i Introduction and Literature Review 1

1 Introduction and Literature Review 3
1.1 Introduction . . . 3
1.2 The Origin of HPM . . . 5
1.3 Overview and Development of Various HPM Tubes . . . 6
1.3.1 Relativistic Backward Wave Oscillator (RBWO) . . . 6
1.3.2 Relativistic Magnetron (RM) . . . 7
1.3.3 Relativistic Klystron Amplifier (RKA) and, Relativistic Klystron Oscillator (RKO) . . . 9
1.3.4 Magnetically Insulated Line Oscillator (MILO) . . . 11
1.3.5 Split Cavity Oscillator (SCO) . . . 14
1.3.6 Transit-Time Oscillator (TTO) . . . 15
1.3.7 Plasma Assisted Slow-wave Oscillator (PASOTRON) . . . 16
1.3.8 Arletron . . . 17
1.4 Literature Review on Reltron . . . 18
1.4.1 Time-line of reltron deveopment . . . 19
1.4.2 Literature review . . . 21
1.4.3 Standpoint of Reltron . . . 29
1.5 Motivation and Problem Definition . . . 30
1.5.1 Motivation . . . 30
1.5.2 Problem definition . . . 30
1.6 Plan and Scope . . . 31
1.7 Conclusion . . . 32

ii Parametric Study of Normal Mode Frequencies and Cold-test Results[†] 33

2 Parametric Study of Normal Mode Frequencies and Cold-test Results **35**
2.1 Introduction . . . 35
2.2 Concept of the Design . . . 36
2.2.1 Beam injector . . . 36
2.2.2 Modulation section . . . 37
2.2.3 Postacceleration section . . . 40
2.2.4 Extraction section . . . 40
2.3 Working Principle . . . 40
2.4 Attractive Features . . . 41
2.5 Mode Designation . . . 42
2.5.1 Eigenmode solver . . . 44
2.6 Parametric study of Normal Mode Frequencies . . . 45
2.7 Simulation of S-parameter . . . 46
2.7.1 Frequency-domain solver . . . 48
2.8 Calculation of Quality-factor and Cavity Reactance . . . 49
2.9 Construction of a Test-cavity and S_{11} Measurement . . . 51
2.9.1 Construction of test-cavity . . . 51
2.9.2 Cold-test results . . . 52
2.10 Conclusion . . . 53

iii Electromagnetic Analysis [§] **57**

3 Electromagnetic Analysis **59**
3.1 Introduction . . . 59
3.2 Magnetic Coupling in Dominant Pillbox-cavity Mode . . . 60
3.3 Normal Modes . . . 61
3.4 Dispersion Relation from Lumped-element Equivalent Circuit Model . . . 62
3.5 Conclusion . . . 68

iv PIC Simulation and Results[† §] **69**

4 PIC Simulation and Results **71**
4.1 Introduction . . . 71
4.2 PIC Solver of CST MWS . . . 71
4.3 Modeling and Simulation Set-up . . . 72
4.4 Results and Discussions . . . 75
4.4.1 Temporal port-signal and output power . . . 75
4.4.2 Oscillation frequency . . . 75
4.4.3 Temporal current signals . . . 77
4.4.4 Frequency tunability . . . 78
4.4.5 Phase-space plot . . . 79
4.4.6 Effect of Idler disc length (l_{idl}) and Coupling depth (d) on the device performance . . . 84
4.5 Conclusion . . . 85

v Performance Improvement[††] **89**

5 Performance Improvement **91**
5.1 Introduction . . . 91
5.2 Design of the DSC Reltron's Modulation Section . . . 92
5.3 Beam-absent (Cold) Simulation and Results . . . 93
5.3.1 Normal modes of DSC reltron . . . 93
5.3.2 S-parameter . . . 95
5.4 Beam-present (Hot) Simulation and Results . . . 97
5.5 Results and Discussions . . . 98
5.6 Conclusion . . . 102

vi Summary, Conclusion and Future scope **103**

6 Summary, Conclusion and Future scope **105**
6.1 Introduction . . . 105
6.2 Summary and Conclusion . . . 106
6.2.1 Chapter 1 . . . 106
6.2.2 Chapter 2 . . . 106
6.2.3 Chapter 3 . . . 108
6.2.4 Chapter 4 . . . 109
6.2.5 Chapter 5 . . . 109
6.3 Limitation of Present Work and Further Scope . . . 111

