<b>Preface</b>	<b>xxviii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Background	2
1.1.1 Fractional calculus	2
1.1.2 Fractional order partial differential equations	5
1.1.2.1 Riesz-space fractional partial differential equations	6
1.1.2.2 Time fractional Black-Scholes model (TFBSM)	8
1.1.2.3 Time-fractional wave equation (TFWE)	10
1.1.2.4 Time fractional telegraph equation (TFTE)	11
1.2 Definition of some fractional derivatives	11
1.3 Literature review	14
1.3.1 Literature review on Riesz-fractional partial differential equation	14
1.3.2 Literature review on time fractional Black-Scholes model governing European option	15
1.3.3 Literature review on approximation of the Caputo derivatives and time fractional wave equation	17
1.3.4 Literature review on time fractional telegraph equation	19
1.4 Mathematical preliminaries	20
1.4.1 Legendre polynomials	20

---

1.4.2	Chebyshev polynomials of second kind . . . . .	21
1.4.3	Function approximation . . . . .	22
1.5	Numerical methods . . . . .	23
1.5.1	Operational matrices . . . . .	23
1.5.1.1	Kronecker product . . . . .	25
1.5.2	Finite difference method . . . . .	25
1.6	Challenges and motivations . . . . .	27
1.7	Objective of the thesis . . . . .	28
<b>2</b>	<b>Efficient numerical algorithms for Riesz-space fractional partial differential equations based on finite difference/operational matrix</b>	<b>29</b>
2.1	Introduction . . . . .	30
2.2	Matrix transform method and the operational matrix . . . . .	32
2.2.1	Matrix transform method for Riesz space fractional derivative	32
2.2.2	Function approximation by orthogonal polynomials . . . . .	35
2.2.2.1	Shifted Legendre polynomials . . . . .	35
2.2.2.2	Shifted Chebyshev polynomial of second kind . . . . .	36
2.2.2.3	Function approximation . . . . .	37
2.2.2.4	Operational matrix of integration . . . . .	38
2.3	Construction of numerical scheme for RFDE and RFADE . . . . .	39
2.3.1	Numerical scheme for Riesz fractional diffusion equation (RFDE)	39
2.3.2	Numerical method for Riesz fractional advection dispersion equation (RFADE) . . . . .	45
2.4	Optimal error bounds of numerical approximation . . . . .	49
2.5	Numerical examples . . . . .	53
2.5.1	Numerical examples for Riesz-space fractional diffusion equation	54
2.5.2	Numerical example for Riesz-space fractional advection dispersion equation . . . . .	64
2.6	Appendix . . . . .	76
2.6.1	Derivation of equation (2.39) . . . . .	76
2.6.2	Derivation of equation (2.52) . . . . .	78
2.7	Conclusion . . . . .	80
<b>3</b>	<b>Computational algorithm for financial mathematical model based on European option</b>	<b>81</b>
3.1	Introduction . . . . .	82
3.1.1	The time-fractional Black-Scholes model . . . . .	82
3.1.2	Main contribution of this chapter . . . . .	85
3.2	Temporal discretization . . . . .	86
3.2.1	L1-2 approximation of the Caputo derivatives . . . . .	86
3.3	Basis function and operational matrices . . . . .	91
3.3.1	Shifted Legendre polynomials . . . . .	91

---

3.3.2	Shifted Chebyshev polynomial of second kind . . . . .	92
3.3.3	Function approximation . . . . .	93
3.3.4	The operational matrix . . . . .	93
3.3.5	Spatial approximation . . . . .	94
3.4	Derivation of numerical algorithm for TFBSM . . . . .	97
3.5	Stability and convergence analysis of the numerical scheme . . . . .	101
3.5.1	Stability analysis . . . . .	101
3.5.2	Convergence analysis . . . . .	107
3.6	Numerical results and discussion . . . . .	113
3.6.1	Numerical stability . . . . .	114
3.6.2	Numerical examples for the TFBSM governing European op- tions . . . . .	115
3.6.3	The study of effects of different parameters on the European call/put option . . . . .	128
3.7	Conclusion . . . . .	132
<b>4</b>	<b>L3 approximation of the Caputo derivative and its application to time-fractional wave equation</b>	<b>135</b>
4.1	Introduction . . . . .	136
4.1.1	Purpose and contribution of this chapter . . . . .	136
4.2	Formulation of the novel L3 approximation of the Caputo derivative .	138
4.2.1	Derivation of numerical scheme for TFWE . . . . .	144
4.3	Formulation of modified L3 (ML3) approximation of the Caputo deriva- tives . . . . .	148
4.4	Numerical Examples . . . . .	152
4.4.1	Application to TFWEs . . . . .	156
4.4.1.1	Numerical Stability . . . . .	157
4.5	Conclusion . . . . .	174
4.5.1	Future work . . . . .	174
<b>5</b>	<b>A new difference scheme for time fractional telegraph equation</b>	<b>177</b>
5.1	Introduction . . . . .	178
5.1.1	Our contribution . . . . .	178
5.2	Time discretization . . . . .	179
5.2.1	L3 approximation of the Caputo derivative of order $\alpha \in (1, 2)$	179
5.2.2	L123 approximation of the Caputo derivative of order $\beta \in (0, 1)$	181
5.3	Numerical scheme for TFTE . . . . .	183
5.4	Numerical examples . . . . .	187
5.5	Conclusion . . . . .	209
