

## TABLE OF CONTENTS

List of Figures.....	vii
List of Tables.....	xiii
Abbreviations.....	xv
Symbols.....	xvii
Preface.....	xix
<b>Chapter 1:</b> Introduction and Literature Review.....	1
1.1    Historical sketch.....	1
1.2    Quasicrystalline materials .....	2
1.3    Crystallography of quasicrystals.....	4
1.3.1    Penrose tiling.....	7
1.3.2    Quasi – unit cell theory .....	7
1.4    Al-Cu-Fe quasicrystals.....	8
1.4.1    Synthesis of Al-Cu-Fe quasicrystals .....	13
1.4.1.1    Rapid solidification.....	14
1.4.1.2    Mechanical alloying.....	15
1.4.1.3    Hot pressing and spark plasma sintering .....	16
1.4.1.4    Coatings of Al-Cu-Fe quasicrystals .....	16
1.5    Properties of quasicrystals .....	17
1.5.1    Physical properties .....	17
1.5.2    Surface characteristics.....	19
1.5.3    Mechanical properties .....	20
1.6    Application of quasicrystals.....	21
1.6.1    Light absorption and sensors.....	21
1.6.2    Thermal barrier coatings .....	21
1.6.3    Catalyst and hydrogen storage .....	21
1.6.4    Strengthening of alloys.....	22
1.7    High entropy alloys.....	22
1.8    Aluminium based metal matrix composites.....	24
1.8.1    AMCs reinforced with quasicrystals .....	27
1.8.2    AMCs reinforced with high-entropy alloys .....	38
1.9    Powder Metallurgy.....	41

1.9.1	Powder production .....	41
1.9.2	Ball milling.....	43
1.9.3	Powder consolidation .....	43
1.10	Motivation.....	45
1.11	Objective of the thesis.....	46
<b>Chapter 2: Materials and Experimental Details.....</b>		<b>49</b>
2.1	Materials designation .....	50
2.2	Materials synthesis.....	51
2.2.1	Vacuum induction melting .....	51
2.2.2	Gas atomized Al alloy .....	52
2.3	Composite powder production .....	53
2.3.1	Vibratory ball milling.....	54
2.3.2	High energy ball milling .....	56
2.4	Powder compaction.....	57
2.4.1	Spark plasma sintering .....	57
2.4.2	Hot pressing.....	58
2.5	Structural Characterization .....	59
2.5.1	X-ray diffraction.....	59
2.5.2	Optical microscopy .....	61
2.5.3	Scanning electron microscopy .....	62
2.5.4	Transmission electron microscopy.....	62
2.6	Thermal stability .....	63
2.6.1	Differential scanning calorimetry.....	63
2.6.2	Annealing treatment .....	64
2.7	Physical and mechanical properties .....	64
2.7.1	Density measurements.....	64
2.7.2	Hardness .....	65
2.7.3	Compressive testing .....	66
<b>Chapter 3: Al-Cu-Fe Quasicrystalline Matrix Composite Reinforced with Sn.....</b>		<b>67</b>
3.1	Structural transformation of IQC-Sn milled powder .....	68
3.1.1	XRD analysis of IQC-Sn milled powder.....	69

3.1.2	TEM investigation of IQC-Sn milled powder.....	82
3.2	Morphology of IQC-Sn milled powder.....	90
3.3	Thermal stability of IQC-Sn milled powder .....	92
3.4	Indentation behavior of IQC-Sn milled powder.....	101
3.5	Microstructure and mechanical properties of IQC-Sn bulk composite.....	105
3.5.1	IQC-Sn composite consolidated by SPS .....	105
3.5.2	IQC-Sn composite consolidated by hot pressing .....	110
3.6	Discussion .....	112
3.6.1	Structural transformation during mechanical milling .....	113
3.6.2	Theoretical estimation of grain size during mechanical milling .....	116
3.6.3	Thermal stability of IQC-Sn milled powder.....	119
3.6.4	Toughening behavior of IQC-Sn composite .....	120
3.7	Conclusions.....	121