References **113**

Author's Relevant Publication **123**

List of Figures

1.1 Schematic diagram of RBWO (a) with resonant reflector [Guinn *et al.* (1998)], and (b) with electron collector [Chen *et al.* (2002)]. 6
1.2 (a) Interconnection geometries of phased locked RM [Levine *et al.* (1991)], and (b) frequency-agile RM (RS10) [Levine *et al.* (1995)]. 8
1.3 Schematic diagram of tri-axial RKA [Friedman *et al.* (1993)]. 10
1.4 MILO in (a) bifrequency configuration [Chen *et al.* (2009)], and (b) a dual-band HPM source [Zhang et al. (2015)]. 13
1.5 SCO (a) fundamental mode, and (b) schematic of experiment [Marder *et al.* (1992)]. 14
1.6 Schematic diagram of (a) radial acceleretron [Arman (1996)], and (b) low-impedance TTO (LITTO) [Cao *et al.* (2009)]. 15
1.7 Schematic diagram of (a) rippled waveguide SWS PASOTRON, (b) helix-PASOTRON HPM source [Goebel *et al.* (1996)]. 16
1.8 Arletron (a) experimental set-up, and (b) MAGIC 3D simulation. [Gardelle *et al.* (2010)]. 18
1.9 Specific energy/pulse $\times$ efficiency versus power for a variety of HPM sources [Barker *et al.* (2001)]. 19
1.10 Schematic diagram of reltron [Miller *et al.* (1992)]. 20
1.11 Growth of microwave devices in terms of Pf^2 [Benford *et al.* (2007)]. . . 29

2.1 Schematic of reltron tube. 36
2.2 3D model of gridded reltron's modulation section (a) perspective view, and (b) cross-sectional view. 37
2.3 (a) Simulation model of the modulation section, and electric field vector-plots of (b) 0, (c) $\pi/2$, and (d)π mode, respectively [Miller *et al.* (1992)]. 43
2.4 (a), (b), and (c) electric field vector plot in 0, $\pi/2$ and π modes; (d), (e), and (f) contour plots of the respective modes in reltron modulation cavity using MAGIC. 44
2.5 Frequencies of resonant mode (GHz) vs. cavity dimension (mm) – (a) length of main cavity, (b) radius of main cavity radius, (c) length of side cavity, (d) radius of side cavity, (e) length of idler disc, (f) radius of idler disc, and (g) depth of coupling. 46
2.6 An enlarged view of waveguide port on SMA connector for obtaining S_{11}. 47
2.7 Simulated S-parameter of reltron modulation section. Marker 1, 2 and 3 correspond to 0, $\pi/2$, and π mode, respectively. 48
2.8 Impedance locus of S_{11}. Marker 1, 2, and 3 correspond to complex impedance in 0, $\pi/2$, and π mode, respectively. 50

2.9 Equivalent model of reltron cavity for obtaining cavity reactance. 50
2.10 Construction of reltron modulation section showing– (a) different parts of the cavity, (b) the main cavity being joined with the side cavity by gas welding, and (c) final structure. 51
2.11 (a) Experimental set-up, and (b) measured S_{11}. 53
2.12 Combined picture of simulated and measured S_{11}. 54

3.1 Electric field and surface current in dominant TM_{010} mode in a pillbox cavity shown in– (a) and (b) perspective view, (c) and (d) cross-sectional view. 61
3.2 Disassembled schematic diagram of reltron modulation section. 62
3.3 Equivalent circuit model of reltron modulation section. 62
3.4 (a) Model of reltron modulation section in MAGIC 3D (end wall of the coupling cavity is not shown), and (b) contour plot of $\pi/2$ mode in the cavity cross sectional view along y-z plane. 65
3.5 Mode frequencies at different (d) from CST MWS, and MAGIC. 67
3.6 Variation of ω_c and k with coupling depth (d). 67

