the period of my Ph.D. program. I have been fortunate to have such a supervisor who cared so much about my work, shaped my understanding of the subject, and gave me the confidence to work independently. I will not forget those enjoyable and illuminating discussions with her at every stage of my writing that always turned out to be several long hours and led me to complete this thesis. She has also supported me in improving my overall personality as a researcher.

Besides my supervisor, I would like to express my deep sense of gratitude to my RPEC members **Prof. S. K. Pandey, Head, Department of Mathematical Sciences** and **Dr. Ravi Shankar Singh, Associate Professor, Department of Computer Science and Engineering**, for their guidance, discussion, ideas, feedback, and motivation during this period.

I want to extend my thanks to **Prof. T. Som, former Head of Department, Prof. L.P. Singh, former Head of Department, Prof. Subir Das, and Dr. Vineet Kumar, Convener, DPGC of Department** for their support throughout my research work. I also express my deepest gratitude to all faculty members of the department for their time-to-time discussion and encouragement.

I express my cordial thanks to **Mr. Selvaganesh** for discussions, suggestions, and encouragement that have immensely helped my research. I have no hesitation in saying that he always helped me as a friend.

I am sincerely thankful to my seniors **Dr. Sumit, Dr. Anil Kumar Shukla, Dr. Om Namha Shivay, Mr. Harendra Kumar, Dr. Rahul Maurya, Dr. Ram Surat Chauhan** for helping me a lot like a brother. I also give my thanks to **Mr. Ajay Kumar, Mr. Ajay Kumar Patel, Ms. Jesmina Pervin**, who, despite time constraints, has selflessly put in so much time and effort to help claim my results as well as to spearhead my analysis.

I have very special thanks to my friends *Mr. Robin Vikram Singh, Mr. Abhishek Kumar, Mr. Shobhit Kumar, Mr. Mahesh Sharan, Dr. Sachin Kumar, Dr. Prashant Kumar Pandey, Mr. Prasant Pandey, Mr. Gagan Kumar Tamrakar, Mr. Jauny, Mr. Jay Singh Maurya, Mr. Gulab Patel, Ms. Pragya Shukla, Mr. Rahul Chaturvedi, Ms. Diksha Gupta, Dr. Harshita, Ms. Sonal Gupta, Mr. Shiv Kumar, Mr. Sidharth Singh* for their moral supports. I thank all the research scholars of the department for their cooperative and friendly behavior towards me. Further, I would like to extend my special thanks to my close friend *Ms. Nidhi Sharma* for their continued encouragement, help and criticism.

I am thankful to my institution, *Indian Institute of Technology (BHU), Varanasi*, for providing all necessary resources throughout my research. I am also thankful to all non-teaching staff members of the department for their cooperation and help throughout my research tenure. I further gratefully acknowledge *University Grant Commission (UGC), India*, for providing me the full financial support to carry out my research work.

I express my sincere and cordial gratitude to my father *Shri Ram Autar*, my mother, *Mrs. Raja Beti*, my elder sisters, *Mrs. Rama Rajput, Mrs. Manju Rajput, Mrs. Meena Rajput, Mrs. Shashi Rajput* and brother in law *Mr. Surendra Rajput, Mr. Arvindra Rajput, Mr. Ved Prakash Rajput, Mr. Prashant Rajput*, and my younger brother *Mr. Saurabh Rajput* and his wife *Mrs. Kalpna Rajput*, who always stood by my decisions and provided all kinds of support, particularly moral and financial. Their love, care, and patience encouraged me to move on.

This acknowledgment would be incomplete if the name of great visionary *Pt. Madan Mohan Malaviya* is not mentioned, who made this divine center of knowledge. Deepest regards to him.

Above all, praises and thanks to the God, the Almighty, for his showers of blessings throughout my research work, who has made everything possible.

PREFACE

In the study of theoretical chemistry, the extensive focus of researchers has been to establish relationships between a substance's chemical and physical properties, and the structure of the corresponding molecules. It is, therefore, not an exaggeration to say that theoretical chemistry has benefited a lot during the past 50 years from applying graph-theoretic [1, 2] and information-theoretic techniques [3, 4] to characterize molecular structures. The modeling of a chemical structure and its physical property led to the evolution of a new branch of mathematical chemistry called "Chemical Graph Theory(CGT)". Broadly, CGT uses graph theory and statistics to identify structural features involved in structure-property activity relationships. Further, the topological characterization of chemical structures allows the classification of molecules and modeling unknown structures with desired properties. Partitioning a molecular property and recombining its fragmental values by additive models remains one of the main tasks here.

