Preface **v**

List of Tables **xv**

List of Figures **xvii**

1 Introduction **1**

1.1 Computational thermodynamics of alloys 1

1.2 Thermodynamic models 5

1.2.1 CALPHAD methodology 7

1.2.2 Cluster expansion–cluster variation method 9

1.2.3 Cluster-site approximation 14

1.3 Scope of the thesis 15

2 Analytical solutions for correlation functions of ordered phases **19**

2.1 Introduction 19

2.2 CE–CVM formulation for an ordered phase having two sublattices . . . 20

2.3 Correlation functions in sublattice solvent bases 24

2.4 Analytical solutions for the CFs of $B2$ phase 26

2.5 Analytical solutions for the CFs of $L1_0$ phase 30

2.6 Discussion and conclusions 33

3 Analytical solutions and thermodynamics of binary BCC and FCC phases for exclusive second neighbour pair interactions **39**

3.1 Introduction 39

3.2 Analytical solutions for CFs in $A2$ phase 40

3.3 Analytical solutions for CFs in $B32$ phase 44

3.4 Analytical solutions for CFs in $A1$ and $L1_1$ phases 49
3.5 Helmholtz energy 50
3.6 Heat capacity 52
3.7 Thermodynamic stability function (ψ) 54
3.8 Applications 56

4 Polynomials for configurational correlation functions 57
4.1 Introduction 57
4.2 Approximating polynomials for disordered phases 58
4.3 Approximating polynomials for ordered phases 63
4.4 Application to $A2$ and $B32$ phases 65
4.5 Results and discussion 71

5 Modification of CVM entropy functional for binary FCC phases using tetrahedron approximation 79
5.1 Introduction 79
5.2 Modification of CVM entropy functional 81
5.3 Results and discussion 83
5.3.1 MCVM–T approximation 83
5.3.2 Au–Cu phase diagram 90
5.4 Conclusions 93

6 Summary and scope for future work 95

References 99

A Thermodynamics of ordered phases in the limit of perfect ordering A-1
A.1 BCC based ordered phases A-1
A.1.1 Thermodynamics of $B32$ phase using tetrahedron approximation A-1
A.1.2 Thermodynamics of $D0_3$ phase using tetrahedron approximation A-4
A.2 FCC based ordered phases A-8
A.2.1 Thermodynamics of $L1_0$ phase using tetrahedron–octahedron approximation A-8
A.2.2 Thermodynamics of $L1_2$ phase using tetrahedron approximation A-18

A.2.3 Thermodynamics of $L1_2$ phase using tetrahedron–octahedron approximation A-21
A.2.4 Thermodynamics of $L1_1$ phase using tetrahedron–octahedron approximation A-28
A.3 CPH based ordered phases A-35
A.3.1 Thermodynamics of $B19$ phase using triangle–tetrahedron approximation A-35
A.3.2 Thermodynamics of $B19$ phase using tetrahedron–octahedron approximation A-41
A.3.3 Thermodynamics of $D0_{19}$ phase using triangle–tetrahedron approximation A-57
A.3.4 Thermodynamics of $D0_{19}$ phase using tetrahedron–octahedron approximation A-62

B Derivation of $\Delta\psi$ **A-75**

C Determination of coefficients of the polynomials **A-77**