**Chapter 4:** AA 6082 Al-alloy based Metal Matrix Composite Reinforced with Al-Cu-Fe Quasicrystal.....125

4.1	Phase analysis of mechanically milled Al-IQC nanocomposite powder .....	126
4.1.2	XRD analysis of Al-IQC nanocomposite powder.....	126
4.1.2	TEM investigation of Al-IQC nanocomposite powder .....	136
4.2	Morphology of Al-IQC nanocomposite powder.....	141
4.3	Spark plasma sintering of Al-IQC composite .....	144
4.4	Discussion .....	154
4.4.1	Structural and microstructural features of Al-IQC milled powder .....	154
4.4.2	Mechanical property and interfacial strengthening of composite .....	157
4.5	Conclusions.....	160

**Chapter 5:** AA 6082 Al-alloy based Metal Matrix Composite Reinforced with Non-equiautomic AlSiCrMnFeNiCu HEA.....163

5.1	Phase analysis of non-equiautomic AlSiCrMnFeNiCu HEA .....	164
5.1.1	XRD analysis of HEA .....	164
5.1.2	TEM investigation of HEA .....	171
5.2	Microstructure and morphology of HEA .....	174
5.3	Phase analysis of AMCs reinforced with HEA.....	178
5.3.1	XRD of Al-HEA nanocomposite powder .....	180

5.3.2	TEM investigation of Al-HEA milled powder.....	184
5.4	Morphology of Al-HEA milled powder .....	187
5.5	Thermal stability of Al-HEA milled powder .....	188
5.6	Pressure-less sintering of Al-HEA composite .....	189
5.7	Discussion.....	193
5.7.1	Phase evolution in HEA .....	193
5.7.2	Microstructural features and mechanical properties of Al-HEA composite .....	197
5.8	Conclusions.....	201
<b>Chapter 6:</b>	<b>Summary and Suggestions for future work.....</b>	<b>203</b>
6.1	Summary .....	203
6.1.1	Al-Cu-Fe quasicrystalline matrix composite reinforced with Sn.....	203
6.1.2	Al-based metal matrix composite reinforced with Al-Cu-Fe quasicrystals .....	205
6.1.3	Al-based metal matrix composite reinforced with AlSiCrMnFeNiCu HEA ....	207
6.2	Suggestions for future work.....	208
<b>References.....</b>		<b>211</b>
<b>List of Publications.....</b>		<b>239</b>
<b>List of Conferences Attended.....</b>		<b>241</b>

