

**DEPARTMENT OF CHEMICAL ENGINEERING  
INDIAN INSTITUTE OF TECHNOLOGY  
(BANARAS HINDU UNIVERSITY)  
VARANASI - 221005**

---

## **CERTIFICATE**

It is certified that the work contained in the thesis titled “**A study on bioremediation of azo dyes in microbial fuel cell and its feasibility for simultaneous electricity generation**” by **Ms. Amrita Shahi** has been carried out under my supervision and that this work has not been submitted elsewhere for a degree.

It is further certified that the student has fulfilled all the requirements of Comprehensive Examination, Candidacy and SOTA for the award of Ph.D. Degree.

**Prof. R.S. Singh**  
(Supervisor)

**Department of Chemical Engineering & Technology**  
(Banaras Hindu University)  
Varanasi-221005

## **DECLARATION BY THE CANDIDATE**

I, Amrita Shahi, certify that the work embodied in this thesis is my own bonafide work and carried out by me under the supervision of Prof. R.S. Singh from July 2014 to March 2021, at the Department of Chemical Engineering & Technology, Indian Institute of Technology (Banaras Hindu University), Varanasi. The matter embodied in this thesis has not been submitted for the award of any other degree/diploma. I declare that I have faithfully acknowledged and given credits to the research workers wherever their works have been cited in my work in this thesis. I further declare that I have not willfully copied any other's work, paragraphs, text, data, results, etc., reported in journals, books, magazines, reports, dissertations, thesis, etc., or available at websites and have not included them in this thesis and have not cited as my own work.

Date:

Place: Varanasi

(Ms. AMRITA SHAHI)

## **CERTIFICATE BY THE SUPERVISOR**

It is certified that the above statement made by the student is correct to the best of our knowledge.

**Prof. R.S. Singh**  
(Supervisor)  
Department of Chemical Eng. & Tech.  
Indian Institute of Technology  
(Banaras Hindu University)  
Varanasi

**Prof. Vijay Laxmi Yadav**  
(Head)  
Department of Chemical Eng. & Tech.  
Indian Institute of Technology  
(Banaras Hindu University)  
Varanasi

# **COPYRIGHT TRANSFER CERTIFICATE**

**Title of the Thesis:** A study on bioremediation of azo dyes in microbial fuel cell and its feasibility for simultaneous electricity generation

Name of the Student: **Ms. Amrita Shahi**

## **Copyright Transfer**

The undersigned hereby assigns to the Indian Institute of Technology (Banaras Hindu University) Varanasi all rights under copyright that may exist in and for the above thesis submitted for the award of the Doctor of Philosophy degree.

**Date:**

**Place:** Varanasi

(Ms. AMRITA SHAHI)

**Note:** However, the author may reproduce or authorize others to reproduce material extracted verbatim from the thesis or derivative of the thesis for author's personal use provided that the source and the Institute's copyright notice are indicated.

A decorative border with a repeating floral pattern in black and white surrounds the entire page. The background is a light green color. In the center, there are three overlapping orange rectangular boxes with white borders. The text is centered within the largest, front-most box.

**DEDICATED  
TO  
MY BELOVED FATHER**

## ***ACKNOWLEDGEMENTS***

*Though words are seldom sufficient to express gratitude and feeling, it somehow gives me an opportunity to acknowledge those who helped me during the course of my study.*

*I wish to express my deep sense of appreciation and everlasting indebtedness to my supervisor, **Prof. Ram Sharan Singh**, Department of Chemical Engineering & Technology, IIT (BHU), for his meticulous guidance and wholehearted cooperation in carrying out this work. His inspiring comments and suggestions motivated me to continue my research work. From his remarkable support and advice during my Ph.D. studies, I gained a lot of experience and knowledge which will help me in the future.*

*I would like to thank **Prof. Vijay Laxmi Yadav (Head)**, Department of Chemical Engineering & Technology, IIT (BHU), for encouraging me and providing me all the facilities to carry out my research work.*

*It is a great pleasure to acknowledge my deepest thanks and gratitude to **Prof. B. N. Rai**, Department of Chemical Engineering & Technology, IIT (BHU), for their immense guidance and valuable suggestions during my research work.*

*I would also like to express my sincere thanks to my RPEC membrane, **Dr. Bhavana Verma**, Department of Chemical Engineering & Technology IIT (BHU), and **Prof. Y. C. Sharma**, Department of Chemistry, IIT (BHU), for their stimulating help and criticism which incited me to widen my research from various perspectives. I would like to express my sincere thanks to **Prof. A. S. K. Sinha** and*

**Prof. P. K. Mishra**, Ex- Head , Department of Chemical Engineering & Technology, IIT (BHU), for their guidance and support during my research work.

