Abstract	xxxiv
Chapter-1 INTRODUCTION	1-14
1.1 General	1
1.2 Nuclear power plants worldwide	3
1.3 Nuclear power plant (NPP) containment	6
1.4 Thesis organization	13
Chapter-2 LITERATURE REVIEW	15-46
2.1 General	15
2.2 Analytical approaches on NPP containment wall	16
2.3 Numerical approaches on NPP containment wall	25
2.4 Concrete and steel behavior under high rate of loading and elevated temperature	32

2.5	Critical observation	44
2.6	Scope of present study	45
Chapter-3	BACKGROUND OF MATERIAL MODELS	47-68
3.1	General	47
3.2	Concrete model under impact loading	48
3.3	Concrete model under fire	59
3.4	Reinforcement model under impact loading and fire	64
3.5	Material properties for aircraft model	67
Chapter-4	GEOMETRIC AND FINITE ELEMENT MODELING OF AIRCRAFT AND NPP CONTAINMENT	69-94
4.1	General	69
4.2	Aircraft Boeing 707-320	70
4.2.1	Modeling of aircraft Boeing 707-320	71
4.2.2	Meshing details of Boeing 707-320	72
4.3	Modeling of hypothetical structure	75
4.3.1	Modeling of PCC plate	75
4.3.2	Modeling of RCC plate	76
4.3.3	Modeling of RCC cylindrical wall	77
4.4	Modeling of some real NPP containments	78
4.5	Mesh convergence study	81
4.6	Meshing details of containment wall and reinforcement bar	83

4.7	Interactions and boundary conditions	90
4.7.1	When the load curve is applied on NPP wall	90
4.7.2	When geometric model of aircraft is applied on NPP wall	91
4.7	Summary	94
Chapter-5	BEHAVIOR OF CONTAINMENT STRUCTURES AGAINST DIFFERENT AIRCRAFTS	95-178
5.1	General	95
5.2	Analysis of PCC plate	97
5.2.1	Impact of Boeing 707-320 on PCC plate	97
5.2.2	Impact of Phantom F4 on PCC plate	103
5.3	Analysis of RCC plate	108
5.4	Analysis of RCC cylindrical wall	113
5.5	Analysis of three-mile island reactor (TMIR) containment wall	122
5.6	Most damaged prone NPP reactor containment	137
5.7	Most damaging aircraft on NPP containment	144
5.7.1	Most damaging aircraft on BWR containment	144
5.7.2	Most damaging aircraft on TMIR containment	151
5.8	Critical impact location	160
5.9	Response of containment under different strain rates	167
5.10	Parametric study of containment response	173

5.11	Summary	177
Chapter-6	REACTION FORCE TIME CURVE AND AREA OF IMPACT	179-210
6.1	General	179
6.2	Reaction-time curve	179
6.2.1	Effect of target curvature	180
6.2.2	Effect of target deformability	185
6.2.3	Effect of aircraft impact angle	187
6.3	Calculation of effective area under impact	189
6.4	NPP containment wall under reaction time curve and geometric model	192
6.5	Response of containment against trifurcation approach	202
6.6	Summary	209
Chapter-7	RESPONSE OF NUCLEAR CONTAINMENT UNDER CRASH INDUCED FIRE	211-232
7.1	General	211
7.2	Three-mile island NPP containment geometry	211
7.3	Loading details	213
7.4	Results and Discussions	215
7.4.1	Heat transfer analysis	215
7.4.2	Impact analysis	223
7.4.3	Thermal stress analysis	225

7.5	Summary	230
Chapter-8	CONCLUSIONS	233-238
8.1	General	233
8.2	Concluding remarks	234
8.3	Scope of future study	237
	REFERENCES	239-251
