List of Figures	i
List of Tables	ix
List of Abbreviations and Symbols.....	xi
Preface.....	xv
Chapter 1	1
Introduction.....	1
1.1. Introduction and Literature Review	1
1.1.1.Overview of multimachine power networks.....	1
1.1.2.Overview of microgrid power networks.....	4
1.2. The motivation and research gap.....	7
1.2.1.For multimachine power networks.....	7
1.2.2.For microgrid power networks.....	7
1.3. Defined Control Objectives.....	8
1.4. Thesis Organization.....	9
Chapter 2	11
2.1 Introduction.....	11
2.2 Power system dynamics & problem formulation	13
2.3 Control problem formulation.....	14
2.3.1.Design of optimally Tuned Backstepping Excitation Control.....	17
2.3.2.Design of Nonlinear functional Observer and Continuous Twisting control	20
2.3.3.Nonlinearity estimation with the nonlinear Observer.....	21
2.3.4.Continuous twisting algorithm for matched/mismatched uncertainties in the presence of power system nonlinearities.....	22
2.4 Controller verification and simulation results	26
2.4.1.Controller efficacy under uncertainty.....	31
2.4.2.Controller resiliency against fault.....	33
2.5 Real-Time Verification of the Proposed Scheme	35

2.6	Summary.....	37
Chapter 3	39
3.1	Introduction.....	40
3.2	Power System Dynamics and Control Formulation	43
3.3	Control Problem Formulation and Strategy.....	43
3.3.1	Preliminaries	44
3.3.1.1	Barbalat Lemma for UUB stability	44
3.3.1.2	ECRNN Configuration.....	45
3.3.1.3	Three Cn -Class continuous functions.....	48
3.4	ECRNN Based Backstepping Excitation Control.....	49
3.5	Verification and Simulation of Proposed Scheme	55
3.5.1	Resiliency towards external disturbance.....	63
3.5.2	Renewable penetration and control efficacy test.....	65
3.6	Controller verification using the RTDS platform.....	68
3.7	Summary.....	71
Chapter 4	73
4.1	Introduction.....	73
4.2	Power System Dynamics for Control Strategy and Problem Formulation.....	77
4.3	Recursive error compensation	85
4.4	Controller verification and simulation results	87
4.5	Real-Time Validation of proposed scheme using.....	101
	RTDS Platform	101
4.6	Summary.....	104
Chapter 5	105
5.1	Introduction.....	106
5.2	Microgrid Model and Problem Identification.....	109
5.3	Sliding Mode Controller Designing with.....	111
	Super Twisting reaching Law for Microgrid	111
5.3.1	Proposed Event Trigger Approach Under Super Twisting SMC Law	112
5.3.2	Condition for event-based trigger control.....	113

5.3.3.Proof of the Stability and Robustness.....	115
5.3.4.Calculation of inter execution time for finite time convergence.	116
5.4 Sliding Mode Based IDO Design	117
5.4.1.Matched/Unmatched uncertainty formulation.	117
5.4.2.IDO Design for Matched/Unmatched uncertainty.....	119
5.5 Result Verification of Microgrid Control.....	120
5.5.1.Typhoon based real time simulation results verification.	124
5.5.2.Result Discussion and Main findings.	126
5.6 Summary.....	128
Chapter 6	129
6.1 Introduction.....	129
6.2 Microgrid control design for DOS attack	132
6.3 Control objective under DOS attack.....	133
6.3.1.Secondary control	134
6.3.1.1. Preliminaries of Graph theory	135
6.3.1.2. Consensus based voltage error.	135
6.3.1.3. Consensus based frequency error.....	135
6.4 Sliding mode-based control strategy.....	136
6.4.1.Event based SMC scheme in absence of DOS attack.....	138
6.4.2.Event based control in presence of DOS attack.....	139
6.5 DOS attack Preliminaries time limitations	140
6.5.1.Parameter design for the convergence rate in absence of DOS.....	142
6.5.2.Parameter design for the divergence rate in presence of DOS	144
6.6 Verification and result analysis of the proposed scheme.....	149
6.6.1.Simulation results obtained from the proposed scheme and discussion.....	150
6.7 Summary	154
Chapter 7	155
7.1 Future scope of work	156
References:.....	157
List of Publication	175
A. Publication in referred and peer-reviewed Journals.....	175

B. Publication in Book Chapter.....	175
C. Publication in international conferences	176