I would like to express my sincere thanks, **Prof. H. L. Pramanik, Prof. M. K. Mondal, Dr. Ravi Jaiswal**, and **Dr. Ankur Verma** , Department of Chemical Engineering & Technology, IIT (BHU), for their valuable suggestion during my thesis writing. I wish to express deep regards to all the teachers of the Chemical Engineering Department for their kind support at all moment during the progress of my research.

I want to express my sincere thanks to **Dr. V. C. Padmanaban**, Department of Biotechnology, Kamaraj College of Engineering & Technology, Madurai, Tamilnadu, for their sincere help and guidance during my research work.

I express my sincere thanks to, **Dr. Balendu Shekher Giri** and **Dr. Arpana Yadav** for their constant support and motivation throughout the work. I am extremely thankful to my dear friends, **Dr. Nirupama Patra, Dr. Suverna Trivedi, Dr. Vineeta Gautam, Ms. Poornima Pandey, Dr. Mithilesh Rai, Dr. Munaa Kumar, Mr. Tarun Dixit, Dr. Ravi Sonwani, Mr. Yogesh Vishwakarma**, and many more, for their co-operation, motivation, and sincere help during my research. I am grateful to **Mr. Sudhir Kumar, Mr. Ajeet Yadav, Mr. Ajay Yadav**, and **Mr. Rakesh Kumar Chaudhary** for the assistance extended by them from time to time during the research work. I am also grateful to all office staff of the department and authorities of IIT (BHU), for their kind help to complete the thesis work.

*Finally, I am extremely grateful to my in-law's family members, especially to my father-in-law **Mr. Ganesh Prasad**, and my mother-in-law **Ms. Kamla Devi, Dr. Govind Malik** and **Dr. Mukesh Vishwakarma** for their continuous support and encouragement. **My father Dr. Jai Prakash Shahi** and **my mother Ms. Prabhawati Shahi**, have been a guiding force throughout my life. Without their love and encouragement, this dissertation wouldn't have happened. I would like to thank my elder brother **Dr. Alok Kumar Shahi** and **Mr. Prabhas Kumar Shahi** and my younger brother, **Mr. Himanshu Singh**, their encouragement strengthened my faith and confidence. They were always keen to know what I was doing and how I was proceeding. In particular, I would like to thank my Husband, **Mr. Arun Kumar**, for his tremendous love, companionship, encouragement, and support over these years for completing my thesis.*

*Finally, I bow with reverence and gratitude to thank the Almighty who has enriched me with such an excellent opportunity and infused the power in my mind to fulfill the work assigned to me.*

**(AMRITA SHAHI)**

## List of Symbols and Abbreviations

### List of Symbols

$M_{O_2}$	Molar Mass of Oxygen (gm/mol),
V	Volume of Anode Chamber (L)
F	F is the Faraday constant (96485 C/mole)
I	I is the current (A),
$\Delta$ COD	Changed in COD over time t (gm/L)
$\mu$	Specific Growth Rate (1/day),
$\mu_{max}$	Maximum Specific Growth Rate (1/day)
$K_s$	Half-Saturation Constant (mg/L).
$K_i$	Substrate Inhibition Constant (mg/L).
S	Substrate Concentration (mg/L)

## List of Abbreviations

MFC	Microbial Fuel Cell
PEM	Proton Exchange Membrane
MSM	Mineral Salt medium
COD	Chemical Oxygen Demand
TCA	Tricarboxylic Acid Cycle
HRT	Hydraulic Retention Time
LDH	Layered Double Hydroxide
TBP	Tributyl phosphate
ORP	oxidation-reduction potential
UV-Vis	Ultraviolet-Visible
FTIR	Fourier-transform infrared spectroscopy
LCMS	Liquid chromatography and mass spectroscopy
LC-ESI	liquid chromatography-electrospray ionization
FESEM	Field Emission Scanning Electron Microscopy
SAIF	Sophisticated Analytical Instrumentation Facility
CDRI	Central Drug Research Institute
DET	Direct electron transfer
MET	Mediated electron transfer
RO16	Reactive Orange 16
RR120	Reactive Red 120
rDNA	Ribosomal DNA
NCBI-	National Center for Biotechnology - Basic Local Alignment Search Tool
CFU	Colony Forming Unit
CE	Coulombic efficiency
EC	Elimination Capacity
RSM	Response surface methodology

DX	Design Expert
CCD	Central composite design
FCC	Face Centered Central
ANOVA	Analysis of Variance
LO	Light Orange
DO	Dark Orange
PW	Pure White
LP	Light Pink
DP	Dark Pink
PW	Peach White
LY	Light Yellow
WO	White Orange
WY	White-Yellow
WP	White Pink
WW1	White White 1
WW2	White White 2
WW3	White White 3

