<b>1 INTRODUCTION AND LITERATURE REVIEW</b>	<b>1</b>
1.1 Micro and Nano-Electromechanical Systems and Applications . . . . .	1
1.1.1 Micro and nanomechanical resonators . . . . .	2
1.1.2 Quality factor of mechanical resonators . . . . .	3
1.1.3 Energy loss mechanisms in resonators . . . . .	4
1.1.3.1 Air damping . . . . .	4
1.1.3.2 Internal friction . . . . .	5
1.1.3.3 Gas damping . . . . .	5
1.1.3.4 Anchor losses . . . . .	5
1.1.3.5 Thermoelastic damping . . . . .	5

1.2	Classical and Non-Classical Continuum Theories . . . . .	9
1.2.1	Modified couple stress theory . . . . .	10
1.2.2	Nonlocal elasticity theory . . . . .	11
1.3	Some Beam and Plate Theories . . . . .	11
1.3.1	Euler-Bernoulli beam theory . . . . .	11
1.3.2	Timoshenko beam theory . . . . .	12
1.3.3	Kirchhoff plate theory . . . . .	13
1.4	Thermoelasticity . . . . .	14
1.4.1	Lord-Shulman (LS) thermoelasticity theory . . . . .	16
1.4.2	Green-Naghdi (GN) thermoelasticity theory . . . . .	17
1.4.3	Dual-phase-lag (DPL) thermoelasticity theory . . . . .	18
1.4.4	Three-phase-lag (TPL) thermoelasticity theory . . . . .	19
1.4.5	Thermoelasticity theory with a single delay term . . . . .	19
1.4.6	Moore-Gibson-Thompson (MGT) thermoelasticity theory . . . . .	20
1.5	Literature Review . . . . .	20
1.6	Objective of the Thesis . . . . .	31

**2 THERMOELASTIC DAMPING ANALYSIS IN MICRO AND NANO-BEAM RESONATORS BASED ON HEAT CONDUCTION MODEL WITH A SINGLE DELAY TERM 33**

2.1	Analysis of the Quality Factor of Microbeam Resonators Based on Heat Conduction Model with a Single Delay Term . . . . .	33
2.1.1	Introduction <sup>1</sup> . . . . .	33
2.1.2	Problem formulation . . . . .	35
2.1.3	Unified heat conduction equation . . . . .	36
2.1.4	Solution for thermoelastic damping . . . . .	38
2.1.5	Numerical results and discussion . . . . .	41
2.1.6	Conclusion . . . . .	45
2.2	Thermoelastic Damping in Nanobeam Resonators Utilizing Entropy Generation Approach and Heat Conduction Model with a Single Delay Term . . . . .	46
2.2.1	Introduction <sup>2</sup> . . . . .	46
2.2.2	Problem formulation . . . . .	47
2.2.3	TED in nanobeam resonators . . . . .	48
2.2.4	Solution for harmonic vibration . . . . .	48
2.2.5	Entropy based method for TED . . . . .	50
2.2.6	Numerical results and discussion . . . . .	53

2.2.7	Conclusion . . . . .	57
<b>3</b>	<b>THERMOELASTIC DAMPING ANALYSIS IN MICRO AND NANO-BEAM RESONATORS CONSIDERING MOORE-GIBSON-THOMPSON THERMOELASTICITY THEORY</b>	<b>59</b>
3.1	Thermoelastic Damping Analysis in Microbeam Resonators Based on Moore-Gibson-Thompson Generalized Thermoelasticity Theory . . . . .	59
3.1.1	Introduction <sup>3</sup> . . . . .	59
3.1.2	Governing equations . . . . .	61
3.1.3	Problem formulation . . . . .	62
3.1.4	Initial and boundary conditions . . . . .	65
3.1.5	Solution of the problem . . . . .	65
3.1.6	Numerical results and discussion . . . . .	68
3.1.7	Conclusion . . . . .	76
3.2	Small-Scale Effect on Thermoelastic Vibration of Microbeam Considering Modified Couple Stress Theory and Moore-Gibson-Thompson Thermoelasticity Equation . . . . .	78
3.2.1	Introduction <sup>4</sup> . . . . .	78
3.2.2	Problem formulation . . . . .	79
3.2.2.1	Microbeam resonator and assumptions . . . . .	79
3.2.2.2	The modified couple stress theory . . . . .	79
3.2.2.3	The MGT thermoelasticity theory . . . . .	80
3.2.2.4	Equation of motion of microbeam based on MCST . . . . .	81
3.2.3	Solution for deflection and thermal moment of microbeam . . . . .	83
3.2.4	Numerical results and discussion . . . . .	85
3.2.4.1	Results validation . . . . .	86
3.2.4.2	Effect of length-scale parameter . . . . .	88
3.2.5	Conclusion . . . . .	89
3.3	Surface Energy Effects on Thermoelastic Vibration of Nanomechanical Systems under Moore-Gibson-Thompson Thermoelasticity and Eringen's Nonlocal Elasticity Theories . . . . .	90
3.3.1	Introduction <sup>5</sup> . . . . .	90
3.3.2	Problem formulation . . . . .	92
3.3.2.1	Beam deformation considering surface effects . . . . .	92
3.3.2.2	The Euler-Bernoulli beam theory . . . . .	93
3.3.2.3	Nonlocal elasticity theory in an Euler-Bernoulli beam . . . . .	94

