	<b>List of Figures</b>	<b>vii-xi</b>
	<b>List of Tables</b>	<b>xii</b>
	<b>List of Abbreviations</b>	<b>xiii</b>
	<b>Preface</b>	<b>xiv-xv</b>
<b>Chapter 1</b>	<b>INTRODUCTION AND LITERATURE REVIEW</b>	<b>01-13</b>
	1.1 General	1
	1.2 Problem statement	2
	1.3 Application of Biopolymer in Geotechnical Engineering	5
	1.4 Literature review	6
	1.4.1 Soil consistency	6
	1.4.2 Soil Strengthening	7
	1.4.2.1 Unconfined compressive strength	7
	1.4.2.2 Shear strength	8
	1.4.3 Soil erosion control	9
	1.4.4 Ground injection	10
	1.4.5 Pavement and earth stabilization	11
	1.4.6 Ground water control	11
	1.4.7 Soil water retention	12
	1.5 Scope and objective	13

<b>Chapter 2</b>	<b>MATERIALS AND METHODOLOGY</b>	<b>14-33</b>
2.1	Materials	14
2.1.1	Bauxite residue	14
2.1.2	Coal mine overburden waste (CMO)	16
2.1.3	Biopolymer	17
2.1.3.1	Xanthan gum	18
2.1.3.2	Guar gum	18
2.2	Testing methodology	20
2.3	Detailed description of Testing Methodologies	21
2.3.1	Specific gravity	21
2.3.2	Grain size distribution	23
2.3.2.1	Sieve analysis	23
2.3.2.2	Hydrometer analysis	24
2.3.3	Consistency limit	24
2.3.3.1	Liquid limit	24
2.3.3.2	Plastic limit	25
2.3.4	Compaction	26
2.3.5	Permeability test	26
2.3.6	Strength study	27
2.3.6.1	Triaxial compressive test	27
2.3.6.2	Unconfined compressive strength	28
2.3.6.3	Sample preparation for the strength test	28
2.3.7	Durability test	29
2.3.7.1	Freezing and thawing (F-T)	29
2.3.8	Mineralogical and morphological analysis	31
2.3.8.1	X-Ray diffraction	31
2.3.8.2	Scanning Electron Microscopy (SEM)	33
<b>Chapter 3</b>	<b>RESULTS AND DISCUSSION</b>	<b>34-97</b>
3.1	Compaction test	34

3.1.1 Effect of Biopolymer Stabilization on the Compaction	35
Parameters of bauxite residue	
3.2 Strength study	42
3.2.1 Effect of the biopolymer stabilization on Bauxite residue	43
3.2.1.1 Triaxial compressive test	43
3.2.1.2 Effect of biopolymer, biopolymer concentration and curing time on the UCS and stress-strain behavior	50
3.2.2 Effect of the biopolymer stabilization on Coal mine overburden waste	56
3.2.2.1 Triaxial compressive test	56
3.2.2.2 Effect of biopolymer on unconfined compressive strength (UCS) of CMO waste	63
3.3 Permeability test analysis	65
3.3.1 Influence of biopolymer on permeability of bauxite residue	66
3.3.2 Influence of biopolymer on permeability of Coal mine overburden waste	68
3.4 Total carbohydrate method (TCM)	70
3.4.1 Standard line for Biopolymer Solution	71
3.4.2 Colorimeter analysis on bauxite residue	73
3.4.3 Colorimeter analysis on Coal mine overburden waste	74
3.5 Durability Study (Freezing and thawing test)	75
3.5.1 Sample preparation using Thermo-gelation	76
3.5.2 Sample preparation without Thermal treatment	77
3.5.3 Effect of Thermo-gelation on Compressive Strength before F-T process	77
3.5.4 Effect of biopolymer on freezing and thawing resistance	80
3.5.5 Behavior of stabilized bauxite residue samples Post F-T cycles	87

3.6 Mineralogical and Morphological Study	92
3.6.1 Mineralogical study (X-Ray diffraction)	92
3.6.2 Morphological study (Scanning Electron Microscopy)	97
<b>Chapter 4 APPLICATIONS OF BIOPOLYMERS IN CIVIL ENGINEERING</b>	<b>98-106</b>
4.1 Application in civil engineering	99
4.1.1 Flexibility of Biopolymer Stabilization for Road Shoulder Construction	99
4.1.2 Increasing soil bearing capacity for shallow foundation	100
4.1.3 Slope surface stabilization	101
4.1.4 Earth stabilization using biopolymer	103
4.2 Economic Feasibility of Biopolymer for Soil/Waste Treatment	104
<b>Chapter 5 CONCLUSIONS AND FUTURE SCOPE</b>	<b>107-109</b>
5.1 Conclusions	107
5.2 Scope of future work	109
