List of Tables	xiii
List of Symbols	xv
List of Abbreviations	xvii
Abstract	xix
1 Introduction	1
1.1 Recommender System	1
1.2 Classification of the Recommender System	3
1.3 Recommendation Techniques	4
1.3.1 Collaborative Filtering (CF)	5
1.3.2 Content-based Recommendation System	6
1.3.3 Hybrid Recommendation	6
1.3.4 Demographic-based recommendation system	7
1.3.5 Knowledge-based recommendation system	8
1.4 Music Recommendation System	8
1.4.1 Limitations of Music Recommender System	10
1.5 Motivation	12
1.6 Research Goals	13
1.7 Contributions	15
1.7.1 Deep Content-based Music Recommendation System	15
1.7.2 Clus-DR: Cluster-based Diversity Recommendation System	16
1.7.3 Graph-based Diverse Recommendation System	17
1.8 Structure of the Thesis	19

2	Background	23
2.1	Literature Review in Accurate Music Recommendation	23
2.1.1	Collaborative Music Recommender System	24
2.1.2	Content-based Recommendation System	27
2.1.3	Hybrid Recommendation System	31
2.2	Literature Review in Diversification of Recommendation System	32
2.2.1	Diversity in Recommendation System: State-of-the art Model based on Machine Learning and Deep Learning	33
2.2.2	Diversity in Recommendation System: State of the art model based on GNN	35
2.3	Preliminaries	39
2.3.1	Similarity Measures	39
2.3.2	Musical Instrument Digital Interface (MIDI)	39
2.3.3	Graph Neural Network	40
2.3.4	Heterogeneous Graph Neural Network	41
2.4	Evaluation Metrics	42
3	MSA-SRec: Improved Self-Attentive MIDI Content-based Music Recommendation System	47
3.1	Introduction	47
3.2	Problem Formulation And the Proposed Algorithm	49
3.2.1	Data-Preprocessing	49
3.2.2	MIDICSV Conversion	50
3.2.3	Matrix Factorization	52
3.2.4	MIDI Based Self Attentive Sequential Music Recommendation (MSA-SRec)	53
3.2.5	Objective Function	58
3.3	Analysis and Results	59
3.3.1	Dataset	59
3.3.2	Experimental Settings	61
3.3.3	Recommendation Performance	62
3.3.4	Ablation Study	64
3.3.5	Statistical Significance Test	70
3.4	Summary	72

4	Diversification in Recommendation System: Cluster-based Machine learning approaches	73
4.1	Introduction	73
4.2	Problem Description	74
4.3	Proposed Methodology	75
4.3.1	Individual Diversity Score for User	77
4.3.2	Item Feature Score for User	77
4.3.3	Clustering Algorithm	79
4.3.4	Aggregate Cluster Diversity	81
4.3.5	Clus-DR Model	83
4.3.6	Clus-DR Model Training and Recommendation Generation . . .	86
4.4	Experiments	87
4.4.1	Dataset	88
4.4.2	Diversity Evaluation Metrics	89
4.4.3	Experimental Results and Baseline	91
4.4.4	Accuracy-Diversity Trade-off	98
4.5	Ablation Study	100
4.6	Statistical Significance Test	102
4.7	Summary	105
5	Diversification In Recommendation System: Graph Neural Network based Approaches	107
5.1	Introduction	107
5.2	Problem Formulation	109
5.2.1	Heterogeneous Information Network	109
5.2.2	Meta-path based embedding	110
5.2.3	Graph colouring	114
5.2.4	Problem Definition	115
5.3	Proposed Methodology	116
5.3.1	Graph colouring based diverse user selection	116
5.3.2	Meta-path based diverse embedding generation	117
5.3.3	Embedding Integration and Recommendation Generation	121
5.4	Experiments	124
5.4.1	Datasets and pre-processing	125
5.4.2	Div-HERec Structure	126
5.4.3	Baseline and hyper-parameter setting	127

5.4.4	Results	132
5.4.5	Accuracy-diversity trade-off	133
5.4.6	Implication of Research	136
5.5	Ablation Study	136
5.6	Statistical Significance Test	138
5.7	Summary	140
6	Conclusions and Future Work	143
6.1	Conclusion	143
6.2	Possible research directions	147
6.2.1	Music Recommendation System	147
6.2.2	Diversity in Recommendation System	148
	References	149
6.3	Conference Paper	171
	List of Publications	170