## LIST OF FIGURES

<b>Figure 1. 1:</b> (a) Bright-field image; selected area diffraction (SAD) pattern along (b) five-fold (c) three-fold [75] (d) two-fold axis of rotation in Al-Cu-Fe quasicrystal [76]. .....	9
<b>Figure 1. 2:</b> (a) Equilibrium phase diagram depicting the presence of icosahedral and other crystalline phases; (b) pseudo-binary Al-Cu-Fe phase diagram for Al-Cu-Fe IQC showing phases between $\omega$ -phase ( $\text{Al}_{70}\text{Cu}_{20}\text{Fe}_{10}$ ) and $\text{Al}_{58}\text{Cu}_{28}\text{Fe}_{14}$ [84]; (c) TTT curve as a function of temperature for Al-Cu-Fe alloy [85]; (d) compositional range for the formation of IQC phases in Al-Cu-Fe alloy by the high cooling rate [15].....	12
<b>Figure 1. 3:</b> (a) Temperature dependence of Al-Cu-Fe and Al-Cu-Ru quasicrystals [160]; (b) Co-efficient of friction observed for Al-based ternary quasicrystals during sliding scratch test [163]; (c) True stress-strain curve of Al-Cu-Fe IQC as a function of temperature [163]; (d) Vickers microhardness of Al-Cu-Fe IQC alloy as a function of temperature [164]. .....	18
<b>Figure 1. 4:</b> Evolution and stability of phases at the interfaces of Al-IQC composite during hot pressing [298]. .....	30
<b>Figure 2. 1:</b> Schematic of KC-0 cryobox/vial used for fragmentation of as-cast alloys... <td>55</td>	55
<b>Figure 2. 2:</b> Williamson – Hall plot for computing crystallite size and lattice strain.....	60
<b>Figure 2. 3:</b> Precision lattice parameter by Bradley – Jay method. ....	61
<b>Figure 3. 1:</b> Phase analysis of (a) as-cast and annealed $\text{Al}_{62.5}\text{Cu}_{25}\text{Fe}_{12.5}$ (at %) IQC alloy and (b) as-received Sn powder; SEM micrograph of as-cast and annealed $\text{Al}_{62.5}\text{Cu}_{25}\text{Fe}_{12.5}$ (at %) IQC alloy and (d) as-received Sn powder.....	69
<b>Figure 3. 2:</b> Phase transformation during MM of IQC-10Sn (a); Changes in the superlattice (311111) peak in FCI quasicrystal during MM in IQC-10Sn (b); Structural transformation of IQC to crystalline phases (c). .....	70
<b>Figure 3. 3:</b> Phase transformation during MM of IQC-20Sn (a); Changes in the superlattice (311111) peak in FCI quasicrystal during MM in IQC-20Sn (b); Structural transformation of IQC to crystalline phases (c). .....	72
<b>Figure 3. 4:</b> Phase transformation during MM of IQC-30Sn (a); Changes in the superlattice (311111) peak in FCI quasicrystal during MM in IQC-30Sn (b); Structural transformation of IQC to crystalline phases (c). .....	73
<b>Figure 3. 5:</b> Deconvolution of IQC-10Sn nanocomposite powder during MM showing the existence of IQC, Sn, and crystalline phase.....	74
<b>Figure 3. 6:</b> Variation of crystallite size and lattice strain of icosahedral quasicrystal and crystalline phases i.e. $\text{Al}_{13}\text{Fe}_4$ and B2-type $\text{Al}(\text{Cu}, \text{Fe})$ as a function of milling time in IQC-	

10Sn (a), IQC-20Sn (b), IQC-30Sn (c); Variation of crystallite size and lattice strain of Sn reinforcement in IQC-10Sn (d), IQC-20Sn (e) and IQC-30Sn (f) as a function of milling time respectively.....75

**Figure 3. 7:** Diffraction contrast images of IQC-10 Sn (a-c), IQC-20Sn (d-f) and IQC-30Sn (g-i); Bright field image of IQC matrix MM for 40h in IQC-10Sn (a), IQC-20Sn (d) and IQC-30Sn (g); Selected area diffraction pattern of IQC-10Sn (b), IQC-20Sn (e) and IQC-30Sn (h) corresponding to BF as shown in (a), (d) and (g) respectively; Darkfield images of IQC matrix MM for 40h in IQC-10Sn (c), IQC-20Sn (f) and IQC-30Sn (i).....77

**Figure 3. 8:** Diffraction contrast images of IQC – Sn nanocomposite showing the rod like Sn particles; (a), (d), and (g) bright-field image of Sn particle in IQC-10Sn, IQC-20Sn and IQC-30Sn respectively; (b), (e), and (h) SADP corresponding to BF image of Sn in IQC-10Sn, IQC-20Sn, IQC-30Sn respectively; (c), (f), and (i) dark-field image of Sn particles in IQC-10Sn, IQC-20Sn, and IQC-30Sn respectively.....79

**Figure 3. 9:** Phase contrast images of IQC-30Sn nanocomposite powder showing the presence of nanocrystalline B2-type phases (a & b) and co-existence of B2-type phase with Al<sub>13</sub>Fe<sub>4</sub> phase (c & d).....80