3.3.2.4	Equations of coupled thermoelasticity based on MGT theory . . . . .	96
3.3.3	Solution for deflection and temperature . . . . .	97
3.3.4	Numerical results and discussion . . . . .	100
3.3.4.1	Small-scale effects . . . . .	102
3.3.4.2	Surface energy effects . . . . .	103
3.3.4.3	Effects of aspect ratios of the nanobeam . . . . .	105
3.3.4.4	Influence of phase-lag time . . . . .	106
3.3.5	Conclusion . . . . .	108
<b>4</b>	<b>SIZE-DEPENDENT THERMOELASTIC DAMPING ANALYSIS IN NANOBEAM RESONATORS BASED ON ERINGEN'S NON-LOCAL ELASTICITY AND MODIFIED COUPLE STRESS THEORIES</b>	<b>111</b>
4.1	Introduction <sup>6</sup> . . . . .	111
4.2	Problem formulation . . . . .	113
4.2.1	TED in Euler-Bernoulli nanobeam resonators . . . . .	113
4.2.2	Coupled thermoelastic equations based on modified nonlocal couple stress (MNCS) theory . . . . .	114
4.3	Solution of the problem . . . . .	116
4.3.1	Solution for temperature field . . . . .	116
4.3.2	Solution for quality factor . . . . .	117
4.4	Results and discussion . . . . .	120
4.4.1	Validation of results . . . . .	121
4.4.2	Effects of nonlocal parameter on TED . . . . .	122
4.4.3	Couple stress effect on TED . . . . .	123
4.4.4	Influence of phase-lag parameter . . . . .	124
4.5	Conclusion . . . . .	126
<b>5</b>	<b>RESPONSE OF DEFLECTION AND THERMAL MOMENT OF TIMOSHENKO MICROBEAMS CONSIDERING MODIFIED COUPLE STRESS THEORY AND DUAL-PHASE-LAG HEAT CONDUCTION MODEL</b>	<b>129</b>
5.1	Introduction <sup>7</sup> . . . . .	129
5.2	Problem formulation . . . . .	131
5.2.1	Governing equations for Timoshenko microbeam . . . . .	131
5.2.2	The DPL heat conduction model . . . . .	134

---

5.3	Solution of the problem . . . . .	138
5.4	Results and discussion . . . . .	140
5.5	Conclusion . . . . .	148
<b>6</b>	<b>THERMOELASTIC DAMPING ANALYSIS FOR SIZE-DEPENDENT MICROPLATE RESONATORS UTILIZING MODIFIED COUPLE STRESS THEORY AND THREE-PHASE-LAG HEAT CONDUCTION MODEL</b>	<b>151</b>
6.1	Introduction <sup>8</sup> . . . . .	151
6.2	Formulation . . . . .	152
6.2.1	The TPL heat conduction model . . . . .	153
6.3	Solution of the problem . . . . .	158
6.4	Results and discussion . . . . .	162
6.5	Conclusion . . . . .	172
<b>7</b>	<b>SUMMARY OF THE THESIS AND FUTURE SCOPE</b>	<b>174</b>
7.1	Summary . . . . .	174
7.2	Future Scope . . . . .	180

