Abstract **v**

List of Figures **xi**

Nomenclature **xv**

List of Tables **1**

1 Introduction **3**

1.1 Background 3

1.2 Photovoltaic Power Generation 5

1.3 Challenges in Photovoltaic (PV) System 6

1.4 Photovoltaic (PV) Cell or Solar Cell 6

1.5 Types of PV Cell 7

1.5.1 Monocrystalline PV Cell 7

1.5.2 Polycrystalline PV Cell 7

1.5.3 Thin-film PV Cell 8

1.6 Photovoltaic Energy Conversion Technology 10

1.7 Types of PV system 11

1.7.1 Grid-Connected PV System 12

1.7.2 Stand-Alone PV System 12

1.7.3 Hybrid PV System 13

1.8 DC-DC Converter 15

1.9 Motivation 15

1.10 Aim of the Thesis 15

1.11 Structure of the Thesis 16

2 Maximum Power Point techniques **17**

2.1 Introduction 17

2.2 Input Parameter Based MPPT Algorithms 17

2.3 Output Parameter Based MPPT Algorithms 18

2.4 Distributed MPPT Techniques 20

2.5 MPPT Algorithm Control Techniques 23

2.5.1 Reference Voltage Control 23

2.5.2 Reference Current Control 25

2.5.3 Direct Duty-Ratio Control 25

2.6 Maximum Power Point Tracking Parameters 27

2.6.1 Selecting Proper Perturbation Time T_s 27

2.6.2 Selecting Proper Perturbation Step-Size ΔD 27

2.7 Convergence Response of MPPT Algorithm 27

2.7.1 Convergence Time 28

2.7.2 Convergence Response 28

3 A Current Sensor Based Adaptive Step-Size MPPT With SEPIC Converter for PV Systems **29**

3.1 Introduction 29

3.2 The Linearity of PV Current with Insolation 31

3.2.1 Switching Function for SEPIC Converter 32

3.2.2 Switching Function for Buck Converter 35

3.2.3 Switching Function for Boost Converter 35

3.3 A Novel Adaptive MPPT Technique 37

3.4 Design of the SEPIC Converter 38

3.4.1 Duty-Cycle Consideration 40

3.4.2 Inductor Selection 40

3.4.3 Output capacitor selection 41

3.4.4 Coupling Capacitor Selection 41

3.4.5 Input Capacitor Selection 42

3.5 Simulation Results 42

3.5.1 Comparison Between Fixed And Adaptive Step-Size 43

...

3.5.2 Comparison Between Current And Voltage Sensor Based (VSB) MPPT Techniques 43
3.5.3 Simulation Results with Different Operating Conditions 45
3.5.4 Performance Comparison 49
3.6 Experimental Setup And Validation 53

4 Load Voltage-Based MPPT Technique for Standalone PV Systems Using Adaptive Step 61
4.1 Introduction 61
4.2 Problem Formulation 63
4.3 Analysis of Load Voltage Based MPPT Technique 65
4.4 Proposed Load Voltage Based MPPT Technique 66
4.4.1 LVB MPPT Technique with FSS 67
4.4.2 LVB MPPT Technique with ASS 67
4.5 Design and Operation of the SEPIC Converter 69
4.6 Transition Analysis 71
4.7 Simulation Results 72
4.7.1 Tracking Efficiency 74
4.7.2 Ropp Test 77
4.8 Hardware Implementation and Experimental Results Validation 78

5 Conclusions and Future Work 87
5.1 Summary and Contribution 87
5.2 Future Work 88

List of Figures

1.1 Global electricity consumption. 4
1.2 Electricity consumption in India. 4
1.3 India - source wise installed power generation capacity. 4
1.4 Monocrystalline PV module. 8
1.5 Polycrystalline PV module. 9
1.6 Thin-film PV module. 9
1.7 Formation of PV array from a PV cell. 10
1.8 Conversion mechanism of solar insolation into electricity. 11
1.9 Classification of PV systems. 11
1.10 Block diagram of grid-connected PV system. 12
1.11 Block diagram of stand-alone PV system with battery storage. 13
1.12 Block diagram of photovoltaic hybrid system. 14

2.1 I-V and P-V characteristics curve of PV module. 18
2.2 Block diagram of PV system with input parameter based MPPT controller. 19
2.3 Block diagram of PV system with output parameter based MPPT controller. 19
2.4 Types of MPPT methods. 20
2.5 Distributed PV system. 21
2.6 I-V characteristics of a PV array with three modules with different insolation. 22
2.7 P-V characteristics of a PV array with three modules with different insolation. 22
2.8 Grid connected DMPPT PV system with output ports connected in series. 23
2.9 Grid connected DMPPT PV system with output ports connected in parallel. 24
2.10 Reference voltage control MPPT technique for PV system. 25
2.11 Reference current control MPPT technique for PV system. 26
2.12 Direct duty-ratio control MPPT technique for PV system. 26