**Figure 3. 10:** STEM – EDS mapping of IQC – 30Sn nanocomposite powder.....81

**Figure 3. 11:** SEM micrograph of IQC-10Sn (a, d), IQC-20Sn (b, e), and IQC-30Sn (c, f). ....84

**Figure 3. 12:** Particle size distribution of IQC matrix MM for 40 h (a) IQC-10Sn, (b) IQC-20Sn, (c) IQC-30Sn; Grain size distribution of IQC matrix MM for 40 h in (d) IQC-10Sn, (e) IQC-20Sn, (f) IQC-30Sn .....85

**Figure 3. 13:** SEM-EDS mapping of IQC – 30Sn nanocomposite powder (a); Point EDS analysis, nominal composition, and the EDS spectrum of IQC – 30Sn (b).....87

**Figure 3. 14:** Dynamic differential scanning calorimetry thermogram of IQC-10Sn (a), IQC-20Sn (b) and IQC-30Sn (c) at a heating rate of 20 K/min, 30 K/min, 40 K/min and 50 K/min. ....92

**Figure 3. 15:** Phase evolution during annealing of IQC-30Sn 40 h MM powder in the temperature range of 300°C to 800°C for 10h (a); Blown-up image showing phase evolution of approximant phases of IQC during annealing of IQC-30Sn 40 h MM powder in the temperature range of 300°C to 800°C for 10h (b).....93

**Figure 3. 16:** Diffraction contrast images and nano-beam diffraction (NBD) of IQC-30 Sn MM for 40h followed by annealing at 800 °C for 10h (a-c) and (d-f) respectively. Bright-field image of annealed IQC-30Sn (a); selected area diffraction pattern of annealed IQC-30Sn (b); Dark field images of annealed IQC-30Sn (c). NBD is showing (d) Al<sub>13</sub>Fe<sub>4</sub> phase, (e) B2-type Al(Cu, Fe) phase and (f) pseudo-five fold (5-f) axis of symmetry.....94

<b>Figure 3. 17:</b> SEM micrograph of IQC-30Sn MM for 40 h followed by annealing treatment at 800 °C for 10 h. The distribution of IQC phases along with Sn particles and approximant phases (a); IQC phase along with crystalline phases at higher magnification (b); EDS spectrum of point-1 (marked in blue) in Figure 3.17 (a) representing composition near to IQC phase (c); EDS spectrum of point-3 (marked in green) in Figure 3.17 (a) representing existence of rod-like Sn particle (d).....	97
<b>Figure 3. 18:</b> Microhardness (at an indentation load of 10 g) of IQC – Sn nanocomposite powders as a function of the duration of mechanical milling.....	99
<b>Figure 3. 19:</b> Load versus depth of indentation plot for IQC-10Sn (a), IQC-20Sn (b) and IQC-30Sn (c) as a function of milling duration; Variation of Hardness with milling time for IQC-10, 20 & 30Sn (d). .....	100
<b>Figure 3. 20:</b> Optical micrograph showing indentation mark on the IQC – 10Sn (a, b), IQC – 20Sn (c, d), and IQC – 30 Sn nanocomposite powder MM for 20 h and 40 h (e, f). ...	101
<b>Figure 3. 21:</b> Phase analysis of IQC – Sn composite SPSed at 800 °C (1073 K).....	103
<b>Figure 3. 22:</b> SEM micrograph of (a, d) IQC – 10Sn, (b, e) IQC – 20Sn, (c, f) IQC – 30Sn bulk composite SPSed at 800 °C (1073 K) at different magnification. ....	104
<b>Figure 3. 23:</b> Compressive stress-strain plot for (a) IQC – 10Sn, (b) IQC – 20Sn, (c) IQC – 30Sn bulk SPSed composite. ....	106
<b>Figure 3. 24:</b> Hardness value of (a) hot-pressed and (b) pressure-less sintered IQC-Sn bulk composite at different indentation loads. ....	108
<b>Figure 3. 25:</b> Optical micrograph showing indentation marks on as-cast and annealed IQC at a load of (a) 200 g and (b, c) 500 g. ....	109
<b>Figure 3. 26:</b> Optical micrograph showing indentation cracks in IQC – 10Sn hot-pressed composite; (a) sintered at 650 °C (923 K) (b) sintered at 650 °C (923 K) and (c & d) hot-pressed and annealed at 800 °C (1023 K). ....	109
<b>Figure 4. 1:</b> Phase analysis of 6082 Al alloy (a) and as-cast and annealed Al-Cu-Fe IQC alloys (b). .....	127
<b>Figure 4. 2:</b> SEM micrograph showing the morphology (a) of as received 6082 Al alloy and (b) as-cast & annealed Al-Cu-Fe IQC alloys; (c) EDS spectrum showing the chemical composition of as-cast and annealed Al-Cu-Fe IQC alloy. ....	128
<b>Figure 4. 3:</b> X-ray diffraction pattern of AA 6082 Al alloy milled for various time duration. ....	129
<b>Figure 4. 4:</b> X-ray diffraction pattern of Al-30IQC composite milled for various time duration. ....	130

