

TABLE OF CONTENTS

<u>CONTENTS</u>	<u>PAGE NO.</u>
List of Symbols	i-ii
List of Figures	iii-vi
List of Tables	vii-viii
Preface	ix-xi
Chapter 1	1-18
Introduction	
1.1 Introduction to Daptomycin	2
1.2 The Challenge of Methicillin Resistant microorganisms	3
1.3 Discovery of Daptomycin	6
1.4 Development of Daptomycin	8-13
1.4.1 The multi-domain organization of Non-ribosomal peptide synthetases (NRPS)	8
1.4.1.1 N-Terminal Acylation	
1.4.1.2 Biosynthesis of Non-proteinogenic amino acids	
1.4.1.3 Peptide formation and release	
1.4.2 Combinatorial approach for biosynthesis	13
1.5 Mode of action of Daptomycin	13
1.6 Clinical Significance of Daptomycin-Case Studies	15-18
1.6.1 Deep sternal wound infections post cardiac operation	15
1.6.2 Diabetic foot ulcers and infections	16
1.6.3 Combination drugs containing Daptomycin for Vancomycin-Resistant <i>Enterococcus faecium</i>	16
1.6.4 Daptomycin for osteomyelitis caused by MRSA in a renal transplant recipient with Fabry Anderson Disease	17
1.6.5 Brain damage and hearing loss in infant rat pneumococcal Meningitis	17
1.6.6 Immunomodulatory Effects of Daptomycin	18
1.6.7 Prosthetic joint infection by <i>Enterococcus faecalis</i>	18

Chapter 2		19-47
Literature Review		
2.1	History of Daptomycin and Related work	19
2.2	Research gaps and perspectives	40
2.3	Objectives	47
Chapter 3		48-78
Materials and Methods		
3.1	Materials	48
3.1.1	Chemicals	48
3.1.2	Microorganisms	48
3.1.3	Media	49-50
	3.1.3.1 Media and culture conditions for <i>Streptomyces roseosporus</i>	
	3.1.3.2 Media and culture conditions for <i>Aspergillus niger</i>	
	3.1.3.3 Media and culture conditions for <i>Staphylococcus aureus</i>	
3.2	Analytical method for Daptomycin	50
3.2.1	Determination of Daptomycin by HPLC	50
3.3	Optimization of process parameters enhanced Daptomycin production using OFAT (one-factor-at-a-time) method and Taguchi Method	54
3.3.1	Effect of various factors by OFAT method	54
3.3.2	Optimization by L16-Orthogonal Array Method	55
3.4	Rheological properties of the fermentation broth	57
3.4.1	Morphological changes of <i>S.roseosporus</i> during the course of fermentation	57
3.4.2	Evaluation of the rheology of Daptomycin fermentation broth	58
3.5	Fermentation Studies in Stirred tank fermenter	59

3.6	Continuous Production of Daptomycin in a Packed Bed Bioreactor using <i>Streptomyces roseosporus</i> by novel immobilization techniques	60
3.6.1	Concentrated seed culture	60
3.6.2	Whole cell immobilization modes	60
3.6.3	Calcium alginate bead formation	61
3.6.4	Immobilization in Natural Loofah sponges	61
3.6.5	Immobilization in Silk sachets	61
3.6.6	Packed Bed Bioreactor	62
3.6.7	Cell Growth and Product Estimation	63
3.6.8	Cell Leakage Estimation	64
3.6.9	SEM Analysis of Immobilized cells on matrices	64
3.7	Daptomycin production in an airlift bioreactor by morphologically modified and immobilized cells of <i>Streptomyces roseosporus</i>	65
3.7.1	Morphological variations of <i>S. roseosporus</i>	65
3.7.2	Immobilization of <i>S. roseosporus</i> on refractory brick flakes and silk sachets	65
3.7.3	Cell growth and product estimation	67
3.7.4	Cell leakage estimation	68
3.7.5	Evaluation of the rheology and hydrodynamics of fermentation broth	68
3.7.6	Reusability of immobilized and pelletized cells	68
3.7.7	Microscopic analysis of the pelletized and the immobilized cells	69
3.8	Bubble Characteristics and Mass Transfer in an Airlift Bioreactor	69
3.8.1	Gas holdup	70
3.8.2	Volumetric mass transfer coefficient	71

