<i>Preface</i>	xxxv-xxxvi	
<b>CHAPTER 1</b>	<b>INTRODUCTION AND LITERATURE REVIEW</b>	<b>1-40</b>
1.1.	Introduction	3
1.2.	Overview of different HPM devices	7
1.2.1.	Relativistic Backward Wave Oscillator	9
1.2.2.	Relativistic Klystron	10
1.2.3.	Relativistic Magnetron	11
1.2.4.	Relativistic Gyrotron Devices	12
1.2.5.	Reltron	14
1.2.6.	Virtual Cathode Oscillator	15
1.3.	Magnetically Insulated Line Oscillator (MILO)	17
1.3.1.	Description of sub-assemblies	19
1.3.2.	Principle of Operation	23
1.4.	Literature Review	27
1.5.	Motivation and Research Objective	35
1.6.	Plane and Scope	36
<b>CHAPTER 2</b>	<b>EQUIVALENT CIRCUIT ANALYSIS OF MILO -- REVIEWED</b>	<b>41-74</b>
2.1.	Introduction	43

2.2.	Reported Analytical Approaches	44
2.3.	Equivalent Circuit Analysis for MILO	48
2.3.1.	EM Field Expression and Boundary Condition	50
2.3.1.1.	Field Expression in disc free region	50
2.3.1.2.	Field Expression in disc occupied region	51
2.3.1.3.	Boundary Condition	52
2.3.2.	Equivalent Line Parameters	53
2.3.2.1.	Equivalent Shunt Capacitance per unit length	54
2.3.2.2.	Equivalent Series Inductance per unit length	57
2.3.3.	Dispersion Relation	59
2.3.4.	Characteristic Impedance	60
2.3.5.	Phase Velocity	60
2.4.	Equivalent Circuit Analysis of MILO for Beam Present Case	60
2.5.	Conclusion	72
<b>CHAPTER 3</b>	<b>MILO PERFORMANCE IMPROVEMENT USING EQUIVALENT CIRCUIT APPROACH</b>	<b>75-102</b>
3.1.	Overview	77
3.2.	Introduction	77
3.3.	Analysis	80
3.3.1.	Tapering Toward Input Side of Cathode	83
3.3.2.	Tapered Choke Section	85
3.3.3.	Impedance Matching at the Extractor Section	86

	3.3.4 Stub Position Optimization	89
3.4.	Results and Discussion	91
	3.4.1 Optimization of Tapering Length of Cathode at Input Side	92
	3.4.2 Optimization of Tapered Choke Section	93
	3.4.3 Optimization of Extractor Section	95
	3.4.4 Optimization of Stub Position	97
	3.4.5 Simulation Results	98
3.5.	Conclusion	101
<b>CHAPTER 4</b>	<b>ANALYSIS OF AZIMUTHAL PARTITION PERIODIC DISC LOADED COAXIAL STRUCTURE FOR BI- FREQUENCY MILO USING EQUIVALENT CIRCUIT APPROACH</b>	<b>103-132</b>
4.1.	Overview	105
4.2.	Introduction	105
4.3.	Analysis	108
	4.3.1. Equivalent shunt Capacitance per unit length	117
	4.3.2. Equivalent series inductance per unit length	119
	4.3.3. Phase velocity of different modes	121
	4.3.4. Dispersion Relation	121
	4.3.5. Characteristic Impedance for different modes	122
4.4.	Results and Discussion	122
	4.4.1. Effect of variation of structure parameters	129

4.5.	Conclusion	131
<b>CHAPTER 5</b>	<b>BEAM-WAVES INTERACTION ANALYSIS FOR BI-FREQUENCY MILO</b>	<b>133-160</b>
5.1.	Overview	135
5.2.	Introduction	135
5.3.	Analysis	138
	5.3.1. EM Field Expression in the presence of Electron Beam	140
	5.3.2 Boundary Condition	146
	5.3.3 Dispersion Relation	147
	5.3.4 Temporal Growth Rate	149
	5.3.5 RF Energy and Power	150
5.4.	Results and Discussion	152
	5.4.1. Effects of Variation of Beam Parameters	157
5.5.	Conclusion	158
<b>CHAPTER 6</b>	<b>DESIGN AND PIC SIMULATION OF DIFFERENT BI-FREQUENCY MILO</b>	<b>161-196</b>
6.1.	Overview	163
6.2.	Introduction	164
6.3.	Design Procedure of Bi-frequency MILO	166
6.4.	PIC Simulation of Different Bi-frequency MILO	169
	6.4.1. L-Band Bi-Frequency MILO	170
	6.4.2. S-Band Bi-Frequency MILO	177