<b>Figure 4. 5:</b> Phase analysis of Al-40IQC NC powder MM upto 50h (a); Structural transformation of IQC phase and approximant phases in Al-40IQC NC powder MM upto 50 h (b).....	131
<b>Figure 4. 6:</b> Variation of crystallite size and lattice strain of (a) Al–0IQC, (b) Al–10IQC, (c) Al–20IQC, (d) Al–30IQC, (e) Al–40IQC nanocomposite powder after mechanical milling for various duration of time.....	132
<b>Figure 4. 7:</b> Diffraction contrast images of Al-0IQC and Al-40IQC NC powder MM upto 50 h. Bright-field image of (a) Al-0IQC and (d) Al-40IQC NC powder; the SAD pattern of (b) Al-0IQC and (e) Al-40IQC NC powder; Darkfield image of (c) Al-0IQC and (f) Al-40IQC NC powder.....	133
<b>Figure 4. 8:</b> Representative TEM image (a), corresponding SAD pattern (b), HRTEM image (c) and (d) magnified HRTEM image of Al-40IQC NC powder MM upto 50 h..	134
<b>Figure 4. 9:</b> HAADF-STEM-EDS elemental map and corresponding EDS spectrum showing the distribution of Al, Cu and Fe in Al-40IQC NC powder MM upto 50 h.....	135
<b>Figure 4. 10:</b> SEM micrograph showing the morphology and nanostructured grains in (a, e) Al-0IQC, (b, f) Al-10IQC, (c, g) Al-20IQC, (d, h) Al-30IQC nanocomposite powder MM for 50 h.....	137
<b>Figure 4. 11:</b> Grain size distribution of (a) Al–0IQC, (b) Al–10IQC, (c) Al–20IQC, (d) Al–30IQC nanocomposite powder mechanically milled for 50 h. ....	138
<b>Figure 4. 12:</b> (a and b) Morphology and particle size distribution of Al-40IQC MM for 50 h respectively; (c) variation of particle size w.r.t volume fraction of reinforcement; (d) variation of particle size w.r.t milling duration in Al-40IQC NC powder.....	139
<b>Figure 4. 13:</b> Phase analysis of Al-40IQC NC powder SPSed at (a) 450 °C and (b) 550 °C; Diffraction contrast image showing (c) Bright field and (d) SAD pattern of Al-40IQC composite SPSed at 550 °C.....	140
<b>Figure 4. 14:</b> Back-scattered SEM micrograph showing the distribution of Al matrix and reinforcement particles at different magnification for Al-40IQC NC powder SPSed at 450 °C (a & b) and 550 °C (c & d). .....	142
<b>Figure 4. 15:</b> SEM-EDS elemental map showing the distribution of Al, Fe, Cu, Mg and Si in Al-40IQC composite SPSed at 450 °C at the interface of matrix and reinforcement..	144
<b>Figure 4. 16:</b> SEM-EDS elemental map showing the distribution of Al, Fe, Cu, Mg and Si in Al-40IQC composite SPSed at 550 °C at the interface of matrix and reinforcement..	145
<b>Figure 4. 17:</b> Phase analysis of Al-30IQC SPSed at 300 °C (573 K) with a pressure of 500 MPa; (b) enlarged view showing the co-existence of Al, IQC and crystalline phases....	146