3.1 PV system with the MPPT controller. 33
3.2 Normalized variation of P_{pv}, S for a PV module. 34
3.3 Variation of S for a step change in insolation level. 36
3.4 Variation of S at steady-state. 36
3.5 PV power P_{pv} for different values of α. 38
3.6 Flow-chart of CSB MPPT Technique with adaptive step-size. 39
3.7 Circuit model of PV system with MPPT. 42
3.8 Convergence response of CSB MPPT technique using fixed and adaptive step-size with resistive load. (a) PV Current I_{pv} (b) PV Voltage V_{pv} (c) PV Power P_{pv} (d) Duty-cycle D. 44
3.9 PV power P_{pv} at steady-state. (a) Voltage sensor based MPPT. (b) Current sensor based MPPT. 46
3.10 Comparison of dynamic performance at $G = 800\ W/m^2$. 47
3.11 Switching functions vs duty-cycle $(S, Q - D)$ characteristics. 47
3.12 PV power P_{pv} with different loads. 48
3.13 Load power P_o with different loads. 48
3.14 PV power P_{pv} with RL and RC loads. 48
3.15 PV power P_{pv} with variable temperature. 49
3.16 PV power P_{pv} with different switching frequencies. 49
3.17 Comparison of adaptive current sensor based MPPT technique and enhanced auto scaling IncCond MPPT technique with resistive load. 51
3.18 Comparison of duty-cycle at steady state for CSB (ASS) MPPT and EAS IncCond MPPT techniques. 51
3.19 Comparison of adaptive current sensor based MPPT technique and enhanced auto scaling IncCond MPPT technique with battery load. 52
3.20 Experimental model of the PV system. 53
3.21 Convergence response of CSB MPPT technique using FSS with resistive load. (a) start-up at $G = 800\ W/m^2$ (b) for increase in insolation level (c) for decrease in insolation level. 55
3.22 Convergence response of CSB MPPT technique using ASS with resistive load. (a) start-up at $G = 800\ W/m^2$ (b) for increase in insolation level (c) for decrease in insolation level. 56

3.23 Two level operation at steady-state for G = 500 W/m^2 with CSB (ASS) MPPT Technique using $T_s = 1\ s$ 57
3.24 Convergence response of CSB (ASS) MPPT technique with battery load for start-up at $G = 800\ W/m^2$. 57
3.25 Convergence response of EAS IncCond MPPT technique with battery load for start-up at $G = 800\ W/m^2$. 58

4.1 Block diagram PV system with MPPT controller. 64
4.2 Characteristics waveforms of $P_{pv} - D$ and $V_L - D$. 66
4.3 Adaptive step-size MPPT algorithm flowchart. 68
4.4 Circuit model of developed PV system. 70
4.5 Inductor L_1 current waveform. 71
4.6 Inductor L_2 current waveform. 71
4.7 $V_L - D$ characteristic at different insolation level. 72
4.8 Duty-ratio waveform for LVB MPPT method using FSS and ASS for resistive load. 74
4.9 Converter output convergence responses with LVB MPPT method using FSS and ASS for resistive load (a) Load Voltage (V_L) (b) Load Current (I_L) (c) Load Power (P_L). 75
4.10 Converter input convergence responses with LVB MPPT method using FSS and ASS for resistive load (a) PV Voltage (V_{pv}) (b) PV Current (I_{pv}) (c) PV Power (P_{pv}). 76
4.11 Comparison of proposed LVB (ASS) MPPT method with P&O. and IncCond method. 77
4.12 Ropp profile of insolation-level. 78
4.13 PV power P_{pv} with LVB MPPT method using FSS and ASS. 79
4.14 Developed hardware setup of PV system for experimental validation. . . . 79
4.15 Load voltage (V_L) and load current (I_L) convergence responses with FSS method (a) start-up for G = 270 W/m^2 (b) for change in insolation from G = 270 W/m^2 to 500 W/m^2 (c) for change in insolation from G = 500 W/m^2 to 270 W/m^2. 82

...

4.16 Load voltage (V_L) and load current (I_L) convergence responses with ASS method (a) start-up for G = 270 W/m^2 (b) for change in insolation from G = 270 W/m^2 to 500 W/m^2 (c) for change in insolation from G = 500 W/m^2 to 270 W/m^2. 83
4.17 PV voltage (V_{pv}) and PV current (I_{pv}) convergence responses with FSS method (a) start-up for G = 270 W/m^2 (b) for change in insolation from G = 270 W/m^2 to 500 W/m^2 (c) for change in insolation from G = 500 W/m^2 to 270 W/m^2. 84
4.18 PV voltage (V_{pv}) and PV current (I_{pv}) convergence responses with ASS method (a) start-up for G = 270 W/m^2 (b) for change in insolation from G = 270 W/m^2 to 500 W/m^2 (c) for change in insolation from G = 500 W/m^2 to 270 W/m^2. 85
4.19 Convergence response of PV voltage (V_{pv}) and PV current (I_{pv}) using fixed step-size at G = 270 W/m^2 for P&O algorithm. 86
4.20 Convergence response of PV voltage (V_{pv}) and PV current (I_{pv}) using fixed step-size at G = 270 W/m^2 for IncCond algorithm. 86

List of Tables

2.1 Comparison of MPPT techniques 20

3.1 SEPIC converter design consideration. 40
3.2 Comparison of CSB (ASS) MPPT with enhanced auto scaling IncCond MPPT technique. 52
3.3 Comparison of experimental results of CSB MPPT technique using fixed and adaptive step-size with resistive load. 59
3.4 Comparison of experimental results of CSB MPPT technique using adaptive step-size and EAS IncCond with battery load. 59
3.5 Comparison of simulation and experimental results of CSB MPPT technique using adaptive step-size with resistive load. 59

4.1 Design parameters of SEPIC Converter 73
4.2 Comparison of simulation results of MPPT techniques 77
4.3 Comparison of experimental results of MPPT techniques 81
