

# List of Tables

|      |   |     |
|------|---|-----|
| 1.1  | Model Parameter for ARIMA . . . . .   | 9   |
| 2.1  | Literature Review(Software Bug Prediction) . . . . .  | 18  |
| 2.2  | Literature Review (Clone Evolution Prediction) . . . . .  | 52  |
| 2.3  | Literature Review(Software Reliability Prediction) . . . . .  | 61  |
| 3.1  | Statistical T- Test Report (Comparison among Transfer Functions) . . . . .  | 89  |
| 3.2  | Statistical T- Test Report (Comparison among Number of Hidden Layers)   | 89  |
| 3.3  | Comparison among Number of Input Layers . . . . .   | 90  |
| 3.4  | Cluster range for Debian Bug Number Series . . . . .  | 91  |
| 3.5  | Statistical Comparison . . . . .  | 91  |
| 3.6  | Error Values (ARIMA) . . . . .  | 97  |
| 3.7  | Error Values (Neural Network Model) . . . . .   | 98  |
| 3.8  | Error Values (ARIMA + ANN) . . . . .  | 99  |
| 3.9  | Error Values (ARIMA Model) . . . . .  | 103 |
| 3.10 | Error Values (ANN Model) . . . . .  | 103 |
| 3.11 | Error Values (Ensemble Model) . . . . .   | 104 |
| 3.12 | Table Showing Threshold Values of Different States . . . . .  | 113 |
| 3.13 | Transition Probability for 1st order Markov Model (Training Period: 2000 - 2012)[ X: Transition Absent] . . . . .     | 116 |
| 3.14 | Transition Probability for 2nd order Markov Model (Training Period: 2000 - 2012)[ X: Transition Absent] . . . . .     | 117 |
| 3.15 | Most Probable Next State value 1st order Markov Model (Training Period: 2010 - 2012)[ X: Transition Absent] . . . . . | 117 |
| 3.16 | Most Probable Next State value 2nd order Markov Model (Training Period: 2010 - 2012)[ X: Transition Absent] . . . . . | 118 |
| 3.17 | Table Showing Training set, Test set and Accuracy Information(1st Order Markov Chain) . . . . .                       | 120 |
| 3.18 | Prediction Result(1st order Markov Model) . . . . .   | 121 |
| 3.19 | Table Showing Training set, Test set and Accuracy Information(2nd Order Markov Chain) . . . . .                       | 121 |
| 3.20 | Prediction Result(2nd order Markov Model) . . . . .   | 122 |

|      |   |     |
|------|---|-----|
| 3.21 | Table Showing Training set, Test set and Accuracy Information for different prediction window.A: 1st Order Markov Chain B: 2nd Order Markov Chain . . . . . | 122 |
| 3.22 | State Information for Hybrid Model . . . . .  | 127 |
| 3.23 | State Information HMM-1 [O: Observation Sequence, S: State Sequence, ConI: Increasing Contributor, ConD: Decreasing Contributor] . . . . .                  | 132 |
| 3.24 | State Information HMM-2 [O: Observation Sequence, S: State Sequence, ComI: Increasing Commits, ComD:Decreasing Commits] . . . . .                           | 133 |
| 3.25 | State Information HMM-2 [O: Observation Sequence, S: State Sequence, (HIGH, LOW, MID1, MID2): Hybrid States] . . . . .                                      | 134 |
| 3.26 | Log(Probability) Values for Observation Sequence . . . . .  | 135 |
| 3.27 | ARIMA model and RMSE Value . . . . .  | 148 |
| 3.28 | Hybrid model and RMSE Value . . . . .   | 149 |
| 3.29 | Software Metrics used for Software Clone Evolution Prediction . . . . .   | 152 |
| 3.30 | Evaluation of Training Data (Model 1: Linear Regression) . . . . .  | 160 |
| 3.31 | Evaluation for Test Data (Model 1: Linear Regression) . . . . .   | 160 |
| 3.32 | Evaluation of Test Data (Model 3: Linear Regression) . . . . .  | 161 |
| 3.33 | Evaluation for Test Data (Model 3: Multilayer Perceptron) . . . . .   | 161 |
| 3.34 | Parameters Description . . . . .  | 171 |
| 3.35 | Value of Parameter(ARIMA Model) . . . . .   | 171 |
| 3.36 | Value of Parameter(NN (Back Propagation)) . . . . .   | 172 |
| 3.37 | Value of Parameter(MOGA-NN) . . . . .   | 173 |
| 3.38 | ARIMA Result[NRMSE] . . . . .   | 181 |
| 3.39 | NN- BackPropagation Result[NRMSE] . . . . .   | 181 |
| 3.40 | NN- MOGA Result[NRMSE] . . . . .  | 181 |
| 3.41 | Comparison of Different Models . . . . .  | 182 |
| 3.42 | Dataset Details . . . . .   | 187 |
| 3.43 | RMSE (ARIMA and Hybrid Model) . . . . .   | 192 |
| 3.44 | MAE (ARIMA and Hybrid Model) . . . . .  | 192 |
| 3.45 | Parameters Description . . . . .  | 207 |
| 3.46 | Value of Parameters MOGA-NN . . . . .   | 207 |
| 3.47 | Value of Parameters for ELM +KNN . . . . .  | 209 |
| 3.48 | Four Best Solutions and Their PICP and NMPIW Values Obtained by MOGA-NN and ELM +KNN Model: System 5 . . . . .  | 210 |
| 3.49 | Four Best Solutions and Their PICP and NMPIW Values Obtained by MOGA-NN and ELM +KNN Model: System 40 . . . . .   | 211 |
| 3.50 | Four Best Solutions and their PICP and NMPIW Values Obtained by MOGA-NN and ELM +KNN Model: System SS3 . . . . .  | 211 |
| 3.51 | External Validity Testing (PICP, NMPIW) . . . . .   | 220 |
| 52   | Dataset Used in The Thesis . . . . .  | 227 |
