Acknowledgement.....	ix
List of figures.....	xv
List of tables.....	xix
List of abbreviations.....	xxi
Preface.....	xxiii

Table of Contents

1. Introduction.....	3
1.1 Composition of WEEE.....	3
1.2 Promoting factors for e-waste generation	4
1.3 Importance of WEEE	5
1.4 Valuable and hazardous contents of WEEE.....	6
1.5 Indian e-waste generation scenario	7
1.6 Consequences of improper handling of WEEE.....	9
1.7 WEEE Recycling Statistics	12
1.8 Structure of PCBs and its composition	13
1.9 Conventional recycling techniques	15
1.9.1 Preprocessing	15
1.9.2 Mechanical processing.....	17
1.9.3 End recycling	24
1.10 Modern approach to the recycling of WPCBs	41
1.11 Objectives and scope of the present work	45
2. Experimental Details.....	51
2.1 Materials procurement and WPCB's pre-processing	51
2.2 Estimation of composition of WPCBs	53
2.3 Estimation of decomposition temperature of WPCBs	54
2.4 Downsizing of WPCBs by Hammer milling.....	56
2.5 Dissolution of HER of WPCBs in organic solvent(s).....	59
2.6 Analysis of dissolved HER in organic solvent(s).....	61
2.7 Recovery of spent solvent and its analysis.....	63
2.8 Analysis of recovered residue	64

2.9	Mechanism of interaction of solvent with WPCBs	65
2.10	Comparative study on leachability of copper form solvent treated and hammer milled treated WPCBs	65
2.11	Recovery of solder material during the pre-processing of WPCBs.....	67
3.	Results and Discussion.....	70
3.1	Hammer milling of WPCBs and optimization of parameters.....	73
3.1.1	Effect of time on milling of WPCBs	73
3.1.2	Effect of feed rate on the milling of WPCBs.....	74
3.1.3	Sieve analysis of milled WPCBs	75
3.1.4	Distribution of copper in different size fraction	76
3.1.5	Microscopic examination of milled WPCBs	77
	Conclusions	80
3.2	Delamination of WPCBs by dissolution of HER in DMF.....	85
3.2.1	Effect of temperature on HER dissolution in DMF.....	85
3.2.2	Effect of WPCBs:DMF ratio on HER dissolution in DMF	86
3.2.3	Effect of WPCBs size on HER dissolution in DMF	88
3.2.4	Effect of time on HER dissolution in DMF.....	90
3.2.5	Recovery of spent DMF by regeneration	92
3.2.6	HER dissolution efficiency of regenerated DMF	95
3.2.7	Analysis of recovered residue obtained after regeneration	95
3.2.8	Chemical Interaction	98
	Conclusions	101
3.3	Liberation of WPCB's metal-laminates by HER dissolution using DMA	105
3.3.1	Effect of HER dissolution at different temperatures	105
3.3.2	HER dissolution at varying WPCB:DMA ratios.....	106
3.3.3	Liberation of metal laminates of WPCBs of varying size	108
3.3.4	Investigation regarding recycling of spent DMA	110
3.3.5	HER dissolution efficiency of recycled DMA and its cyclic loss	115
3.3.6	Analysis of obtained residue after recycling of DMA.....	116
3.3.7	Possible interaction between HER and DMA	119
	Conclusions	122
3.4	Comparative study of HER dissolution in DMA vs. DMF and its mechanism.....	125
3.4.1	Dissolution of HER in DMA vs. DMF	125
3.4.2	Mechanism of dissolution of HER in DMA.....	131
	Conclusions	138
3.5	Delamination of large size WPCBs and post-treatment leaching of copper	141

3.5.1	Utility of DMA for delamination of large size WPCBs.....	141
3.5.2	Effect of organic solvent treatment on leachability of copper	145
	Conclusions.....	154
4.	Major conclusions of the present research work.....	157
4.1	Suggestions for future work.....	160
	References.....	162
	Appendices.....	179
	Appendix-A (Identification of peaks of NMR Spectra).....	179
	List of Publications	183
