List of Contents **Page No.**

List of Figures ..... **xi**
List of Tables ..... **xiv**
List of Abbreviations ..... **xvi**
List of Symbols ..... **xviii**
Preface ..... **xx**
1. Introduction **1**
1.1 Wind Resources Assessment 2
1.2 Wind Power Density ($\overline{WPD}$) 5
1.3 Parent Wind Climate Modelling 6
1.4 Wind Turbine Characteristics 7
1.4.1 Availability Factor 7
1.4.2 Power Coefficient (C_p) /Efficiency of the Wind Turbine 7
1.4.3 Capacity Factor (CF) 8
1.5 Extreme Wind Climate Modelling 9
1.6 Wind Direction 9
1.7 Outline of the Thesis 10
2. Literature Review **13**
2.1 Review of Continuous Distributions 14
2.1.1 Weibull distribution (W.pdf) 14
2.1.2 Rayleigh Distribution 15
2.1.3 Gamma Distribution (G.pdf) 16
2.1.4 Normal Distribution/Gaussian and its Evolved Distributions (N.pdf) 16
2.1.4.1 Log-Normal Distribution 17
2.1.4.2 Square Root Normal Distribution 17
2.1.4.3 Truncated Normal Distribution 17
2.1.5 Mixture Distributions 18
2.1.6 Maximum Entropy Principle (MEP) 20
2.2. Comparative Study of Various Distributions for Wind Speed Assessment 20
2.3 Comparison of the *MEP* Distribution with the Weibull Distribution 24
2.4. Methods for Estimating the Parameters of the Distributions 27
2.4.1 Graphical / Least Square Method (LSM) 27
2.4.2 Method of Moments (MOM) 28

2.4.3 Maximum Likelihood Method (MLM) 29
2.4.4 Comparison of Different Methods to Estimate Parameters of the Weibull Distribution 30
2.5 Wind Turbine Characteristics 35
2.6 Extreme Wind Climate Modelling 38
2.6.1 Selection Criteria for Appropriate Types of Extreme Value Distribution 39
2.7 Wind Directional Distribution 40
2.7.1 von Mises Distribution (vM) 41
2.7.2 Mixture von Mises Distribution (mvM.pdf) 41
2.8 Research Gaps 43
2.9 Objectives 45
2.10 Contribution of the Current Research Work 46
3. Flaws in Wind Speed Sampling Technique: Methodology for Its Eradication using Weibull Distribution 47
3.1 Choice of the Class Width of Histograms 49
3.2. Biased Estimation of Weibull Parameters 52
3.3. Unbiased Estimation of Weibull parameter 54
3.3.1 Inverse Contour Plot 54
3.4. Determination of Unbiased Weibull parameter for Different Stations 56
3.5 Influence of Sampling Error for Estimation of Wind Power Density 64
3.6 Summary 65
4. Methods Employed to Estimate Weibull Parameters 66
4.1 Geographical Condition and Observation Period 67
4.2. Mathematical Models 69
4.2.1 Least Square Method or Graphical Method (LSM) 70
4.2.2 Method of Moments *(MOM)* 70
4.2.3 Empirical Method (EM) 71
4.2.4 Maximum Likelihood Method (MLM) 72
4.2.5 Modified Maximum Likelihood Method (MMLM) 72
4.2.6 Power Density Method (PDM) 73
4.2.7 Our New Proposal: The Modified Energy Pattern Factor Method (MEPF) 74
4.2.8 Random Variable Generation of the Weibull Distribution 78
4.2.9 The Weibull Quantile Function and the Detection of Extreme Wind Data 79
4.3 Results and Discussion 80

4.3.1 Comparison of Different Methods to Estimate the Weibull Parameters Based on Simulated Data 80

4.3.2 Step 1 of Wind Data Analysis: Do the Observed Data Follow a Weibull Distribution? 84

4.3.3 Step 2 of Wind Data Analysis: MEPF Estimates for Wind Speed, Wind Load, and Wind Power 85

4.4 Summary 89

5. Identification of Optimum Wind Turbine Parameters for Varied Wind Climate using A Novel Turbine Performance Index 90

5.1 Significance of Analyses of Monthly Average Wind Speed Data 94

5.2 Mathematical Analysis 95

5.2.1 Extrapolation of Wind Speed at Different Hub Heights 95

5.2.2 Capacity Factor (CF) and Power Output of the Wind Turbine 96

5.2.3 Power Coefficient (C_p) 98

5.2.4 Turbine Performance Index (TPI) 99

5.3 Accuracy Judgment Criteria 101

5.3.1 Coefficient of Determination [R^2 (%)] 101

5.3.2 Root Mean Square Error (RMSE) 102

5.3.3 Kolmogorov-Smirnov Test (K-S) 102

5.4 Results and Discussion 103

5.5 Summary 122

6. Mixture Distributions for Wind Speed Modelling 124

6.1 Mathematical Models 126

6.1.1 Mixture Weibull distribution (WW.pdf) 126

6.1.2 Mixture Gamma-Weibull distribution (GW.pdf) 127

6.1.3 Mixture Truncated Normal-Weibull distribution (TNW.pdf) 128

6.1.4 Two components Singly Truncated Normal Distribution (TNN.pdf) 129

6.1.5 Gamma-Gamma Distribution (GG.pdf) 130

6.1.6 Truncated Normal Gamma Distribution (TNG) 131

6.1.7 Maximum Entropy Principle (MEP.) 131

6.2 Accuracy Judgment Criteria 133

6.2.1 Akaike Information Criteria (AIC) 133

6.3 Results and Discussion 133

6.4 Summary 141

7. A Novel Approach for Accurate Assessment of Design Wind Speed for Variable Wind Climate 142

7.1 Selection Criteria for Appropriate Choice of Types of Wind Speed Data 144

7.2 Methods Employed for Identification of Extreme Data 145
7.3 Mathematical Model 147
7.3.1 Methodology Adopted for the Determination of Appropriate Threshold: Weibull Quantile Function 147
7.3.2 Extreme Value distribution (EVD) 147
7.4 Plotting Position Formulae 150
7.5 Results and Discussion 152
7.6 Summary 171
8. Wind Directional Analysis 173
8.1 Mathematical Model 176
8.1.1 von Mises Distribution (vM.pdf) 176
8.1.2 Mixture von Mises Distribution (mvM.pdf) 176
8.1.3 Kato-Jones Distribution (K-J.pdf) 179
8.2 Results and Discussion 180
8.3 Summary 187
9. Conclusions and Future Scope 188
9.1 Conclusions 188
9.2 Future Scope 192
