

CERTIFICATE

This is to certify that the revised thesis entitled “**Analysis of Effect of Carbonation on Reinforced Cement Concrete**” is being submitted by Mr. Alok Ranjan in partial fulfilment for the award of Ph.D. in Department of Civil Engineering IIT (BHU), Varanasi is a record of bonafide work carried out by him.

Date of Submission:

Prof. Rajesh Kumar

(Supervisor)

Prof. Devendra Mohan

(Co-supervisor)

Forwarded by:

Signature of Head of Department

DECLARATION BY THE CANDIDATE

I, Alok Ranjan, certify that the work embodied in this thesis is my own bonafide work and carried out by me under the supervisions of Prof. Rajesh Kumar and Prof. Devendra Mohan in “Department of Civil Engineering” from “23rd July 2014 to 11th February 2021” at the Department of Civil Engineering, Indian Institute of Technology (BHU), Varanasi. The matter embodied in this thesis has not been submitted for the award of any other degree/diploma. I declare that I have faithfully acknowledged and given credits to the research workers wherever their works have been cited in my work in this thesis. I further declare that I have not willfully copied any other’s work, paragraphs, text, data, results, etc., reported in journals, books, magazines, reports dissertation, thesis, etc., or available at websites and have not included them in this thesis and have not cited as my own work.

Date:

Place:

(Alok Ranjan)

CERTIFICATE BY THE SUPERVISOR

It is certified that the above statement made by the student is correct to the best of my/our knowledge.

Prof. Rajesh Kumar

(Supervisor)

Department of Civil Engineering

IIT (BHU), Varanasi

Prof. Devendra Mohan

(Co-Supervisor)

Department of Civil Engineering

IIT (BHU), Varanasi

Signature of Head of Department

COPYRIGHT TRANSFER CERTIFICATE

Title of the Thesis: Analysis of Effect of Carbonation on Reinforced Cement Concrete

Name of the Student: Alok Ranjan

Copyright Transfer

The undersigned hereby assigns to the Indian Institute of Technology (Banaras Hindu University) all rights under copyright that may exist in and for the above thesis submitted for the award of the "*Doctor of Philosophy*".

Date:

Place:

(Alok Ranjan)

Note: However, the author may reproduce or authorize others to reproduce material extracted verbatim from the thesis or derivative of the thesis for author's personal use provided that the source and the Institutes copyright notice are indicated.

ACKNOWLEDGEMENTS

I express my deep sense of gratitude and indebtedness towards my guides Dr. Rajesh Kumar, Professor, Department of Civil Engineering and Dr. Devendra Mohan, Professor, Department of Civil Engineering, Indian Institute of Technology (Banaras Hindu University) Varanasi, for providing their continuous support, motivation and guidance throughout the course of this study and in the participation of this thesis. Without their support, I would not be able to reach this mark of submission of thesis report.

I would like to thank Prof. Prabhat Kumar Singh Dikshit (Head), Department of Civil Engineering, Indian Institute of Technology (Banaras Hindu University) Varanasi, for motivating me and assisting me with all the facilities to carry out my research work.

I would also like to express my sincere thanks to RPEC member's Prof. S Mandal, Department of Civil Engineering and Prof. R S Singh, Department of Chemical Engineering, Dr. Anurag Ohri, Department of Civil Engineering, Indian Institute of Technology (Banaras Hindu University) Varanasi, for their advice and recommendation which catalyzed the improvement of my research from various perspectives.

I wish to express deep regards to Prof. S.B. Dwivedi, Department of Civil Engineering, Prof. Virendra Kumar, Department of Civil Engineering, Prof. Prabhat Kumar Singh, Department of Civil Engineering and all the teachers and Research Associates of Department of Civil Engineering, Indian Institute of Technology (Banaras Hindu University) Varanasi, for their kind support at all moments during the progress of my research.

With a deep sense of gratitude I express my sincere thanks to Central Instrument Facility Centre (CIFC) - Indian Institute of Technology (Banaras Hindu University) Varanasi, for their help in carrying out sample analysis. I am grateful to my Laboratory Assistant, Department of Civil/Chemical Engineering & Technology, Indian Institute of Technology

(Banaras Hindu University) Varanasi, for the assistance extended by him time to time during this research work. I am also grateful to all Laboratory staff and all supporting staffs of Department of Civil Engineering, Indian Institute of Technology (Banaras Hindu University) Varanasi, for the assistance help in this research work.

