Preface xii

1 Introduction 1
- 1.1 Fractional Calculus . . . 1
  - 1.1.1 Classical fractional derivative . . . 2
  - 1.1.2 Fractional operator with non-singular kernel . . . 5
  - 1.1.3 Variable order fractional derivative and integration [4] . . . 5
- 1.2 Diffusion Phenomena . . . 7
  - 1.2.1 Derivation of diffusion equation [6] . . . 7
- 1.3 Application of diffusion equation . . . 13
  - 1.3.1 Medical Science [7] . . . 13
  - 1.3.2 Geological Science [8] . . . 14
  - 1.3.3 Chemical Science [9] . . . 14
  - 1.3.4 Physical Science [10] . . . 14
  - 1.3.5 Ground water contamination problem [11] . . . 15
  - 1.3.6 Economics [12] . . . 15
- 1.4 Numerical methods . . . 15

2 Operational matrix method for solving nonlinear space-time fractional order reaction-diffusion equation based on Genocchi polynomial 18
- 2.1 Introduction . . . 18
- 2.2 Preliminaries . . . 23
  - 2.2.1 Genocchi polynomial and its properties [13, 14] . . . 24
- 2.3 Approximation of a arbitrary function . . . 26
- 2.4 Genocchi operational matrix of fractional derivative [15] . . . 26
  - 2.4.1 Lemma . . . 26

2.5 Error bound and stability analysis . . . 28
2.6 Solution of the problem . . . 30
2.7 Results and discussion . . . 32
2.8 Conclusion . . . 39

3 Numerical solution of two dimensional reaction-diffusion equation using operational matrix method based on Genocchi polynomial 41
3.1 Introduction . . . 41
3.2 Preliminaries . . . 42
3.2.1 Kronecker product of two matrix . . . 42
3.2.2 Approximation of an arbitrary function . . . 43
3.2.3 Genocchi operational matrix of fractional derivative . . . 43
3.3 Error bound and stability analysis . . . 44
3.4 Solution of the problem . . . 46
3.5 Results and discussion . . . 49
3.6 Conclusion . . . 55

4 Gegenbauer wavelet operational matrix method for solving variable order non-linear reaction-diffusion and Galilei invariant advection-diffusion equations 57
4.1 Introduction . . . 57
4.2 Preliminaries . . . 60
4.2.1 Variable-order derivatives of Type 1($V1$) and Type 2($V2$) . . . 60
4.2.2 Gegenbauer polynomial and Gegenbauer wavelet . . . 61
4.3 Function Approximation . . . 63
4.4 Error bound and stability analysis . . . 64
4.5 Operational matrix of derivative . . . 68
4.5.1 Gegenbauer wavelet operational matrix of variable-order fractional derivative . . . 69
4.6 Proposed model . . . 72
4.7 Description of proposed method . . . 73
4.8 Results and discussion . . . 75
4.9 Conclusion . . . 85

5 Analysis of tumor cells in the absence and presence of chemotherapeutic treatment: The case of Caputo-Fabrizio time fractional derivative 86
5.1 Introduction . . . 86
5.2 Derivation of C-F fractional differential operational matrix . . . 90
5.2.1 Approximate expression of C-F derivative of simple polynomial function . . . 90
5.2.2 Chebyshev polynomials [16] . . . 91

5.3 Description of model representing the chemotherapy effect on behavior of tumor cells . . . 96
5.4 Solution of the problem . . . 99
5.5 Numerical simulation and results . . . 101
5.5.1 Variation of tumor cells when chemotherapy drug is not injected 103
5.5.2 Behavior of tumor cells after applying chemotherapeutic treatment . . . 104
5.5.3 Discussion of the nature of model in fractional order system and future scope . . . 105
5.6 Conclusion . . . 107

6 Conclusion and scope of future work **109**

Bibliography **112**

List of Figures

1.1 Minion 9

2.1 Plots of $u(x,t)$ vs. x and t for $M=3$ in case of approximate solution. 34
2.2 Plots of $u(x,t)$ vs. x and t for $M=3$ in case of exact solution. 34
2.3 Plots of $u(x,t)$ vs. x for various α at t=1 when $\lambda=-1$, $\beta=1$. 36
2.4 Plots of of $u(x,t)$ vs. x for various β at t=1 when $\lambda=-1$, $\alpha=1$. . . 36
2.5 Plots of $u(x,t)$ vs. x for different values of λ at t=1 when $\alpha=1, \beta=1, \psi(x,t)=0$. 38
2.6 Plots of $u(x,t)$ vs. x for different values of λ at t=1 when $\alpha=1, \beta=1, \psi(x,t)=x-xt^2$. 39

3.1 Plots of $u(x,y,t)$ vs. x and y for $M=4$ in case of numerical and exact solution for $t=0.5$. 51
3.2 Plots of $u(x,y,t)$ vs. x and y for $M=4$ in case of numerical and exact solution for $t=0.5$. 52
3.3 Plots of $u(x,y,t)$ vs. x and y for various α at t=0.5 when $\kappa_3=1$, $\beta=\gamma=2$. 53
3.4 Plots of $u(x,y,t)$ vs. x and y for various β at t=0.5 when $\kappa_3=1$, $\alpha=1, \gamma=2$. 54
3.5 Plots of $u(x,y,t)$ vs. x and y for various γ at t=0.5 when $\kappa_3=1$, $\beta=2, \alpha=1$. 54
3.6 Plots of $u(x,y,t)$ vs. x and y for various β at t=0.5 when $\beta=2$, $\alpha=1, \gamma=2$. 55

4.1 Plots of $u(x,t)$ for $\hat{m}=4$ and $\lambda=2$ in case of numerical and exact solution for $t=0.5$. 77
4.2 Plots of $u(x,t)$ for $\hat{m}=4$ and $\lambda=2$ in case of numerical and exact solution for $t=0.5$. 78
4.3 Plots of $u(x,t)$ for $\hat{m}=4$ and $\lambda=2$ in case of numerical and exact solution for $t=0.5$. 80
4.4 Plots of $u(x,t)$ for $\hat{m}=4$ and $\lambda=2$ in case of numerical and exact solution for $t=0.5$. 81
4.5 Behavior of $u(x,t)$ for $\hat{m}=4$ and $\lambda=2$ at $t=0.5$. 81
4.6 Behaviour of $u(x,t)$ for $\hat{m}=4$ and $\lambda=2$ at $x=0.5$. 82

4.7 Behaviour of $u(x,t)$ for $\hat{m}=4$ and $\lambda=2$ at $x=0.5$. 82
4.8 Plots of $u(x,t)$ for $\hat{m}=4$ and $\lambda=2$ in case of numerical and exact solution for $t=0.5$. 84

5.1 Growth of tumor cells at different time periods in absence of chemotherapeutic (a) for integer order system $(\alpha=1,\beta=1,\gamma=1,\zeta=1)$ (b) for C-F fractional order system $(\alpha=0.9,\beta=0.9,\gamma=0.9,\zeta=0.9)$. . 104
5.2 Graphical representation of tumor cells in presence of chemotherapeutic drug with different time intervals. 105
5.3 Plots of normal cells $N(x,t)$ for different values of α 106
5.4 Plots of tumor cells $T(x,t)$ at different values of β 106
5.5 Plots of Immune cells $I(x,t)$ for different values of γ 107
5.6 Plots of concentration of chemotherapeutic drug $U(x,t)$ for different values ζ. 107
5.7 Dynamics of tumor cells at time $t=0.5$ with different immune levels. 108