3.9	Synergistic Oligo-dynamic Effect of Daptomycin with Mycogenic Gold, Silver and Bimetallic Nanoparticles against MRSA (Methicillin resistant <i>Staphylococcus aureus</i>)	71
3.9.1	Growth of Microorganism	72
3.9.2	Production of Monometallic and Bimetallic (silver and gold) Nanoparticles by Co-reduction	73
3.9.3	Characterizations	73
3.9.4	Gel formulation	74
3.9.5	Evaluation of Properties of Anti-MRSA Topical Gel	75
3.9.6	Antimicrobial Assay	77
Chapter 4		79-139
	Results and Discussion	
4.1	Optimization of process parameters for Daptomycin production by <i>Streptomyces roseosporus</i> using one-factor-at-a-time OFAT method	79
4.1.1	Effect of temperature	79
4.1.2	Effect of pH on Daptomycin production	80
4.1.3	Effect of inoculum age	82
4.1.4	Effect of inoculum volume	83
4.1.5	Effect of different carbon sources on Daptomycin production	84
4.1.6	Effect of different nitrogen sources on Daptomycin production	85
4.1.7	Effect of Precursor on Daptomycin production	86
4.2	Optimization by L16 - Orthogonal Array Method	89
4.3	Shake flask studies of Daptomycin production	92
4.4	Rheological Characterization of <i>Streptomyces roseosporus</i> for the Production of Daptomycin	95

4.4.1	Morphological changes of <i>S.roseosporus</i> during the course of fermentation	95
4.4.2	Rheological properties of the fermentation broth	96
4.5	Batch Culture Fermentation in a 3L Stirred Tank Fermenter	101
4.5.1	Production profile of Daptomycin	101
4.5.2	Aeration and agitation in stirred tank bioreactor	103
4.6	Continuous Production of Daptomycin in a Packed Bed Bioreactor using <i>Streptomyces roseosporus</i> by novel immobilization techniques	105
4.6.1	Effect of cells to carrier ratio	105
4.6.2	Effect of Dilution rate on Daptomycin production	108
4.6.3	SEM images of immobilization matrices	112
4.7	Daptomycin production in an airlift bioreactor by morphologically modified and immobilized cells of <i>Streptomyces roseosporus</i>	113
4.7.1	Preliminary screening of support matrices	113
4.7.2	Effect of nitrogen sources, inoculum size and aeration rate on pellet formation	113
4.7.3	Correlation of cell morphology and Daptomycin production	117
4.7.4	Reusability of cells pelletized and immobilized cells	118
4.7.5	Microscopic view of different cell morphology	119
4.7.6	Rheological characterization of the broth	120
4.7.7	Variation of volumetric oxygen transfer coefficient	120
4.7.8	Comparison of Daptomycin Production by free and immobilized cells of <i>S.roseosporus</i>	121
		122

4.8	Effect of Bubble Characteristics on Mass Transfer Coefficient in an Internal Loop Airlift Bioreactor for Microbial Production of Daptomycin	125
4.8.1	Bubble Characterization	125
4.8.2	Gas Holdup	126
4.8.3	Mass transfer	127
4.9	In-Vitro Assessment of the Synergistic Oligodynamic Potential of Daptomycin and Mycogenic Gold, Silver and Bimetallic Nanoparticles for Prevention of Skin Infections	131
4.9.1	Nanoparticle formation	131
4.9.2	UV-Vis Spectroscopy	132
4.9.3	X-Ray Diffraction	133
4.9.4	Transmission Electron Microscopy (TEM) Analysis	136
4.9.5	Antimicrobial assay	137
Chapter 5		140-146
Summary and Conclusions		
References		147-173
List of Publications		174