I am grateful to all the office staff and authorities of Department of Civil Engineering, Indian Institute of Technology (Banaras Hindu University) Varanasi, for their kind help during the period of my stay to complete the thesis work.

I am thankful to my fellow friends Mr. Shashi Kumar, Mr. Chayan Gupta, Mr. Sujeet Kumar, my colleagues and juniors for their support, cooperation and sincere help in many ways.

I would like to thank my parents for being my pillars of strength, my wife for support and motivation and my beloved son Pragyan for being my inspiration for life.

I would like to offer special thanks to BHEL for granting me study leave for the course of PhD.

Finally, I bow with reverence and gratitude to thank the Almighty who has enriched me with such an excellent opportunity and infused the power in my mind to fulfill the work assigned to me.

List of Notations

Notation	Full Form
CO₂	Carbon Di-oxide
CA	Coarse Aggregate
CSH	Calcium Silicate Hydrate
CH	Calcium hydroxide
FA	Fly Ash
GGBS	Ground Granulated Blast Furnace Slag
NVC	Normally-Vibrated Concrete
OPC	Ordinary Portland Cement
PC	Portland Cement
PPC	Portland Pozzolana Cement
RCC	Reinforced Cement Concrete
RH	Relative Humidity
SF	Silica Fume
W/C	Water Cement Ratio
SCM	Supplementary Cementitious Material
CSM	Condensed Silica Fume
XRDA	X-ray Diffraction Analysis
FTIR	Fourier Transformation Infra-red
SEM	Scanning Electron Microscopy
HVFA	High Volume Fly Ash
TGA	Thermal Gravimetric Analysis
PCA	Poly Carboxylic Acid

PREFACE

Concrete is the most widely used construction material across the globe. Durability of hardened concrete depends upon several factors and the same is a major concern for civil / structural engineers to ensure sustainability of structures. Detailed study of deterioration of concrete structures, its causes and remedial tools is the need of the hour. As such, no concluding remarks may be made from the studies since the results of different researchers are different. Since concrete structures are widely used and the issue of reinforcement corrosion demands serious concern, it is important to be able to determine carbonation accurately and to be able to design structures accordingly. Carbonation is one of the most important factors upon which durability greatly depends. The natural process of Carbonation of concrete structures in our surroundings is very slow. However, for the purpose of study, carbonation effect on the concrete can be accelerated which simulates the actual behavior of effect of carbonation on concrete. Further, the magnitude of carbonation in concrete can be analyzed through various procedures. It is equally important to assess accurate values of carbonation through the most effective methodology to be able to ascertain correct data for design purpose. Past experiments have also shown that the depth of carbonation is distinctly influenced by multiple factors including both mix proportion and constituents as well as external factors.

In this study, experiments have been conducted on concrete cubes by varying multiple factors such as type of cement, water/cement ratio, effect of super plasticizer, CO₂ concentration, replacement of cement and fine aggregate with fly ash, micro silica and GGBS and curing period, paint, plaster, exposure period and percentage of relative humidity (RH) in order to assess the depth of carbonation under various conditions. Carbonation effect on concrete has been simulated in controlled carbonation chamber in

short duration of time. Phenolphthalein indicator method, being the most widely used and economic methodology of determination of depth of carbonation has been used for most samples to assess carbonation depth and analyze the impact of various factors on carbonation in concrete for both OPC and PPC concrete. Further, in this study, concrete samples have also been tested through advanced techniques such as XRD analysis, FTIR method and SEM. Experiments through advanced techniques have been conducted for few samples only by varying type of cement and water cement ratio (W/C), mainly to determine the magnitude of results and accuracy of data.

Experimental investigations have resulted in clear indication of the impact of various factors on the depth of carbonation. It is seen that carbonation increases with the increase of water/cement, CO₂ concentration and exposure period. Carbonation depth decreases with increasing curing period, use of super plasticizers, paint, plaster, partial replacement of cement with fly ash, micro silica and GGBS and replacement of fine aggregate with fly ash and GGBS. Further the trend of increase/decrease of carbonation on account of other factors have also been determined with the help of experimental data and have been graphically represented in this study. It is also found that the depths of carbonation in PPC concrete are higher than that in OPC concrete. Results also show that the carbonation depth values of advanced techniques are nearly double that of the conventional phenolphthalein indicator method.

The results of the experiments can be analyzed to determine the practical depths of carbonation in concrete subject to various conditions. The significance of the carbonation depths for different concrete types and exposure conditions obtained from the experiments will act as a tool to design concrete structures resistant to carbonation.
