Contents

Abbreviations xv

Preface xvii

1 Introduction 1
- 1.1 Basic definitions . . . 3
- 1.2 Riemann-Liouville fractional derivatives and integrals . . . 5
- 1.3 Lizorkin space . . . 6
- 1.4 Fractional Fourier transform . . . 8
- 1.5 Pseudo-differential operators involving the fractional Fourier transform 9
- 1.6 The continuous fractional wavelet transform involving the fractional Fourier transform . . . 11
- 1.7 Hankel transform . . . 13

2 Pseudo-Differential Operators associated with modified Fractional Derivatives involving the Fractional Fourier Transform 17
- 2.1 Introduction . . . 17
- 2.2 Properties of the fractional Fourier transform . . . 20
- 2.3 Pseudo-differential operators . . . 27
- 2.4 Integral representation and boundedness of the pseudo-differential operator $T_{\sigma,\alpha}$ . . . 33
- 2.5 The Sobolev space . . . 36
- 2.6 Applications of pseudo-differential operators in fractional calculus . . . 41
- 2.7 Conclusions . . . 45

3 Abelian Theorems involving the Fractional Wavelet Transform 47
- 3.1 Introduction . . . 47
- 3.2 Abelian theorems for the fractional wavelet transform of functions . . . 50
- 3.3 Abelian theorems for the fractional wavelet transform of distributions 54
- 3.4 Application . . . 65
- 3.5 Conclusions . . . 67

4 The Fractional Hankel Transform and its Properties 69
4.1 Introduction 69
4.2 Foundation of the fractional Hankel transform 71
4.3 Properties of the fractional Hankel transform 76
4.4 Conclusions 83

5 Characterizations of Continuous Fractional Bessel Wavelet Transform and its Applications 85
5.1 Introduction 85
5.2 Properties of the fractional Bessel wavelet transform 87
5.3 Application of the fractional Bessel wavelet transform in Weighted Sobolev type space 99
5.4 Application of the fractional Bessel wavelet transform in integral equation related to time-invariant linear filter 102
5.5 Conclusions 111

Bibliography 113
