LIST OF ABBREVIATIONS.....	xxv
LIST OF SYMBOLS	xxix
PREFACE.....	xxxv
Chapter 1 INTRODUCTION.....	1
1.1 BACKGROUND OVERVIEW.....	1
1.2 LITERATURE SURVEY	4
1.2.1 Electric Vehicles for Ancillary Services	5
1.2.2 Controlling Charging/Discharging Power of EVs for Frequency Regulation.....	6
1.2.3 Optimizing the EV Charging/Discharging for Economic Benefits	8
1.2.4 Network Re-configuration Techniques with Different Objective Functions.....	9
1.2.5 Volt/Var Optimization (VVO) and Conservation Voltage Reduction (CVR) for Higher Cost Benefits	10
1.2.6 The challenge of Fast and Non-spurious Islanding Detection Scheme	11
1.3 RESEARCH GAP AND MOTIVATION	13
1.4 RESEARCH OBJECTIVES	15
1.5 THESIS ORGANIZATION	15
Chapter 2 OPTIMAL SCHEDULING OF PEVS FOR CHARGING COST MINIMIZATION IN THE RE-CONFIGURABLE NETWORK CONSIDERING CVR.....	17
2.1 INTRODUCTION	17
2.2 PROBLEM DEFINITION AND FORMULATION	18
2.2.1 Charging cost of PEV	20
2.2.2 Battery degradation cost in V2G scenario.....	20

2.2.3	Constraints for PEV battery	21
2.2.4	System constraints	22
2.3	CHARGING TARIFF FRAMEWORK	23
2.4	GRAPHICAL APPROACH FOR NETWORK RE-CONFIGURATION	25
2.5	CONSERVATION VOLTAGE REDUCTION	28
2.6	CASE STUDY	29
2.6.1	Base case	31
2.6.2	Network re-configuration	34
2.6.3	Optimal charging of PEVs in the presence of Conservation Voltage Reduction (CVR)	37
2.7	RESULTS AND DISCUSSION	42
2.8	SUMMARY	45
Chapter 3 INTELLIGENT SCHEDULING OF PEVS FOR CUSTOMER BENEFITS, AND PROVIDING VOLTAGE SUPPORT TO THE MICRO-GRID		47
3.1	INTRODUCTION	47
3.2	TEST SYSTEM MODELLING	48
3.3	PROBLEM FORMULATION	50
3.3.1	Charging rate constraints	52
3.3.2	Constraints on the state of charge	52
3.3.3	Power flow balance constraint	53
3.3.4	Voltage level constraints	53
3.4	CASE STUDY	54
3.4.1	Case I: Voltage profiles within tolerance limits (Test System I)	57
3.4.2	Case II: Voltage profiles violating tolerance limits (Test System II)	59
3.4.3	Case III: PEVs initial SOC near battery capacity for both the Test Systems	62
3.5	VALIDATION OF THE PROPOSED SCHEME ON A REAL-TIME DIGITAL SIMULATOR (RTDS) PLATFORM	70
3.6	RESULTS AND DISCUSSION	77
3.7	SUMMARY	80
Chapter 4 APPLICATION OF ELECTRIC VEHICLES FOR FREQUENCY REGULATION USING SOC-BASED V2G CONTROLLER		81
4.1	INTRODUCTION	81
4.2	SYSTEM MODELLING AND SOLUTION METHODOLOGY	82
4.2.1	Power system network modelling	83
4.2.2	EV modelling	86

4.2.3	Transient Frequency Deviation Index (TFDI).....	91
4.3	PROBLEM FORMULATION	93
4.4	SIMULATED CASE STUDY.....	96
4.4.1	The disturbance caused by simulating fault	96
4.4.2	The disturbance caused by the change in reference power	97
4.5	RESULTS AND DISCUSSION	99
4.5.1	The disturbance caused by simulating fault	99
4.5.2	The disturbance caused by a change in reference power.....	102
4.6	SUMMARY	106
Chapter 5 UN-INTENTIONAL ISLANDING DETECTION SCHEME IN V2G ENVIRONMENT FOR PROTECTION OF ELECTRIC VEHICLES CHARGING STATION.....		
		107
5.1	INTRODUCTION	107
5.2	SYSTEM DESCRIPTION.....	108
5.3	PROBLEM DEFINITION AND FORMULATION	109
5.3.1	Sandia Frequency Shift (SFS) Method.....	110
5.3.2	Proposed Modified Sandia Frequency Shift (M-SFS) Method	111
5.3.3	Fast Rate of Change of Frequency (FROCOF) Method.....	113
5.3.4	Proposed hybrid IDS	114
5.4	SIMULATION RESULTS AND DISCUSSION	117
5.4.1	Proposed hybrid IDS operation under different Active Power Mismatch (APM) and Reactive Power Mismatch (RPM)	117
5.4.2	Operation under different load switching.....	120
5.4.3	Operation under capacitor and motor switching.....	121
5.4.4	Operation under different fault scenarios	122
5.4.5	Operation under different X/R ratios of the grid	123
5.4.6	Operation under different load quality factors	124
5.5	SUMMARY	125
Chapter 6 CONCLUSION.....		
		127
6.1	SUMMARY OF IMPORTANT FINDINGS.....	128
6.2	FUTURE SCOPE	129
