Title Page	i
Certificates	ii
Acknowledgement	v
Dedication	viii
Table of Contents	ix
List of Figures	xiv
List of Tables	xvi
Symbols used	xvii
Preface	xxi
1. Introduction	1
1.1. Background	2
1.1.1. Sustainable development of modern power generation system	3
1.1.2. Increasing renewable energy capacities	9
1.1.3. Importance of renewable distributed generation	15
1.1.3.1. Future growth of renewable distributed generation	16
1.1.3.1.1. Renewable distributed generation planning	18
1.1.3.1.1.1. Demand and supply	18
1.1.3.1.1.2. Financial support	20
1.1.3.1.2. Government policies	22
1.1.3.1.3. Government programmes	23
1.1.3.2. Regional management in renewable distributed generation	27
1.2. Thesis Objectives	29
1.3. Hypothesis and Assumptions	30

1.4. Structure of the Thesis	32
2. Literature review	36
2.1. Introduction	37
2.2. Selection of renewable distributed generation technology	38
2.3. Estimation of wind energy potential	45
2.4. Estimation of load demand distribution	49
2.5. Optimal planning of renewable distributed generation	52
2.6. Research gaps identified	55
3. Theoretical background	57
3.1. Conventional power generation	58
3.2. Distributed generation	61
3.2.1. Importance of distributed generation over conventional one	63
3.2.2. Use of distributed generation	66
3.2.2.1 Market liberalization	67
3.2.2.1.1 Peak load shaving	67
3.2.2.1.2 Power quality	68
3.2.2.1.3 Reliability	68
3.2.2.1.4. Alternative to expansion	69
3.2.2.2. Environmental concerns	70
3.2.2.2.1. Combined generation of heat and electricity	70
3.2.2.2.2. Efficient use of cheap fuel opportunities	71
3.2.2.2.3 Use of renewable energy sources	71
3.2.3. Types of distributed generation technologies and its applications	72
3.3. Renewable distributed generation	77
3.3.1. Increasing demand of renewable distributed generation	79

3.3.2. Benefits of renewable distributed generation	80
3.3.2.1. Operational	81
3.3.2.2. Economical	83
3.3.2.3. Environmental	85
3.4. Smart grid integration	86
3.4.1. Smart grid	90
3.4.2. Benefits of integration	92
3.4.3. Smart grid in India	93
4. Selection of renewable distributed generation technology	96
4.1. Introduction	97
4.2. Methodology	99
4.2.1. Performance evaluation using AHP method	99
4.2.2. VIKOR method	101
4.3. A case of BHU campus	105
4.4. Conclusion	109
5. Estimation of wind energy potential	111
5.1. Introduction	112
5.2. Data collection and organization	114
5.3. Wind speed distribution models	121
5.3.1. Statistical analysis	121
5.3.1.1. Weibull distribution	122
5.3.1.2. Gamma distribution	122
5.3.1.3. Lognormal distribution	123
5.3.2. Goodness-of-fit tests	123
5.3.2.1. Kolmogorov – Smirnov	124

5.3.2.2. Anderson- Darling	124
5.3.2.3. Cramer-von Mises	125
5.4. Results and discussions	126
5.5. Theoretical power density	131
5.6. Wind energy potential	132
5.7. Conclusion	133
6. Estimation of load demand distribution	135
6.1. Introduction	136
6.2. Demand side management in smart grid system	139
6.3. Stochastic models	145
6.3.1. Statistical analysis	145
6.3.1.1. Lognormal distribution	145
6.3.1.2. Gamma distribution	146
6.3.1.3. Weibull distribution	146
6.3.2. Goodness-of-fit tests	147
6.3.2.1. Kolmogorov – Smirnov	148
6.3.2.2. Anderson- Darling	148
6.3.2.3. Cramer-von Mises	149
6.4. Results and discussions	150
6.5. Optimal power flow	156
6.6. Conclusion	158
7. Optimal planning of renewable distributed generation	160
7.1. Introduction	161
7.2. System description	166
7.3. System components	168

7.3.1. Stochastic wind power output	168
7.3.2. Load demand uncertainty	170
7.4. Mathematical model	171
7.4.1. Objective function	171
7.4.2. Subject to constraint	172
7.5. Methodology	174
7.5.1. System modelling simulation using genetic algorithm	176
7.5.2. Solving steps	179
7.6. A case of BHU campus	180
7.6.1. Test system	180
7.6.2. Results and discussions	181
7.7. Conclusion	183
8. Summary and conclusions	184
8.1. Summary	185
8.2. Conclusions	187
8.3. Contributions	189
8.4. Limitations	190
8.5. Scope for further work	190
References	192
Appendix-A Code in R language for estimation of wind energy potential	210
Appendix-B Code in R language for estimation of load demand distribution	211
Appendix-C Code in Java language for optimal planning of renewable distributed generation	212
Appendix-D VIKOR method	223
List of Papers Published/Accepted/communicated/presented	229