	6.4.3. S/Ku dual-band MILO	183
6.5.	Conclusion	195
<b>CHAPTER 7</b>	<b>SUMMARY, CONCLUSION AND FUTURE SCOPE</b>	<b>197-206</b>
7.1.	Summary and Conclusion	199
7.2.	Limitations of the Present Work and Scope for Further Studies	204
	<i>References</i>	207-214
	<i>Author's Relevant Publications</i>	215-216

## LIST OF FIGURES

---

<b>Figure 1.1:</b>	Application domain of HPM at a different frequency and Power level [Benford <i>et al.</i> (2007)].	<b>3</b>
<b>Figure 1.2:</b>	Block diagram of an HPM system [Benford <i>et al.</i> (2007)].	<b>5</b>
<b>Figure 1.3:</b>	The typical schematic view of relativistic backward wave oscillator.	<b>10</b>
<b>Figure 1.4:</b>	The typical schematic view of relativistic Klystron [Gold and Nusinovich (1997)].	<b>11</b>
<b>Figure 1.5:</b>	The typical schematic view of relativistic Magnetron [Bekefi <i>et al.</i> (1976)].	<b>12</b>
<b>Figure 1.6:</b>	All types of Gyro-devices [Gold and Nusinovich (1982)].	<b>13</b>
<b>Figure 1.7:</b>	Typical schematic of relatron oscillator system [Mahto and Jain (2016)].	<b>15</b>
<b>Figure 1.8:</b>	The typical schematic view of the virtual cathode oscillator.	<b>16</b>
<b>Figure 1.9:</b>	The typical schematic view of a magnetically insulated line oscillator (MILO).	<b>18</b>
<b>Figure 1.10:</b>	Process of electron emission from a velvet surface: (a) The application of the intense electric field causes the partial destruction of fiber and the creation of a dense plasma column (b) Electrons are emitted out of plasma and form a space charge current of the Child-Langmuir type. (c) Heating occurs in fiber due to the Joules effect. (d) Expansion of the plasma column at the thermal speed, and (e) Reduction of inter-electrode space by the total expansion of the plasma of the cathode [Miller (1998)].	<b>19</b>

<b>Figure 1.11:</b>	Different MILO configuration [Clark <i>et al.</i> (1988)].	<b>26</b>
<b>Figure 1.12:</b>	Configuration of Hard-tube MILO (HTMILO) [Haworth <i>et al.</i> (1998)].	<b>26</b>
<b>Figure 1.13:</b>	The configuration of tapered MILO [Eastwood <i>et al.</i> (1998)].	<b>28</b>
<b>Figure 1.14:</b>	The configuration of the improved MILO [Fan <i>et al.</i> (2007)].	<b>29</b>
<b>Figure 1.15:</b>	The configuration of MILO-VCO [Fan <i>et al.</i> (2007)].	<b>30</b>
<b>Figure 1.16:</b>	The schematic of the dual-frequency MILO [Ju <i>et al.</i> (2009)]	<b>31</b>
<b>Figure 1.17:</b>	Bi-frequency MILO configuration: (a) axial view, and (b) front view.	<b>31</b>
<b>Figure 2.1:</b>	The equivalent circuit of transmission line representing the periodic disc loaded coaxial structure for an infinitesimal length $dz$ .	<b>48</b>
<b>Figure 2.2:</b>	The typical schematic view of periodic disc loaded coaxial structure used as an RF interaction structure for MILO.	<b>49</b>
<b>Figure 2.3:</b>	The typical schematic of a periodic disc-loaded coaxial waveguide structure with an electron beam.	<b>61</b>
<b>Figure 3.1:</b>	Schematic view of the magnetically insulated line oscillator (MILO) structure.	<b>81</b>
<b>Figure 3.2:</b>	Input section of the MILO device (a) schematic, and (b) Equivalent circuit diagram.	<b>83</b>
<b>Figure 3.3:</b>	Equivalent circuit diagram of the MILO device at input side.	<b>86</b>
<b>Figure 3.4:</b>	Equivalent circuit diagram of extractor part of MILO.	<b>88</b>
<b>Figure 3.5:</b>	Equivalent circuit diagram for stub section.	<b>90</b>
<b>Figure 3.6:</b>	Reflection coefficient (S11) with normalized tapered length at the input side.	<b>93</b>

