

List of Table

Table No.	Title	Page No.
Table 1.1	Various grades of low carbon steel with chemical compositions	1
Table 1.2	Texture fibers in rolled BCC materials	42
Table 1.3	Main ideal orientations in rolling texture of BCC materials	43
Table 1.4	Ideal orientations in simple shear of BCC materials	46
Table 1.5	Mechanical properties and grain refinement details of low carbon steels processed using SPD methods	57
Table 2.1	Designations of as-received and ECAPed low carbon steel samples.	68
Table 2.2	Designation of samples of ECAP followed by cold-rolling or cryo-rolling.	68
Table 2.3	Designation of low carbon steel specimen after ECAP followed by cold-rolling or cry-rolling, and flash annealing.	70
Table 3.1	Details of microstructural parameters of as-received and ECAPed low carbon steel.	93
Table 4.1	Texture components in $\{110\}$ pole figure of low carbon steel at various equivalent strains.	120
Table 4.2	Texture intensity of important texture components of low carbon steel in ODFs of $\varphi_2=0^\circ$ and 45° with equivalent strain.	125
Table 4.3	Deviation of Components from ideal positions in ECAPed low carbon steel.	126
Table 4.4	Deviation of Components from ideal positions in ECAPed IF steel [Verma ^a et al. 2016].	127
Table 5.1:	Mechanical properties of low carbon steel.	137
Table. 6.1	Details of microstructure of the low carbon steel in various conditions.	158
Table 6.2:	Details of misorientation angle and dislocation density of low carbon steel.	158
Table 6.3	Microstructural parameters and hardness of flash annealed low carbon steels.	170

Table 7.1	Mechanical properties of deformed and annealed low carbon steels.	180
Table 7.2	Mechanical properties of low carbon steels processed by ECAP followed by cryo-rolling and flash annealing.	185
Table 7.3	Size and area fraction of dimple and cleavage areas in low carbon steel.	189