4.1 Cross sectional view of S-band reltron showing different sections, and the coupling depth (d). 73
4.2 Temporal signals from the waveguide ports for different coupling depth (d). 75
4.3 Total output power for different coupling depth (d). 76
4.4 The spectrum of port signal for different coupling depth (d), showing the fundamental modes and their harmonics. An enlarged view of the fundamental mode is shown inset. 76
4.5 Temporal currents at (a) cathode, (b) first cavity, (c) second cavity, and (d) collector. 77
4.6 Frequency tunability achievable by varying the dimensional parameters of modulation section. 78
4.7 Electron positions in real space. Color-bar shows the normalized momentum. 79
4.8 Phase space plot of electron energy (eV). Three combined frames showing (a) deceleration in the first cavity and acceleration in the second, (b) acceleration in the first cavity and deceleration in the second. 80
4.9 Phase space plot showing energy of electrons (eV) during a complete cycle of oscillation (part 1 of 2). 81
4.10 Phase space plot showing energy of electrons (eV) during a complete cycle of oscillation (part 2 of 2). 82
4.11 Phase space plot showing normalized momentum vs position at an instant of (a) first and (b) second half cycle of RF oscillation. The dotted lines indicate different sections. 83
4.12 Reduction in (a) energy spread, and (b) velocity spread in the post acceleration section, with respect to the modulation section,respectively. 83
4.13 Output power (W) at different idler disc lengths (mm). 84
4.14 Fourier transform of output port signals for l_idl = (a) 10 mm, (b) 11 mm, (c) 12 mm, and (d) 13 mm. 85

5.1 The modulation section of a DSC reltron. (a) Perspective view (cavity side-walls are made transparent for a better view) and, (b) cross-sectional view. 92
5.2 A cross-sectional view of the modulation section of a DSC reltron showing vector plots of (a) mode 0: 2.649481 GHz, (b) mode $\pi/2$: 2.763429 GHz, (c) mode pseudo-$\pi/2$: 2.806426 GHz and, (d) mode π: 3.067092 GHz, respectively. 94
5.3 A cross-sectional view of the modulation section of a DSC reltron showing contour plots of (a) mode 0: 2.649481 GHz, (b) mode $\pi/2$: 2.763429 GHz, (c) mode pseudo-$\pi/2$: 2.806426 GHz and, (d) mode π: 3.067092 GHz, respectively. 94
5.4 Simulated S-parameter of DSC reltron modulation section from (a) Frequency-domain solver, and (b) Transient solver (inset: without AR-filtering). Marker 1, 2, and 3 correspond to 0, $\pi/2$, and π mode, respectively. 96
5.5 The cross-sectional view of a DSC grid-less reltron with dual extraction cavity. 98
5.6 (a) Port signals ($\sqrt{W}$) from one of the extraction cavity for fixed cathode potential of 100 kV, (b) the corresponding first harmonics. 99
5.7 Spectrum of the port signals in (a) fundamental mode, and (b) first harmonics. Data markers indicate the frequencies (GHz) and corresponding amplitudes (V/m/GHz). 99
5.8 Contour plot of electrostatic potential for cathode potential of 100 kV and PA potential of (a) 200 kV and (b) 400 kV respectively. 100
5.9 Temporal current (Amp) at (a) cathode, (b) first cavity, (c) second cavity and, (d) collector 101
5.10 Phase space plot in two opposite cycles of the RF oscillation. 101
5.11 Temporal field amplitude of fundamental mode of – (a) conventional, and (b) double side-cavity reltron. 102

List of Tables

1.1 Summary of experimental developments on reltrons 28

2.1 Comparison of normal mode frequencies (GHz) between MAGIC, and CST (Eigenmode) 43
2.2 Dimensions of the modulation cavity for maximum mode separation. . . . 47
2.3 Comparison of normal mode frequencies (GHz), and that of S_{11} minima. . 48
2.4 Quality factors, inductance and capacitance of the cavity in respective modes 50
2.5 Frequencies (GHz) of measured, and simulated S_{11} minima. 53
2.6 Summary of change in resonant mode frequencies with cavity parameters. 55

3.1 Resonant frequencies at different d, and the corresponding ω_c and k. . . . 67

4.1 Dimensions and Materials Used in PIC Simulation 74
4.2 Frequency, Output power and efficiency at different idler disc length . . . 85
4.3 Summary of frequency and efficiency at different coupling depth 86

5.1 Dimensions of the modulation section. 93
5.2 Comparison among frequencies (GHz) of normal modes (Eigenmode solver) and S-parameter minima from Freq. domain (F.D.) solver, and Transient (T.D.) solver 97
5.3 Parameters and dimensions used in PIC simulation 97
5.4 Estimation of output power and efficiency. 100