	<b>PUBLICATIONS AND CONFERENCES</b>	<b>204</b>

# LIST OF FIGURES

1.1.1	Flow chart depicting the theory behind thermoelastic damping. . . . .	6
2.1.1	Deformation of an Euler-Bernoulli beam. . . . .	35
2.1.2	(a) Thermoelastic damping versus $\xi$ for aspect ratio 20. (b) Thermoelastic damping versus $\xi$ for aspect ratio 25. (c) Thermoelastic damping versus $\xi$ for aspect ratio 30. . . . .	43
2.1.3	TED versus $h$ for aspect ratios 25 and 30 under TPL, GN-III, LS, and present models. . . . .	44
2.1.4	Effect of time delay parameter on TED versus normalized frequency for fixed aspect ratio 25. . . . .	45
2.2.1	Variation of $Q^{-1}/\Delta_E$ versus non-dimensional frequency $\xi$ for fixed $k^* = 90$ and aspect ratio (a) $L/h = 25$ and (b) $L/h = 30$ . . . . .	54
2.2.2	Variation of $Q^{-1}/\Delta_E$ versus non-dimensional frequency $\xi$ for fixed $k^* = 156$ and aspect ratio (a) $L/h = 25$ and (b) $L/h = 30$ . . . . .	55
2.2.3	Variation of $Q^{-1}/\Delta_E$ versus non-dimensional frequency $\xi$ for fixed $k^* = 200$ and aspect ratio (a) $L/h = 25$ and (b) $L/h = 30$ . . . . .	55
2.2.4	Variation of $Q^{-1}/\Delta_E$ versus beam thickness $h$ for (a) $k^* = 90$ , (b) $k^* = 156$ , and (c) $k^* = 200$ . . . . .	56
3.1.1	Simply supported microbeam subjected to a uniform load initially applied on the upper surface of the beam. . . . .	62
3.1.2	Variation of dimensionless deflection with respect to the dimensionless time for middle point of the beam. . . . .	70
3.1.3	Variation of the deflection difference ( $\phi_0 - \phi$ ) with respect to the dimensionless time for middle point of the beam. . . . .	70
3.1.4	Variation of the dimensionless thermal moment with respect to the dimensionless time for the middle point of the beam. . . . .	71
3.1.5	Variation of the dimensionless deflection with respect to dimensionless time for varying dimensionless parameter $k'_0$ ( $k'_0 \gg 1$ , $k'_0 = 1$ , $k'_0 \ll 1$ ). . . . .	71
3.1.6	Variation of the dimensionless thermal moment with respect to dimensionless time for varying dimensionless parameter $k'_0$ ( $k'_0 \gg 1$ , $k'_0 = 1$ , $k'_0 \ll 1$ ). . . . .	72

3.1.7	Variation of the dimensionless deflection with respect to dimensionless time for different values of applied load on the upper surface of the beam. . . .	72
3.1.8	Variation of the dimensionless deflection with respect to dimensionless time for different values of the beam length. . . . .	73
3.1.9	Variation of the dimensionless thermal moment with respect to dimensionless time for different values of the applied load on the upper surface of the beam. . . . .	74
3.1.10	Variation of the dimensionless thermal moment with respect to dimensionless time for different values of the beam thickness. . . . .	74
3.1.11	Variation of the dimensionless thermal moment with respect to dimensionless time for different values of the beam length. . . . .	75
3.1.12	Effects of phase-lags on the dimensionless thermal moment with respect to the dimensionless time of the beam. . . . .	75
3.2.1	Variation of deflection and thermal moment versus time under classical theory and MCST. . . . .	86
3.2.2	Variation of deflection and thermal moment under MGT, GN-III, and LS models. . . . .	87
3.2.3	Variation of deflection and thermal moment versus time for different values of length-scale parameter. . . . .	88
3.3.1	Simply supported nonlocal Euler-Bernoulli nanobeam with uniform load on the upper surface. . . . .	94
3.3.2	Responses of deflection and temperature versus time. . . . .	102
3.3.3	Responses of deflection and temperature versus time. . . . .	102
3.3.4	Effects of nonlocal parameter on deflection and temperature versus time. .	103
3.3.5	Effects of surface residual tension and surface elastic modulus on deflection versus time. . . . .	104
3.3.6	Effects of surface residual tension and surface elastic modulus on temperature versus time. . . . .	105
3.3.7	Effects of aspect ratios on deflection versus time. . . . .	106
3.3.8	Effects of aspect ratios on temperature versus time. . . . .	106
3.3.9	Effects of phase-lag time on deflection and temperature versus time. . . .	107
4.4.1	Variation of TED ( $Q^{-1}/\Delta_E$ ) under MNCS, nonlocal elasticity, MCST, and classical theories. . . . .	122
4.4.2	Effects of nonlocal parameter on TED by fixing material length-scale parameter as constant. . . . .	123
4.4.3	Effects of material length-scale parameter on TED by fixing nonlocal parameter as constant. . . . .	124
4.4.4	Effects of phase-lag time on TED under MNCS theory. . . . .	125

