
TABLE OF CONTENT

| | |
|---|--------------|
| Preface | xiv-xvii |
| Acknowledgements | xviii-xx |
| List of Tables | xxi |
| List of Figures..... | xxii-xxvi |
| List of Symbols | xxvii-xxviii |
| 1.1 Introduction | 2 |
| 1.1.1 Introduction of aluminium alloy | 2 |
| 1.1.2 Application of aluminium alloy in the automotive sector..... | 3 |
| 1.1.3 Merits of aluminium alloy..... | 3 |
| 1.2 Research background | 4 |
| 1.3 Aim and objective..... | 5 |
| 2.1 Introduction..... | 8 |
| 2.2 Al-Si alloys and their applications..... | 8 |
| 2.2.1 Application of A308 alloys..... | 8 |
| 2.3 Metallurgy of cast Al-Si alloys..... | 8 |
| 2.3.1 Solidification Processes of Al-Si Alloy..... | 15 |
| 2.3.2 Effect of alloying elements..... | 17 |
| 2.4 Methods of grain refinement..... | 19 |
| 2.5 The mechanical vibration and its effects..... | 21 |
| 2.6 Mechanism of grain refinement..... | 22 |
| 2.6.1 Nucleation..... | 23 |
| 2.6.2 Growth of nuclei..... | 25 |
| 2.6.3 Effect of mould vibration on metallurgical properties during solidification.. | 29 |
| 2.7 Gaps in the literature..... | 44 |
| 2.8 Motivation..... | 45 |
| 2.9 Summary and outlook | 45 |
| 3.1 Introduction..... | 48 |
| 3.2 Outline of the investigation..... | 48 |
| 3.2.1 Fabrication of the die | 50 |
| 3.2.2 Die and fixture making..... | 51 |
| 3.2.3 Fabrication and calibration of horizontal vibration set-up..... | 52 |

| | | |
|---------|--|----|
| 3.2.4 | Process design and procedure for frequency and amplitude range selection | 54 |
| 3.2.5 | Selection of material | 55 |
| 3.2.6 | Pouring of casting of samples under stationary and vibratory conditions.... | 56 |
| 3.3 | Characterizations..... | 58 |
| 3.3.1 | Machines used for characterization..... | 58 |
| 3.3.2 | Density and % porosity measurements..... | 59 |
| 3.3.3 | Optical microscope | 60 |
| 3.3.4 | Scanning electron microscope..... | 61 |
| 3.3.5 | X-ray diffractometer | 61 |
| 3.3.6 | Tensile and microhardness test..... | 61 |
| 3.3.6.1 | Preparation of tensile test specimen..... | 62 |
| 3.3.6.2 | Preparation of microhardness test specimen | 62 |
| 3.3.7 | Characterization & correlation of the observed results using microstructure | 63 |
| 3.3.8 | Fractography of tensile test samples..... | 64 |
| 3.4 | Summary | 64 |
| 4.1 | Introduction..... | 66 |
| 4.2 | Effects of low-frequency range horizontal mould vibration on the physical, metallurgical, and mechanical properties of die-cast A308 alloy..... | 66 |
| 4.3 | Physical properties..... | 67 |
| 4.3.1 | Density, porosity and cooling rate..... | 67 |
| 4.4 | Metallurgical observations..... | 69 |
| 4.4.1 | Microstructure analysis..... | 69 |
| 4.4.2 | Morphology of the metallurgical features..... | 72 |
| 4.4.3 | Mechanism of dendrite fragmentation..... | 73 |
| 4.4.4 | X-ray Diffraction analysis..... | 74 |
| 4.4.5 | Energy dispersive spectrometer (EDS) analysis..... | 75 |
| 4.5 | Mechanical properties | 76 |
| 4.5.1 | Tensile test results..... | 76 |
| 4.5.2 | Hardness measurement..... | 78 |
| 4.5.3 | Mechanism for hardness improvement..... | 79 |
| 4.6 | Fractography..... | 80 |
| 4.7 | Summary | 82 |

| | | |
|-------|---|-----|
| 5.1 | Introduction..... | 84 |
| 5.2 | Effects of medium-frequency range horizontal mould vibration on the physical, metallurgical, and mechanical properties of die-cast A308 alloy | 84 |
| 5.3 | Results and discussion..... | 85 |
| 5.3.1 | Microstructural observation..... | 85 |
| 5.3.2 | X-ray diffraction and SEM-EDS analysis..... | 89 |
| 5.4 | Density and porosity analysis | 91 |
| 5.5 | Mechanical properties..... | 92 |
| 5.5.1 | Tensile Properties..... | 92 |
| 5.5.2 | Microhardness | 93 |
| 5.6 | Fractography..... | 94 |
| 5.7 | Summary..... | 96 |
| 6.1 | Introduction..... | 98 |
| 6.2 | Effects of high-frequency range horizontal mould vibration on the physical, metallurgical, and mechanical properties of die-cast A308 alloy | 98 |
| 6.3 | Physical properties..... | 99 |
| 6.3.1 | Density, porosity and cooling rate..... | 99 |
| 6.4 | Metallurgical observations..... | 100 |
| 6.4.1 | Morphology of the metallurgical features..... | 103 |
| 6.4.2 | X-ray diffraction (XRD) analysis..... | 105 |
| 6.4.3 | Energy dispersive spectrometer (EDS) analysis..... | 106 |
| 6.5 | Mechanical properties | 106 |
| 6.5.1 | Tensile properties..... | 106 |
| 6.5.2 | Microhardness | 109 |
| 6.6 | Fractography | 110 |
| 6.7 | Summary..... | 113 |
| 7.1 | Summary of thesis and concluding remarks..... | 116 |
| 7.2.1 | Comparison of physical properties under low/medium /high-frequency | 118 |
| 7.2.2 | Comparison of metallurgical properties under low/medium/high-frequency | 118 |
| 7.2.3 | Comparison of mechanical properties under low/medium/high-frequency... | 119 |
| 7.3 | Future perspective..... | 119 |
| | References..... | 121 |
| | List of publications..... | 135 |