# Preface

Extensive use of Azo dyes by various industries and discharge of colored wastewater directly to the aquatic system leads to deterioration of our environment. Toxicity and aesthetic effects of these dye wastewater make them necessary to be treated before discharge. There are many efficient physical and chemical technologies for the treatment of dye-containing wastewater, but they have the disadvantage of high operating costs and secondary waste generation. Nowadays, biological methods seek attention for the treatment of dyes due to their low cost, eco-friendly nature and versatility, and their capability to degrade a variety of dyes to partially or wholly to a stable and non-toxic compound. Generally, dyes degraded easily in an anaerobic environment but they lead to the formation of aromatic amines. Therefore, further treatment is recommended for complete mineralization of amines into non-toxic compounds. Several combinations of anaerobic and aerobic biological treatments have been suggested for enhanced dye degradation. Most of the Azo dyes are degraded under anaerobic conditions. Developments of the toxic intermediates during anaerobic degradation and lower decolorization are some of the operational limitations of biological methods. Hence the study is being diverted in search of new technology that increases the overall biological process efficiency. Microbial Fuel Cell (MFC) is a new emerging green and non-combustion based degradation technology that utilizes the potential of microbes for the degradation of waste along with the production of electricity. It has the dual advantage of producing electricity, and simultaneously it degraded waste. It has proven its utility for treating many industrial wastes such as food industry waste, pharmaceuticals waste, paint industry waste, and sewage wastewater along with electricity production. The MFC technology has already been well established for electricity production, but it has the only disadvantage of low power output,

which limits its large scale use commercialization. If this MFC technology is combined with the bioremediation of dyes, then the overall performance of MFC can be increased. A very small amount of work in the area of dye degradation with electricity production has been reported to date. Therefore taking all these research gaps, the present work was planned which emphasizes decolorization and degradation of two different Azo dyes, namely Reactive Orange 16 and Reactive Red 120, using mixed and isolated strain. Then the degradation of both the dyes is optimized using response surface methodology (RSM) combined with central composite design (CCD). The bacterial kinetic study was also carried out for inhibition study in MFC. Before this study, a preliminary setup (MFC1 and MFC2) was constructed, and sewage wastewater from a primary clarifier fed with glucose as a carbon source was used. From the literature review, Nafion and agar salt bridge were taken as proton exchange membrane (PEM), and the most suitable membrane was chosen for further studies. It was concluded from different preliminary experiments that Nafion as PEM and carbon cloth as a current collector would be suitable for dye degradation and electricity generation. Experimental results are analyzed, discussed, and compared against results from similar investigations and correlations. An extensive literature survey has been conducted before all experimental studies.

## **Thesis Overview**

**Chapter 1** of the thesis contains the general introduction of dyes, their use, toxic effects, different treatment technologies, and treatment of these dyes using MFCs along with the production of electricity. Problem statements and the significance of researches have also been discussed here.

**Chapter 2** represents detailed reviews of relevant literature related to synthetic dyes, classification, potential threats to the environment, and current treatment technologies. It also contains a review on MFC, its working principle and metabolism, recent researches, and parameters affecting its performance. It also highlights the significant research gap for the treatment of dyes and in MFC technologies. Research objectives of the present studies have also been discussed here.

**Chapter 3** describes the details of materials and methods involved in the present study, which includes sampling, enrichment, and acclimatization, isolation and identification of dye degrading bacterial strain, optimization of process parameters in MFC for dye degradation. Also, different analytical techniques used for the analysis of the performance of MFC have been discussed in detail.

The result and discussion part are divided into five chapters (4,5,6,7,8). In **Chapter 4**, isolation and identification of bacterial strain for dye degradation have been carried out for finding out potent dye degrading bacterial strain. **Chapter 5** contains a comparative study of two MFCs with different proton exchange membranes. The **Chapter 6** describes the behavior of MFC for Azo dye degradation using mixed culture and their microbial kinetics study. The **Chapter 7** contains process optimization using RSM for dye degradation using a single strain in MFC. The **Chapter 8** of this thesis describes the comparative study of mixed and isolated strain in MFC for enhanced dye degradation and its process optimization.

An effort has been made to conclude the thesis in **chapter 9**. In the concluding chapter, valuable experiences gained as a result of the work done for this thesis are discussed. From

the lessons learned, recommendations are made to carry forward the present work more efficiently and systematically. References used in this thesis have been compiled at the end of the thesis. Three papers from the work have already been published in the referred journals and one paper has been communicated for the publication and is under review.