The objective of this thesis is three-fold: We consider the mathematical, computational, and application-oriented analysis of vertex-degree-based indices. The main objective of the thesis is that we propose a few novel indices based on distance and degree, study their behavior to analyze if they can serve as a potentially suitable molecular descriptor. If, suppose we can construct at least one topological index that produces a good, or even a reasonable correlation with at least a single molecule property, then, in that case, it will be a significant achievement in structure-property-activity studies. Additionally, while proposing a new topological index, it is vital to assess the capacity of the index to distinguish the molecules within the considered group. Such an assessment is alternatively referred to as the degeneracy analysis or the study of discriminating ability. A molecular graph having a perfect matching plays a crucial role in the analysis of the resonance energy and stability of the molecules. In this thesis, we investigate the bounds of topological indices, especially for reformulated second Zagreb index and symmetric division deg index, of graphs with the cyclomatic number at most three. Also, we construct some new topological indices and compare these indices with well-studied VDB indices. The thesis is mainly divided into seven chapters. The outline of the thesis is as follows:

Firstly, we determine the bounds of the second reformulated Zagreb index for special graph classes: trees, unicyclic graphs, bicyclic graphs, and tricyclic graphs. To study the bounds for these graphs, we propose to use certain transformations that help us obtain the required results. Further, we also find the extremal graphs which attain these bounds.

Next, we determine the sequence of lower bounds of *SDD* index for trees, unicyclic graphs, and bicyclic graphs that have a perfect matching. We also compute an upper bound of the *SDD* index for trees, unicyclic graphs, and bicyclic graphs with a maximum degree of four, which admits a perfect matching.

We study the extremal values of the *SDD* index for molecular graphs, that is, the upper bound and lower bound for the *SDD* index. We also give tight bounds by presenting the extremal graphs that attain the first four lower bounds of *SDD* index for trees, unicyclic, and bicyclic graphs with maximum degree 4 that admits perfect matching. Also, we identify those graphs that attain the upper bounds of these trees, unicyclic and bicyclic graphs with a maximum degree of four, which admits a perfect matching.

From the application perspective, next we focus on the predictive power of the *SDD* index. Here we analyze the *SDD* index against the physicochemical properties such as the melting point (*MP*), octanol-water partition coefficient (*logP*), log Henry constant (*logH*), log water solubility (*logSw*), and relative enthalpy of formation (*dHf*) of PolyChloroBiphenyl congeners. Further, we compare the *SDD* index with the other well-studied VDB indices, such as *ZM*₁, *ZM*₂, *R*, *AZI*, *H*, and *ISI*. Based on the highest correlation values, we have also predicted the values for two properties of PCB congeners whose experimental values were not available.

From the computational perspective, we use the concept of *M-polynomial* and show how to compute the degree-based indices such as Forgotten index, Reduced Second Zagreb index, Sigma index, Hyper-Zagreb index, and Albertson index directly. In addition, we present as an application how to quickly and effectively compute these degree-based topological indices using *M-polynomial* for carbon nanotube structures, *HC*₅*C*₇[*p, q*], *SC*₅*C*₇[*p, q*] and *VC*₅*C*₇[*p, q*]. Finally, we see that by the application of *M-polynomial* we can reduce drastically the computational effort required to compute most of the degree-based topological indices.

Finally, we achieve our main objective of proposing novel descriptors, where we construct 8 novel topological indices, denoted by *AL*₁, *AL*₂, *AL*₃, *AL*₄, *AL*₅, *AL*₆, *AL*₇ and *AL*₈. We give a method to compute these indices from a neighborhood matrix of graphs. To establish our aim, we study the proposed indices' discriminating ability and perform correlation and regression analysis using the widely available datasets on the physicochemical properties of the octane isomers and *PCB* congeners. Further, we also make a comparative study with a few existing *VDB* indices to establish the potentiality and use them to predict expected values of the properties for *PCB* congeners.