<b>Figure 3.7:</b>	(a) Choke section optimization with cut-off frequency (b) Transmission coefficient at the choke section comparison with two designs.	<b>94</b>
<b>Figure 3.8:</b>	Extractor part characteristic impedance at different frequency (a) at different extractor gap (b) at different extractor radius.	<b>95</b>
<b>Figure 3.9:</b>	(a) Reflection coefficient at output side. (b) Dispersion relation of fundamental mode for different section of device.	<b>97</b>
<b>Figure 3.10:</b>	Reflection coefficient for stub section with different position from the extractor disc.	<b>98</b>
<b>Figure 3.11:</b>	(a) Output RF signal received at the output port. (b) RF output power developed at the output port with experimental data. (c) FFT of the generated signal at output port.	<b>99</b>
<b>Figure 3.12:</b>	Output RF signal received at the output port comparison.	<b>100</b>
<b>Figure 3.13:</b>	RF output power developed at the output port with improvement in the device structure.	<b>100</b>
<b>Figure 4.1:</b>	Schematic of an azimuthally partitioned axially periodic metal disc loaded coaxial structure: (a) sectional view, (b) front view.	<b>109</b>
<b>Figure 4.2:</b>	Unit cell structure and corresponding dispersion curve for azimuthally uniform disc-loaded coaxial structure with different wall radii ( $r_w$ ) of 129 mm and 140 mm ( $r_c=53$ mm, $r_d=86$ mm, $L=27$ mm and $T=5$ mm).	<b>125</b>
<b>Figure 4.3:</b>	Unit cell structure and corresponding dispersion curve for azimuthally partitioned disc-loaded coaxial structure with different wall radii $r_{w1}=140$ mm and $r_{w2}=129$ mm (with, $r_c=53$ mm, $r_d=86$ mm, $L=27$ mm and $T=5$ mm).	<b>125</b>
<b>Figure 4.4:</b>	Normalized group velocity and phase velocity of the azimuthally uniform and azimuthally partitioned coaxial structure: (a) normalized group velocity, and (b) normalized phase velocity.	<b>126</b>
<b>Figure 4.5:</b>	Frequency range shift attained through the azimuthally partitioned coaxial structure by changing wall radius ( $r_w$ ).	<b>126</b>

<b>Figure 4.6:</b>	Equivalent shunt capacitance and equivalent series inductance of the transmission line: (a) Shunt capacitance per unit length (b) Series inductance per unit length of the equivalent transmission line for azimuthal uniform ( $r_w=140$ mm and 129 mm) and azimuthal partitioned disc-loaded coaxial structure (with $r_{w1}=140$ mm, $r_{w2}=129$ mm).	<b>127</b>
<b>Figure 4.7:</b>	Electric field distribution vector of the azimuthal partitioned coaxial structure (a) for Mode-A and, (b) for Mode-B.	<b>128</b>
<b>Figure 4.8:</b>	Magnetic field distribution vector of the azimuthally partitioned structure (a) for Mode-A and, (b) for Mode-B.	<b>128</b>
<b>Figure 4.9:</b>	(a) Schematic (b) Normalized power distribution versus frequency response of a typical azimuthally partitioned axially periodic disc loaded coaxial structure.	<b>129</b>
<b>Figure 4.10:</b>	Effect of different structural parameters on the dispersion behaviour of the azimuthally partitioned axially periodic disc loaded coaxial structure: (a) disc inner radius ( $r_d$ ), (b) waveguide wall radius ( $r_w$ ), (c) cathode radius ( $r_c$ ), and (d) disc periodicity ( $L$ ).	<b>130</b>
<b>Figure 5.1:</b>	Schematic of an azimuthally partitioned axially periodic metal disc loaded coaxial structure with beam-present in red colour: (a) sectional view, (b) front view.	<b>139</b>
<b>Figure 5.2:</b>	Dispersion curve for azimuthally partitioned axially periodic metal disc loaded coaxial structure in presence of beam at voltage $V=420$ kV, current $I_a=38$ kA, with different wall radii $r_{w1}=140$ mm and $r_{w2}=129$ mm (with, $r_c=53$ mm, $r_d=86$ mm, $L=27$ mm and $T=7$ mm).	<b>153</b>
<b>Figure 5.3:</b>	Temporal growth rate ( $f_i$ ) at different phase ( $\beta_0 * L$ ) in radian for two operating modes supported by the structure for two different azimuthal sections (i.e. $TM_{00}$ mode for $r_{w1}$ and $TM_{00}$ mode for $r_{w2}$ ).	<b>154</b>
<b>Figure 5.4:</b>	Equivalent shunt capacitance and equivalent series inductance of the transmission line in the presence and absence of electron beam: (a) Shunt capacitance per unit length (b) Series inductance per unit length.	<b>154</b>

