DESCRIPTION	PAGE NO
Abbreviations	xiii-xiv
List of Figures	xv-xix
List of Table	xx-xxi
Preface	xxii-xxvi
CHAPTER-1	1-26
1.1 Introduction.....	1
1.2 Adsorption process.....	4
1.3 Overview of adsorption isotherm models.....	6
1.3.1 Langmuir isotherm model.....	7
1.3.2 Freundlich isotherm model.....	7
1.4 Heterogeneous catalysis.....	8
1.4.1 Langmuir-Hinshelwood Mechanism.....	9
1.4.2 Eley-Rideal Mechanism.....	10
1.5 Heterogeneously catalyzed Fenton reaction.....	10
1.6 Heterogeneous photo-Fenton process.....	13
1.7 Literature review and Research Gap.....	15
1.7.1 Computational approaches to adsorption studies.....	16
1.7.2 Fenton and Photo-Fenton catalytic properties of magnetite and its composites.....	20
1.7.3 Heterogeneous Photo-Fenton reaction.....	23
1.8 Objectives of the thesis.....	25

CHAPTER-2 **27-40**

2.1 Introduction.....27

2.2 Experimental part.....27

 2.2.1 Materials characterization techniques with instrumentation details27

 2.2.1.1 Powder X-Ray Diffraction (XRD).....27

 2.2.1.2 Fourier Transform Infrared Spectroscopy (FTIR)28

 2.2.1.3 Transmission Electron Microscopy (TEM)29

 2.2.1.4 Scanning Electron Microscopy (SEM)30

 2.2.1.5 UV-Visible spectroscopy31

 2.2.1.6 UV-Vis diffuse reflectance spectroscopy (UV-DRS).....32

 2.2.2 Procedures followed for Fenton and photo-Fenton catalytic activities.....33

2.3 Computational part.....34

 2.3.1 Molecular Dynamics Simulations.....34

 2.3.1.1 Ensemble.....36

 2.3.1.2 Force Field36

 2.3.1.3 Water Models.....37

 2.3.1.4 Software used in Molecular Dynamics simulations.....38

 2.3.2 Quantum Mechanical calculations.....38

 2.3.2.1 Basis set40

 2.3.2.2 Functional40

 2.3.2.3 Software used in Quantum Mechanical calculations40

CHAPTER-3 **41-54**

3.1 Introduction.....41

3.2. Methodology42

 3.2.1 Simulation models.....42

 3.2.2 Simulation method.....43

3.3 Results and Discussion45

 3.3.1 Density Profile.....45

 3.3.2 Adsorption Isotherms.....46

 3.3.3 Radial Distribution Function (RDF) analysis.....50

3.3.4 Discussion on the adsorption mechanism.....	53
3.4. Conclusions.....	54

CHAPTER-4 **55-74**

4.1 Introduction.....	55
4.2 Methodology.....	58
4.2.1 Simulation Models.....	58
4.2.2 Simulation Method.....	59
4.2.3 Experimental methodology.....	61
4.2.4 Catalytic degradation of <i>p</i> -nitrophenol.....	61
4.3 Results and Discussion	;62
4.3.1 Experimental results.....	62
4.3.2 MD results.....	65
4.3.3 The heterogeneous Fenton mechanism.....	72
4.4. Conclusions.....	73

CHAPTER-5 **75-96**

5.1 Introduction.....	75
5.2 Experimental Methodology	78
5.2.1 Synthesis of G1 and G2 photocatalysts.....	78
5.2.2 Catalytic photo-Fenton experiment.....	79
5.3 Computational Methodology	79
5.3.1 DFT details.....	79
5.3.2 Classical Molecular Dynamics Simulations.....	80
5.4 Results and Discussion	81
5.4.1 Characterization.....	81
5.4.2 Photo-Fenton experiment analysis.....	85
5.4.3 Recyclability test.....	88
5.4.4 Computational analysis.....	89
5.4.5 Mechanism.....	94
5.5 Conclusions.....	96

CHAPTER-6	97-120
6.1 Introduction.....	97
6.2 Experimental.....	99
6.2.1 Synthesis of Graphene Oxide (GO).....	99
6.2.2 Synthesis of Magnetite-Graphene oxide (MGO) composite.....	99
6.2.3 Catalytic Fenton and photo-Fenton experiment.....	100
6.3 Computational Methodology	100
6.3.1 DFT details.....	100
6.3.2 Classical Molecular Dynamics Simulations.....	101
6.4 Results and Discussion	105
6.4.1 Characterization.....	105
6.4.2 Photo-Fenton experiment analysis.....	108
6.4.3 Recyclability test.....	111
6.4.4 Computational analysis.....	112
6.4.4.1 Natural Bonding Orbital (NBO) Analysis.....	113
6.4.4.2 TD-DFT calculations.....	114
6.4.4.3 HOMO-LUMO orbital analysis in DFT and TD-DFT calculations.....	115
6.4.4.4 MD results.....	117
6.4.5 Mechanism.....	119
6.5 Conclusions.....	120
 CHAPTER-7	 121-123
7.1 Summary.....	121
7.2 Future scope of this work.....	123
