1 INTRODUCTION AND LITERATURE REVIEW	1
1.1 Mathematical Modeling and Applications	1
1.2 Fourier's Law of Heat Conduction and its Drawback	3
1.2.1 Fourier's law of heat conduction:	3
1.2.2 Drawbacks of fourier's law:	4
1.3 Thermoelasticity: Definition and Applications	4
1.3.1 Classical coupled theory of thermoelasticity and its limitations .	5
1.3.2 Generalized thermoelasticity	6
1.3.2.1 Lord-Shulman thermoelasticity (LS) theory based on Cattaneo-Vernotte law:	7

1.3.2.2	Temperature-rate dependent thermoelasticity theory	8
1.3.2.3	Green-Naghdi (GN) thermoelasticity theory	9
1.3.2.4	Dual-Phase-Lag (DPL) and Three-Phase-Lag (TPL) thermoelasticity theories	9
1.3.2.5	MGT thermoelasticity theory	11
1.4	Development of Micro/Nano-Electromechanical Systems	11
1.4.1	Micro and nanomechanical resonators	12
1.4.2	Thermoelastic damping (TED)	13
1.4.3	Some micro-structure based beam and plate theories	14
1.4.3.1	Classical Euler-Bernoulli beam theory	14
1.4.3.2	Timoshenko beam theory	15
1.4.3.3	Kirchhoff plate theory	15
1.4.4	Background of non-classical continuum theories	16
1.4.4.1	Nonlocal elasticity theory	17
1.4.4.2	Modified couple stress theory (MCST)	17
1.4.4.3	Nonlocal strain gradient theory (NSGT)	18
1.5	Literature Review	19
1.6	Objective of the Thesis	27
2	DERIVATION OF GALERKIN-TYPE SOLUTION FOR MOORE-GIBSON-THOMPSON THERMOELASTICITY	29
2.1	Introduction ¹	29
2.2	Governing Equations	31
2.3	Galerkin-type Solution of Equations of Motion	32
2.4	Galerkin-type Solution of System of Equations for Steady Oscillations	36
2.5	General Solution of System of Equations for Steady Oscillations	39
2.6	Conclusion	43
3	FUNDAMENTAL SOLUTIONS OF MOORE-GIBSON-THOMPSON THERMOELASTICITY	45
3.1	Introduction ²	45
3.2	Governing Equations	46
3.3	Fundamental Solution	48
3.4	Short-time Approximated Fundamental Solutions	54
3.5	Laplace Inversion	56
3.6	Representation of Fundamental Solutions for Steady Oscillation	58
3.7	Conclusion	62

4	THERMOELASTIC DAMPING AND VIBRATION ANALYSIS FOR MICRO-BEAM RESONATORS BASED ON MOORE-GIBSON THOMPSON HEAT CONDUCTION	63
4.1	Thermoelastic Damping Analysis for Micro-Beam Resonators in the Frame of Moore-Gibson-Thompson (MGT) Thermoelasticity Theory considering Size Effects	63
4.1.1	Introduction ³	63
4.1.2	Problem formulation	66
4.1.2.1	Basics of the modified couple stress theory (MCST)	66
4.1.2.2	Coupled heat conduction equation based on Moore-Gibson-Thompson (MGT) thermoelasticity	67
4.1.3	Modeling of beam resonator	67
4.1.4	Quality factor of TED	70
4.1.5	Numerical results and discussion	72
4.1.6	Conclusion	79
4.2	Thermoelastic Vibration of Timoshenko Beam under the Modified Couple Stress Theory and Moore-Gibson-Thompson (MGT) Heat Conduction Model	82
4.2.1	Introduction ⁴	82
4.2.2	Dynamic equations formulation of Timoshenko microbeam	83
4.2.2.1	Kinematic relations	84
4.2.2.2	Hamilton's principle for Timoshenko microbeam based on MCST	86
4.2.3	Heat conduction equation for microbeam	88
4.2.4	Solution of the problem	92
4.2.5	Numerical results and discussion	95
4.2.6	Conclusion	101
5	ANALYSIS OF SIZE EFFECTS ON THERMOELASTIC DAMPING IN THE KIRCHHOFF'S PLATE RESONATOR UNDER MOORE-GIBSON-THOMPSON THERMOELASTICITY	103
5.1	Introduction ⁵	103
5.2	Dynamic Model of Rectangular Micro-plate	105
5.2.1	The Moore-Gibson-Thomson (MGT) thermoelasticity theory	105
5.3	Governing Equations of Rectangular Micro-plate Resonator	106
5.4	Quality Factor (QF) of TED	110

5.5	Results and Discussion	115
5.5.1	Analysis of thermoelastic attenuation and frequency shift . . .	115
5.5.2	Influence of material length-scale parameter on TED	119
5.5.3	Effect of aspect ratios ($a/h, b/h$) and dimensions of micro-plate on TED	121
5.5.4	Effect of relaxation parameter on TED	124
5.5.5	Effect of plate thickness on TED	124
5.5.6	Damping for different thermoelastic models	125
5.6	Conclusion	127
6	LEGENDRE WAVELET METHOD ON SIZE DEPENDENT BEND- ING ANALYSIS OF NANOBEM UNDER NONLOCAL STRAIN GRADIENT THEORY	129
6.1	Introduction ⁶	129
6.2	Theoretical Preliminaries	130
6.2.1	The basics of nonlocal strain gradient theory (NSGT)	131
6.2.2	Equation of motion of nanobeam resonator	133
6.2.3	Coupled heat conduction equation for the Moore–Gibson–Thompson (MGT) Theory	135
6.3	Deflection and Temperature Field	135
6.4	Legendre Wavelets	137
6.4.1	Function approximation	138
6.4.2	Convergence of Legendre wavelets	138
6.5	Solution Procedure	139
6.5.1	Space discretization by Legendre wavelets	140
6.5.2	Inversion of Laplace transform	142
6.6	Numerical results and discussion	143
6.6.1	Validation of numerical results	143
6.6.2	Nonlocal effect in deflection	144
6.6.3	Effect of length scale parameter	145
6.6.4	Effect of different aspect ratio $\frac{L}{h}$	146
6.6.5	Deflection and temperature under different theories	147
6.6.6	Effect of ramp time parameter t_0	148
6.7	Conclusion	150
7	SUMMARY OF THE THESIS AND SCOPE FOR FURTHER WORK	153
7.1	Summary	153

7.2 Future Scope	156
BIBLIOGRAPHY	159
APPENDIX	175
PUBLICATIONS AND CONFERENCES	177