<b>Figure 5.5:</b>	(a) RF output peak and average powers obtained through simulation and comparison with reported results [Chen <i>et al.</i> (2008)] (b) FFT of generated RF signal of the designed bi-frequency MILO considering azimuthally partitioned axially periodic metal disc loaded coaxial structure as interaction structure.	<b>155</b>
<b>Figure 5.6:</b>	Comparison of obtained analytical results with simulation results (a) Average RF output power with time, (b) Normalized energy store in cavity with time.	<b>157</b>
<b>Figure 5.7:</b>	Effect of beam parameters on the temporal growth rate of the azimuthally partitioned axially periodic disc loaded coaxial structure in the presence of electron beam: (a) different input beam voltage ( $V$ ), (b) different beam radius ( $r_e$ ).	<b>158</b>
<b>Figure 6.1:</b>	The typical schematic of azimuthal partition $L$ -band bi-frequency MILO.	<b>170</b>
<b>Figure 6.2:</b>	Dispersion curve for azimuthally non-uniform structure with $r_{w1}=129$ mm and $r_{w2}=140$ mm.	<b>172</b>
<b>Figure 6.3:</b>	Magnetic field vector distribution for operating modes: mode 1 and mode 3.	<b>172</b>
<b>Figure 6.4:</b>	Phase space of the electron beam at two different time instant to show the asymmetric beam-wave interaction.	<b>174</b>
<b>Figure 6.5:</b>	Temporal wave particle power transfer with application of 420 kV of voltage and 38 kA of current.	<b>174</b>
<b>Figure 6.6:</b>	Temporal RF port signal of (a) mode 1 associated with azimuthal partition $180^0$ - $360^0$ (b) mode 3 associated with azimuthal partition $0^0$ - $180^0$ .	<b>175</b>
<b>Figure 6.7:</b>	Frequency spectrum of generated RF signal observed at the output port.	<b>175</b>
<b>Figure 6.8:</b>	Combined temporal RF output power of the two modes with and without collector design modification.	<b>176</b>
<b>Figure 6.9:</b>	Virtual cathode formation at the collector through beam dump disc.	<b>176</b>