<b>Figure 4. 18:</b> BSE-SEM micrograph of Al-30IQC SPSed at 300 °C (573 K) with a pressure of 500 MPa.....	147
<b>Figure 4. 19:</b> Engineering compressive stress – strain diagram of Al-40IQC SPSed at 550 °C (823 K).....	147
<b>Figure 4. 20:</b> Engineering compressive stress – strain diagram of (a) Al-0IQC, (b) Al-10IQC, (c) Al-20IQC, (d) Al-30IQC composite SPSed at 300 °C (573 K) with a pressure of 500 MPa.....	148
<b>Figure 4. 21:</b> Fractography of (a, b, c) Al-0IQC, (d, e, f) Al-10IQC, (g, h, i) Al-20IQC, (j, k, l) Al-30IQC SPSed at 300 °C (573 K) with a pressure of 500 MPa.....	149
<b>Figure 5. 1:</b> XRD pattern of (a) as-cast and (b) powdered non-equiautomic HEA. ....	165
<b>Figure 5. 2:</b> Enlarged and de-convoluted XRD pattern showing the co-existence of B2-type phase and C <sub>5</sub> Si <sub>3</sub> phase in (a, b) as-cast HEA and (c, d) powdered HEA, respectively. ....	166
<b>Figure 5. 3:</b> (a) Bright-field image and (b) selected area diffraction (SAD) pattern showing the powder particle corresponding to B2-type phase respectively; (c) Bright-field image and (d) SAD pattern showing the powder particle corresponding to Cr <sub>5</sub> Si <sub>3</sub> phase respectively. ....	167
<b>Figure 5. 4:</b> (a) SEM micrograph of as-cast HEA sample, (b) SEM micrograph showing the region of EDS point analysis. (c) SEM micrograph showing the morphology of fragmented as-cast powdered HEA sample, (d) Particle size distribution of fragmented powder HEA particles; (e) EDS spectrum of as-cast HEA.....	168
<b>Figure 5. 5:</b> SEM-EDS elemental mapping showing the distribution of alloying elements along with the presence of Cr, Si-rich region in as-cast HEA. ....	169
<b>Figure 5. 6:</b> SEM-EDS elemental mapping showing the distribution of alloying elements along with the presence of Cr, Si-rich region in as-cast powdered HEA. ....	170
<b>Figure 5. 7:</b> Phase analysis of (a) Al-10HEA nanocomposite powder MM up to 50 h; (b) enlarged image showing co-existence of Al, B2-type and Cr <sub>5</sub> Si <sub>3</sub> phase. ....	171
<b>Figure 5. 8:</b> Phase analysis of (a) Al-30HEA nanocomposite powder MM up to 50 h; (b) enlarged image showing co-existence of Al, B2-type and Cr <sub>5</sub> Si <sub>3</sub> phase. ....	172
<b>Figure 5. 9:</b> Variation of crystallite size and lattice strain during mechanical milling of (a) Al-10HEA, (b) Al-20HEA, (c) Al-30HEA.....	173
<b>Figure 5. 10:</b> TEM micrograph of Al-30HEA nanocomposite showing the (a) bright-field image (b) corresponding selected area diffraction pattern, (c) dark field image, and (d) grain size distribution in nanocomposites.....	175