5.2.1	Geometry of Timoshenko microbeam (a) loading and the introduced coordinate system (b) cross-section of microbeam. . . . .	131
5.4.1	Response of normalized midspan deflection of microbeam w.r.t. dimensionless time considering classical theory and MCST for fixed $l/h = 0.3$ . . . . .	142
5.4.2	Response of normalized midspan deflection of microbeam w.r.t. dimensionless time considering MCST for LS, DPL, and Fourier heat conduction models for fixed $l/h = 0.3$ . . . . .	143
5.4.3	Response of normalized midspan thermal moment of microbeam w.r.t. dimensionless time considering classical theory and MCST for fixed $l/h = 0.3$ . . . . .	144
5.4.4	Response of normalized midspan thermal moment of microbeam w.r.t. dimensionless time considering MCST for LS, DPL, and Fourier heat conduction models for fixed $l/h = 0.3$ . . . . .	144
5.4.5	Response of normalized midspan deflection of microbeam w.r.t. dimensionless time considering MCST for varying aspect ratios (a) $l/h(l/h = 0, 0.4, 1)$ and (b) $l/h(l/h = 0.5, 1, 2)$ . . . . .	145
5.4.6	Response of normalized midspan thermal moment of microbeam w.r.t. dimensionless time considering MCST for varying aspect ratios (a) $l/h(l/h = 0, 0.3, 0.6)$ and (b) $l/h(l/h = 0, 5, 1, 2)$ . . . . .	145
5.4.7	Response of normalized midspan deflection of microbeam w.r.t. dimensionless time considering MCST for varying aspect ratio $L/h(L/h = 4, 6, 10)$ and for fixed $l/h = 0.3$ . . . . .	146
5.4.8	Response of normalized midspan thermal moment of microbeam w.r.t. dimensionless time considering MCST for varying aspect ratio $L/h(L/h = 4, 6, 10)$ and for fixed (a) $l/h = 0$ , (b) $l/h = 0.3$ , (c) $l/h = 0.6$ . . . . .	147
5.4.9	Effect of phase-lags on the normalized midspan thermal moment of microbeam w.r.t. dimensionless time considering MCST for fixed $l/h = 0.3$ . . . . .	147
6.2.1	Schematic diagram of a rectangular microplate. . . . .	153
6.4.1	Behavior of normalized frequency shift ( $[Re(\omega) - \omega_0] / \omega_0 \Delta_E$ ) as a function of dimensionless variable $\xi$ . . . . .	163
6.4.2	Behavior of normalized frequency shift ( $[Re(\omega) - \omega_0] / \omega_0 \Delta_E$ ) and normalized attenuation ( $Im(\omega) / \omega_0 \Delta_E$ ) as a function of dimensionless variable $\xi$ . . . . .	164
6.4.3	Variation of TED in microplate resonator with different values of $\frac{l}{h}$ as a function of the dimensionless variable $\xi$ for first mode ( $m = 1, n = 1$ ). . . . .	165
6.4.4	Variation of TED in microplate resonator with different values of $\frac{b}{h}$ as a function of the dimensionless variable $\xi$ for first mode ( $m = 1, n = 1$ ). . . . .	165

---

6.4.5	Variation of TED in microplate resonator with different values of $\frac{L}{h}$ as a function of the dimensionless variable $\xi$ for first mode ( $m = 1, n = 1$ ). . . . .	166
6.4.6	Variation of TED as a function of dimensionless variable $\xi$ for different values of phase-lag parameters in case of simply supported (SSSS) boundary condition for first mode ( $m = 1, n = 1$ ). . . . .	166
6.4.7	Variation of TED as a function of dimensionless variable $\xi$ for different values of phase-lag parameters in case of clamped-clamped (CCCC) boundary condition for first mode ( $m = 1, n = 1$ ). . . . .	167
6.4.8	Variation of TED in microplate resonator with different values of $\frac{l}{h}$ as a function of the thickness $h$ for first mode. . . . .	168
6.4.9	Variation of TED in microplate resonator with different values of $b$ as a function of the thickness $h$ for first mode. . . . .	169
6.4.10	Variation of TED in microplate resonator with different values of $L$ as a function of the thickness $h$ for first mode. . . . .	169
6.4.11	Variation of TED in microplate resonator with $l = 1 \mu m$ as a function of the thickness $h$ for simply supported and clamped edges of the microplate for first mode. . . . .	170
6.4.12	Variation of TED in microplate resonator with different values of the microplate thickness $h$ as a function of the length scale parameter $l$ for first mode. . . . .	170