<b>Figure 6.10:</b>	The typical schematic of azimuthal partition <i>S</i> -band bi-frequency MILO.	<b>178</b>
<b>Figure 6.11:</b>	Dispersion curve for <i>S</i> -band bi-frequency MILO with azimuthally non-uniform structure having $r_{w1}=64$ mm and $r_{w2}=66$ mm.	<b>179</b>
<b>Figure 6.12:</b>	Magnetic field vector distribution of operating modes (i.e. mode 1 and mode 3) of the <i>S</i> -band bi-frequency MILO.	<b>180</b>
<b>Figure 6.13:</b>	Phase space of the electron particles for <i>S</i> -band bi-frequency MILO at a different time.	<b>181</b>
<b>Figure 6.14:</b>	Temporal input power with the application of 490 kV of voltage and 45 kA of current (also known as wave-particle power transfer).	<b>181</b>
<b>Figure 6.15:</b>	Temporal RF output port signal related in <i>S</i> -band of (a) mode 1 (b) mode 3	<b>182</b>
<b>Figure 6.16:</b>	The frequency spectrum of the RF signal obtained through FFT of the signal obtained at the output port.	<b>183</b>
<b>Figure 6.17:</b>	Combined temporal RF output power of the two frequencies.	<b>183</b>
<b>Figure 6.18:</b>	The typical schematic of dual-band MILO structure with SWS1 and SWS2 as the slow-wave structures, C1, C2, C3 as the cathode.	<b>185</b>
<b>Figure 6.19:</b>	Region of operation curve defining Hull cut-off condition and Buneman-Hartree threshold criteria for dual-band MILO.	<b>185</b>
<b>Figure 6.20:</b>	Dispersion curve and its temporal growth rate for fundamental mode (i.e. $TM_{01}$ mode) (a) of <i>S</i> -band and, (b) of <i>Ku</i> -band.	<b>186</b>
<b>Figure 6.21:</b>	Role and effect of segregation cavity for different frequency band (a) for <i>S</i> -band and, (b) for <i>Ku</i> -band.	<b>188</b>
<b>Figure 6.22:</b>	Applied input DC voltage (in kV) pulse with 10 ns rise time 130 ns hold time and 10 ns fall time with the generated current (in kA).	<b>189</b>
<b>Figure 6.23:</b>	Number of particles emitted from the surface of cathode structure at different time in ns.	<b>189</b>

<b>Figure 6.24:</b>	Different phases of beam wave interaction inside the device (a) Pre-oscillation phase (b) magnetic insulation phase (c) start oscillation phase (d) non-linear phase.	<b>190</b>
<b>Figure 6.25:</b>	Normalized momentum at different axial position at 65.02 ns time of oscillation.	<b>192</b>
<b>Figure 6.26:</b>	<i>S</i> -band (a) received RF signal at the output port (b) frequency spectrum of corresponding RF output signal found through Fast Fourier Transform (FFT).	<b>193</b>
<b>Figure 6.27:</b>	<i>Ku</i> -band (a) received RF signal at the output port (b) frequency spectrum of corresponding RF output signal found through Fast Fourier Transform (FFT).	<b>193</b>
<b>Figure 6.28:</b>	RF output peak power (in GW) received at the output port for <i>S</i> -band.	<b>194</b>
<b>Figure 6.29:</b>	RF output peak power (in GW) received at the output port for <i>Ku</i> -band.	<b>194</b>

## LIST OF TABLES

---

<b>Table 1.1:</b>	Application of HPM device in different domains.	<b>4</b>
<b>Table 1.2:</b>	Comparison of MILO with other HPM Sources.	<b>17</b>
<b>Table 1.3:</b>	Chronological order of development of MILO device.	<b>33</b>
<b>Table 3.1:</b>	Typical <i>L</i> -band MILO specification.	<b>92</b>
<b>Table 6.1:</b>	Design Specification of <i>L</i> -band bi-frequency MILO.	<b>171</b>
<b>Table 6.2:</b>	Design Parameters of <i>S</i> -band bi-frequency MILO.	<b>179</b>
<b>Table 6.3:</b>	Design parameters of <i>S</i> / <i>Ku</i> dual-band MILO.	<b>186</b>

## LIST OF ABBREVIATIONS

---

<b>Abbreviation</b>	<b>Full form</b>
HPM	High power microwaves
RF	Radio Frequency
PRF	pulse repetition frequency
DEW	Direct energy weaponry
EM	Electromagnetic
TWT	Traveling wave tube
RBWO	Relativistic backward wave oscillator
MILO	Magnetically insulated line oscillator
GHz	Giga-hertz
MHz	Mega-hertz
GW	Giga-watt
MW	Mega-watt
Ns	Nano-second
RKO	Relativistic klystron oscillator
RKA	Relativistic klystron amplifier
CRM	Cyclotron resonance masers
FEL	Free Electron Laser
SWS	Slow-wave structure
TM	Transverse Magnetic
MW	Mega-watt
SCO	Split cavity oscillator

TE	Transverse Electric
EEE	Explosive electron emission
CTL	Coaxial transmission line
UHF	Ultrahigh frequency
RBF	Relativistic Brillouin flow
VCO	Virtual cathode oscillator
PIC	Particle-in-cell
HEM	Hybrid electromagnetic
HE	Hybrid electric
FFT	Fast Fourier Transform
AC	Alternating Current
DC	Direct Current
TTO	Transit time oscillator
BFMILO	Bi-frequency magnetically insulated line oscillator
TGR	Temporal growth rate
SCW	Space charge wave
Cm	Centimeter
Mm	Millimeter
kV	Kilo-volt
kA	Kilo-ampere
TEM	Transverse Electromagnetic