<b>Figure 5. 11:</b> SEM micrograph of Al-HEA nanocomposite powder showing morphology after 50 h of MM in Al-10HEA (a, b), Al-20HEA (c,d), and Al-30HEA at different magnification.....	177
<b>Figure 5. 12:</b> Particle size distribution of (a) Al-10HEA (b) Al-20 HEA and (c) Al-30HEA nanocomposite powder mechanically milled up to 50 h.....	179
<b>Figure 5. 13:</b> DSC thermogram of (a) as-cast powdered non-equiatomic HEA; (b) Al-30HEA nanocomposite at a 20 K/min scan rate.....	180
<b>Figure 5. 14:</b> In-situ XRD pattern ( $\lambda=0.15402$ nm) of Al-30HEA at high temperatures.....	181
<b>Figure 5. 15:</b> SEM micrograph of (a & d) Al-10HEA, (b & e) Al-20HEA, (c & f) Al-30HEA consolidated by pressure-less sintering.....	184
<b>Figure 5. 16:</b> SEM-EDS mapping of Al-30HEA composite consolidated by pressure-less sintering.....	185
<b>Figure 5. 17:</b> Load versus indentation depth plot for (a) Al-10HEA (b) Al-20HEA and (c) Al-30HEA composite; (d) variation of hardness and depth of indentation as a function of volume fraction of HEA reinforcement in Al-HEA pressure-less sintered composite....	186
<b>Figure 5. 18:</b> Property diagram for non-equiatomic AlSiCrMnFeNiCu HEA by ThermoCalc.....	192

## **LIST OF TABLES**

<b>Table 1. 1:</b> Important binary and ternary phases in Al-Cu-Fe alloy system [60]. .....	10
<b>Table 1. 2:</b> Non-equilibrium processing routes for the synthesis of quasicrystals [60]... <td>13</td>	13
<b>Table 1. 3:</b> Mechanical properties of AMCs reinforced with Al-based quasicrystals. ....	31
<b>Table 1. 4:</b> Mechanical properties of AMCs reinforced with HEA particulates processed through various techniques. ....	39
<b>Table 2. 1:</b> Designation of composite synthesized in the present investigation. ....	50
<b>Table 2. 2:</b> Physical properties of elements used for the synthesis of alloys and composites. ....	51
<b>Table 2. 3:</b> Chemical composition of gas atomized 6082 Al alloy powder used for AMCs. ....	53
<b>Table 2. 4:</b> Weight fraction of matrix and reinforcement used for the synthesis of nanocomposites.....	54
<b>Table 2. 5:</b> Protocol for mechanical milling of nanocomposite powders. ....	56
<b>Table 2. 6:</b> Processing parameters of IQC-Sn and Al-IQC composites during SPS.....	58
<b>Table 3. 1:</b> Variation of Crystallite size and lattice strain in IQC-Sn nanocomposites..	76
<b>Table 3. 2:</b> Variation of particle size and grain size in IQC-Sn nanocomposite powder.	90
<b>Table 3. 3:</b> Chemical composition of IQC-Sn nanocomposite powder derived from SEM-EDS. ....	91
<b>Table 3. 4:</b> Activation energy calculation for phase evolution during heating of IQC-Sn milled powder. ....	96
<b>Table 3. 5:</b> Chemical composition of corresponding to point-1, 2, and 3 as marked in Figure 3.17 (a) with blue, green, and red circles, respectively. ....	98
<b>Table 3. 6:</b> The hardness of IQC-Sn milled powder. ....	102
<b>Table 3. 7:</b> Physical and mechanical properties of IQC – Sn bulk SPSed composite. ..	107
<b>Table 3. 8:</b> Fracture toughness of IQC–Sn hot-pressed composite.....	112
<b>Table 3. 9:</b> Parameters for estimating minimum grain/crystallite size during MM. ....	118

