List of Figures	xvi
Preface	xix
1 Introduction	1
1.1 Cosmology	1
1.2 General Theory of Relativity	3
1.2.1 Perfect Fluid Distribution	6
1.2.2 Perfect Fluid Distribution with Heat Conduction	6
1.2.3 Viscous Fluid Distribution	7
1.3 Homogeneous and Isotropic Universe	7
1.4 Cosmological Models	8
1.5 Homogeneous and Anisotropic Universe	10
1.6 Lyra's Geometry	12
1.7 Saez-Ballester Theory	14

1.8	Big- Bang Cosmology	15
1.9	Topological Defects: Cosmic String	16
1.10	Dark Matter and Dark Energy	18
1.11	Cosmologies with Varying G and Λ	21
1.12	$f(R)$ and $f(R, T)$ Theories of Gravitation	23
1.13	Phases of the Universe	27
1.13.1	Inflationary Phase	27
1.13.2	Radiation-Dominated Phase	29
1.13.3	Matter-dominated Phase	29
1.13.4	Vacuum Energy Dominated Phase	30
1.14	Cosmological Parameters	30
1.14.1	Hubble parameter	31
1.14.2	Deceleration Parameter	31
1.14.3	Critical Density	32
1.14.4	Density parameter	32
1.15	Kinematical Parameters	33
1.15.1	Expansion Scalar	33
1.15.2	Shear	33
1.15.3	Anisotropy Parameter	34
2	Bianchi Type-V Early Decelerating and Late Time Accelerating Cosmological Model with Perfect Fluid and Heat Conduction	35
2.1	Introduction	35
2.2	The Metric and Field Equations	38

2.3	Solutions of Field Equations	40
2.4	Physical and Kinematical Behaviors of the Model	42
2.5	Conclusions	46
3	Bianchi Type-II Cosmological Models with String and Bulk Vis-	
	cous Fluid in Lyra Geometry	47
3.1	Introduction	47
3.2	The Metric and Field Equations	50
3.3	Solutions of Field Equations	53
3.4	Physical and Kinematical Behaviors of the Model	55
3.5	Conclusions	61
4	Hypersurface-Homogeneous Cosmological Models with Matter and	
	Dark energy	63
4.1	Introduction	63
4.2	Hypersurface-Homogeneous Bulk Viscous Fluid Models with Decay-	
	ing Cosmological Term	66
4.2.1	Field Equations	67
4.2.2	Solutions of Field Equations	68
4.2.2.1	Model I	70
4.2.2.2	Model II	71
4.2.3	Conclusions	72
4.3	Hypersurface-Homogeneous Cosmological Models with Matter and	
	Dark Energy	73

4.3.1	Field Equations	73
4.3.2	Solutions of Field Equations	73
4.3.2.1	Model I	75
4.3.2.2	Model II	76
4.3.2.3	Model III	77
4.3.3	Conclusions	78
4.4	Hypersurface-Homogeneous Cosmological Models with Dynamical Equation of State Parameter in Lyra Geometry	79
4.4.1	Field Equations	79
4.4.2	Solutions of Field Equations	80
4.4.3	Conclusions	86
5	Dynamics of Magnetized String Cosmological Model in $f(R, T)$	
	Gravity Theory	87
5.1	Introduction	87
5.2	The Metric and Field Equations	90
5.3	Solutions of Field Equations	93
5.4	Physical and Kinematical Behaviors	95
5.5	Stability of the Solutions	99
5.6	Conclusions	100
6	Anisotropic Bianchi Type-III Cosmological Models in $f(R, T)$ Gravity Theory	102
6.1	Introduction	102

6.2	The Metric and Field Equations	105
6.3	Solutions of Field Equations	107
6.3.1	Solution by Special Law of Variation of Hubble Parameter	107
6.3.2	Solutions by Generating Techniques	109
6.3.2.1	Model I	111
6.3.2.2	Model II	113
6.4	Conclusions	114
7	Spatially Homogeneous Cosmological Models in $f(R, T)$ Gravity	
	Theory	116
7.1	Introduction	116
7.2	The Metric and Field Equations	118
7.3	Cosmological Solutions	121
7.4	Physical and Geometrical Behaviors of the Model	121
7.5	Stability of the model	127
7.6	Conclusions	127
8	Anisotropic Cosmological Models with Bulk Viscosity and Particle	
	Creation in Saez-Ballester Theory of Gravitation	129
8.1	Introduction	129
8.2	Basic Equations	131
8.3	Field Equations	134
8.4	Solutions of Field Equations	137
8.4.1	Model I	137

8.4.1.1	Bulk Viscosity Energy-Density Law	139
8.4.1.2	Uniform Particle Number Density ($\dot{\eta} = 0$)	141
8.4.1.3	Ideal Gas	143
8.4.1.4	Creation with Second Order Correction in H	144
8.4.2	Model II	146
8.4.2.1	Bulk Viscosity Energy-Density Law	148
8.4.2.2	Uniform Particle Number Density ($\dot{\eta} = 0$)	150
8.4.2.3	Ideal Gas	151
8.4.2.4	Creation with Second Order Correction in H	153
8.5	Conclusions	154
	Bibliography	156
	List of Publications	186