## LIST OF SYMBOLS

Symbol	Details
$v_e$	Electron velocity
$v_p$	phase velocity
$L_e$	Equivalent series inductance per unit length
$C_e$	Equivalent shunt capacitance per unit length
$G_e$	Equivalent shunt conductance per unit length
$R_e$	Equivalent series resistance per unit length
$r_c$	Cathode radius
$r_d$	Disc inner radius
$r_w$	Outer wall radius
$L$	Periodicity
$T$	Thickness
$E$	Electric field
$H$	Magnetic field
$\beta_n$	Axial propagation constant
$\omega$	Angular frequency
$\gamma_n$	Radial propagation constant
$k$	Free space propagation constant
$J_0$	Bessel functions of 1 <sup>st</sup> kind with zero order
$Y_0$	Bessel functions of 2 <sup>nd</sup> kind with zero order
$\rho_s$	Surface charge density
$I_z$	Axial current
$V$	Voltage
$J_z$	Axial current density
$c$	Speed of light
$F$	Frequency

$A_z$	Vector potential
$\mu$	Permeability
$\varepsilon$	Permittivity
$I_\theta$	Azimuthal current
$Z_0$	Characteristic impedance
$f_1\{x, p, t\}$	RF distribution function
$\zeta_n$	velocity shifted frequency
$\Gamma_n^*$	Radial beam parameter in presence of beam
$\omega_p$	Plasma frequency
$Q_{int}$	Internal quality factor
$Q_{ext}$	External quality factor
$Q_0$	Loaded quality factor
$P_0$	Initial injected power
$\rho$	Complex reflection coefficient
$L_{IC}$	Equivalent series inductance per unit length for Interaction structure
$C_{IC}$	Equivalent shunt capacitance per unit length for Interaction structure
$W_{nm}$	Inductance factor
$P_{nm}$	Capacitance factor
$L_{ch}(z)$	Equivalent series inductance per unit length for tapered choke section
$C_{ch}(z)$	Equivalent shunt capacitance per unit length for tapered choke section
$L_{ext}$	Equivalent series inductance per unit length for extractor section
$C_{ext}$	Equivalent shunt capacitance per unit length for extractor section
$L_{cx}$	Equivalent series inductance per unit length for coaxial section
$C_{cx}$	Equivalent shunt capacitance per unit length for coaxial section
$Z_{IC}$	Impedance of interaction structure
$Z_{ext}$	Impedance of extractor section

$\Gamma(z)$	Nominal propagation constant
$K(z)$	Nominal characteristic impedance
$q_v(z)$	Reflection coefficient at tapered cathode section
$C_{E.G}$	Capacitance of the extractor gap
$E_{E.G}$	Electric field at the extractor gap
$\sigma_{E.G}$	Charge per unit length at extractor
$Z_{stub}$	Impedance of stub
$L_{stub}$	Inductance of stub
$l_{stub}$	Length of stub
$\lambda$	Wavelength
$\lambda_g$	Guided wavelength
$l_T$	Length of tapered cathode
$\hat{v}_z$	Axial drift velocity
$\gamma$	Relativistic factor
$P_z$	Axial momentum
$n_e$	Charge number density
$r_e$	Electron beam radius
$\eta$	Normalized factor
$\delta(r - r_e)$	Delta function
$I_A$	Alfven current
$P_\theta$	Azimuthal momentum
$J_\theta$	Azimuthal current density
$\gamma_n^*$	Radial propagation constant in presence of electron beam
$v_{slow\_sc}$	Slow space charge velocity
$f_i$	Imaginary value of frequency
$f_r$	Real value of frequency
$I_a$	Anode current
$I_{cr}$	Critical current

$B_c$	Cut-off magnetic field
$V_H$	Hull cut-off voltage
$V_{BH}$	Buneman-Hartee voltage
$e$	Electron charge
$m_0$	Electron mass
$\chi_{np}$	Modal root of the nth order Bessel–Neumann combination
$dB$	Decibel
