Chapter 1 INTRODUCTION 1
1.1 **GENERAL** 1
1.1.1 Distributed Generator (DG) – An overview 1
1.1.2 Recent Advancement in DG Configurations 5
1.1.3 Network Reconfiguration – An overview 6
1.2 **LITERATURE SURVEY** 7
1.2.1 Predicting voltage instability in distribution system 9
1.2.2 Analytical approaches to solve DG placement problem 13
1.2.3 Artificial intelligent methods to solve DG placement problem 15
1.2.4 DG placement based on voltage stability approach 17
1.2.5 Classical approaches of network reconfiguration 21
1.2.6 Network reconfiguration based on voltage stability approach 23
1.2.7 Simultaneous solution of network reconfiguration and DG placement problems 24
1.2.8 DG placement and reconfiguration under P, Q and PQV buses 26
1.2.9 DG placement and reconfiguration under voltage dependent time-varying loads 27
1.3 **MOTIVATIONS** 29
1.4 **OBJECTIVES** 30
1.5 **THESIS ORGANIZATION** 31
Chapter 2 PLACEMENT OF MULTI-DISTRIBUTED GENERATIONS THROUGH MODIFIED GWO FOR LOSS MINIMIZATION 33
2.1 **INTRODUCTION** 33
2.2 **GREY WOLF OPTIMIZATION SEARCH ALGORITHM: AN OVERVIEW** 34
2.2.1 Encircling 35
2.2.2 Hunting 36
2.2.3 Attacking 36
2.2.4 Acceleration coefficient 37

2.3 MODIFICATION IN THE GWO ALGORITHM 38
2.3.1 Adaptive acceleration coefficient 38
2.3.2 Pseudo code for modified GWO algorithm 39
2.4 DG MODEL 40
2.5 PROBLEM FORMULATION 40
2.5.1 Power losses 41
2.5.2 Equality constraints 44
2.5.3 Inequality constraints of DG size and system operation 44
2.6 APPLICATION OF MODIFIED GWO FOR DG PLACEMENT 46
2.7 RESULTS AND DISCUSSION 47
2.8 SUMMARY 54
Chapter 3 VOLTAGE STABILITY ENHANCEMENT AND LOSS REDUCTION WITH DG AND RECONFIGURATION 57
3.1 INTRODUCTION 57
3.2 SOLUTION METHOD FOR THE RECONFIGURATION 58
3.2.1 Reconfiguration using fundamental loops method and its demerits 59
3.2.2 Rule based decision variables modification 63
3.3 PROBLEM FORMULATION: OBJECTIVE FUNCTION AND CONSTRAINTS 67
3.3.1 Proposed Multi-objective Function 67
3.4 PROPOSED MODIFIED GWO BASED ALGORITHM FOR MULTI-OBJECTIVE FUNCTION 69
3.5 MAXIMUM LOADABILITY CALCULATION 72
3.6 INDICES TO EXAMINE SYSTEM PERFORMANCE 75
3.6.1 Number of voltage limit violating buses (NVVB) 75
3.6.2 Voltage deviation index (VDI) 75
3.6.3 Voltage profile improvement index (VPI) 75
3.6.4 Qualified load index (QLI) 76
3.6.5 Active power loss reduction (%APLR) 77
3.6.6 Reactive power loss reduction (%QPLR) 77
3.7 RESULTS AND DISCUSSION 78
3.7.1 Test system 1 (33-bus RDS) 78
3.7.2 Test system 2 (69-bus RDS) 83
3.8 SUMMARY 88
Chapter 4 VOLTAGE STABILITY ENHANCEMENT AND LOSS REDUCTION UNDER PRESENCE OF P/Q AND PQV BUSES 89
4.1 INTRODUCTION 89
4.2 REFORMULATION OF NRLF EQUATION UNDER PQV AND P/Q BUSES 90
4.2.1 NRLF Equation under PQV and P buses 90

4.2.2 NRLF Equation under PQV and Q buses 93
4.3 PROBLEM FORMULATION: OBJECTIVE FUNCTION AND CONSTRAINTS 96
4.3.1 Proposed new multi-objective function 96
4.4 PROPOSED GWO BASED ALGORITHM FOR MULTI-OBJECTIVE FUNCTION 98
4.5 RESULTS AND DISCUSSION 100
4.5.1 Test system 1 (33-bus RDS) 100
4.5.2 Test system 2 (69-bus RDS) 118
4.6 SUMMARY 138
Chapter 5 OPTIMAL DG ALLOCATION AND RECONFIGURATION CONSIDERING TIME-VARYING VOLTAGE DEPENDENT LOAD 141
5.1 INTRODUCTION 141
5.2 LOAD MODEL 141
5.3 COLLECTIVE POWER LOSS SENSITIVITY 143
5.4 PROBLEM FORMULATION: OBJECTIVE FUNCTION AND CONSTRAINTS 144
5.4.1 Proposed new multi-objective function 145
5.5 RESULTS AND DISCUSSION 147
5.5.1 Test system 1 (33-bus RDS) 148
5.5.2 Test system 2 (69-bus RDS) 158
5.6 SUMMARY 167
Chapter 6 CONCLUSION AND FUTURE SCOPE 169
6.1 GENERAL 169
6.2 SUMMARY OF IMPORTANT FINDINGS 170
6.3 FUTURE SCOPE 171