<b>Table 4. 1:</b> Crystallite size and lattice strain during mechanical milling of Al – IQC nanocomposite powder .....	131
<b>Table 4. 2:</b> Elemental composition of phases in Al-40IQC composite SPSed at 450 °C (723 K) and 550 °C (823 K).....	143
<b>Table 4. 3:</b> Physical and mechanical property of SPSed Al-40IQC matrix composite .	151
<b>Table 4. 4:</b> Physical and mechanical property of Al-IQC matrix composite SPSed at 300 °C (573 K) with a pressure of 500 MPa.....	152
<b>Table 5. 1:</b> Crystallite size, lattice strain, and dislocation density of the Al-HEA nanocomposite powder as a function of milling duration and volume fraction of reinforcement.....	174
<b>Table 5. 2:</b> Elemental composition of as – cast non-equiautomic AlSiCrMnFeNiCu HEA.	176
<b>Table 5. 3:</b> Hardness of Al-HEA pressure-less sintered composite.....	187
<b>Table 5. 4:</b> Chemical enthalpy of mixing ( $\Delta H^{\text{mix}}_{ij}$ , kJ/mol) of atomic pairs for non-equiautomic AlSiCrMnFeNiCu HEA alloy following the Miedema's approach [404–406].	190
<b>Table 5. 5:</b> Calculate thermodynamic and physical parameter of non-equiautomic AlSiCrMnFeNiCu HEA.....	190
<b>Table 5. 6:</b> Physical properties of alloying elements in non-equiautomic HEA.....	197

## ABBREVIATIONS

<b>QC</b>	Quasicrystal
<b>HEA</b>	High Entropy Alloy
<b>MMC</b>	Metal Matrix Composite
<b>AMC</b>	Aluminium Matrix Composite
<b>IQC</b>	Icosahedral Quasicrystal
<b>NC</b>	Nanocomposite
<b>HP</b>	Hot Pressing
<b>VHP</b>	Vacuum Hot Pressing
<b>CP</b>	Cold Pressing
<b>CIP</b>	Cold Isostatic Pressing
<b>BCC</b>	Body Centered Cubic
<b>OM</b>	Optical Microscopy
<b>DSC</b>	Differential Scanning Calorimeter
<b>EDS/EDX</b>	Energy Dispersive X- ray Spectroscopy
<b>FCC</b>	Face Centered Cubic
<b>FSP</b>	Friction Stir Processing
<b>SFSP</b>	Submerged Friction Stir Processing
<b>HADDF</b>	High Angle Annular Dark Field
<b>HIP</b>	Hot Isostatic Pressing
<b>HE</b>	Hot Extrusion
<b>HRTEM</b>	High Resolution Transmission Electron Microscopy
<b>MA</b>	Mechanical Alloying
<b>MM</b>	Mechanical Milling
<b>HEM</b>	High Energy Ball Milling
<b>HT</b>	Heat Treatment
<b>PCA</b>	Process Control Agent
<b>SEM</b>	Scanning Electron Microscopy
<b>SLM</b>	Selective Laser Melting
<b>SPS</b>	Spark Plasma Sintering

<b>STEM</b>	Scanning Transmission Electron Microscopy
<b>TEM</b>	Transmission Electron Microscopy
<b>VEC</b>	Valence Electron Concentration
<b>VIM</b>	Vacuum Induction Melting
<b>VAM</b>	Vacuum Arc Melting
<b>XRD</b>	X-Ray Diffraction

## SYMBOLS

<b>A</b>	Lattice Parameter
<b>β</b>	Beta
<b>°C</b>	Degree Centigrade
<b>K</b>	Kelvin
<b>N</b>	Newton
<b>Pa</b>	Pascal
<b>MPa</b>	Megapascal
<b>GPa</b>	Gigapascal
<b>θ</b>	Theta
<b>Ψ</b>	Chi
<b>δ</b>	Delta
<b>Ω</b>	Omega
<b>m</b>	Meter
<b>µm</b>	Micrometer (micron)
<b>nm</b>	Nanometer
<b>at%</b>	Atomic Percent
<b>wt%</b>	Weight Percent
<b>mm</b>	Millimeter
<b>g</b>	Gram
<b>l</b>	Litre
<b>ml</b>	Millitre
<b>J</b>	Joule
<b>cm</b>	Centimeter
<b>h</b>	Hour
<b>min</b>	Minute
<b>s</b>	Second
<b>R</b>	Ideal Gas Constant
<b>&lt;</b>	Less than
<b>&gt;</b>	Greater than

$\sigma$	Sigma
$\text{\AA}$	Angstrom
$\lambda$	Wavelength
<b>HV</b>	Vickers Hardness
