List of tables	xvii
Nomenclature	xix
Preface	xxi
Chapter 1 Introduction	25
1.1 Natural materials and Metamaterials	27
1.2 History of metamaterials.....	27
1.3 Classifications of materials	29
1.4 Maxwell's equations: Interaction of electromagnetic waves with materials.....	32
1.5 Snell's law.....	35
1.6 Negative permittivity and permeability medium	37
1.7 Materials' electronic properties	41
1.8 Metal and dielectric's optical properties	42
1.9 Metamaterial applications.....	46
1.10 Waves at the interface between two media.....	51
1.11 Absorption of light by structured metal surfaces.....	55
1.12 Absorber with anti-reflection coatings.....	56
1.13 Resonant absorbers	58
1.14 Surface plasmon-based absorbers	59
1.15 Perfect absorber based on metamaterials.....	60
1.16 Realization of near unity absorbance in metamaterial	62
1.17 Recent developments in perfect absorber metamaterial	66
1.18 Metamaterials perfect absorber in the different frequency regions	68
1.18.1 Perfect metamaterial absorber in the microwave frequency.....	68
1.18.2 Perfect metamaterial absorber in terahertz (THz) frequency.....	70
1.18.3 Perfect metamaterial absorber in the infrared frequency.....	71
1.18.4 Perfect metamaterial absorber in the visible frequency.....	72
1.19 Methodology for analyzing.....	73
1.20 Selection of numerical simulation software.....	75
1.20.1 Finite Element Method (FEM).....	76
1.20.2 Finite Difference Time Domain (FDTD).....	77
1.20.3 Finite Integration Technique (FIT)	78

1.21 Geometrical parameters and materials selection.....	79
1.22 Motivation of the thesis	80
1.22.1 Solar energy	81
1.22.2 Metamaterial absorber	83
Chapter 2 Perfect metamaterial absorber in the visible region	85
2.1 Introduction.....	87
2.2 Design and Simulation.....	90
2.2.1 Geometry and Materials.....	90
2.2.2 Simulation software and boundary conditions.....	90
2.2.3 Methodology and absorbance of the proposed unit cell	92
2.3. Results and discussion	93
2.3.1 Charsterstics of absorbance.....	93
2.3.2 Effective values of permittivity and permeability	95
2.3.3 Effect of resonators on absorbance	96
2.3.4 Absorbance performance on period and thickness of the dielectric layer	97
2.3.5 Absorbance performance on the thickness and diagonal length of resonators	98
2.3.6 Absorbance performance on polarization and incidence angles.....	99
2.3.7 Absorbance comparison with various metals and dielectric layers	101
2.3.8 Conversion efficiency performance on dielectric layer and periodicity	102
2.3.9 Short circuit current density and solar spectrum.....	103
2.4 Conclusions.....	104
Chapter 3 Broadband metamaterial absorber in the visible region using a petal-shaped resonator	107
3.1 Introduction.....	109
3.2 Design, simulation setup, and absorbance of the structure	111
3.2.1 Materials choice and structural parameters.....	111
3.2.2 Simulation setup.....	112
3.2.3 The Absorbance of a unit cell	113
3.2.4 Extraction of S-parameters	114
3.3 Result and discussion.....	116
3.3.1 Effect of the thickness of resonators	116
3.3.2 Effect of the semi-major and semi-minor axis of the petal-shaped resonator	117
3.3.3 Effect of the thickness of the dielectric layer.....	118
3.3.4 Polarization and incident angle independency.....	119
3.3.5 Absorbance comparison with various spacer planes and metals	121
3.3.6 Conversion efficiency $A_{AM1.5}$ (%).....	122

3.3.7 Short-circuit current density (J_{sc}), Solar spectrum and Efficiency of solar cells	123
3.3.8 Comparative study	126
3.4 Conclusion	127
Chapter 4 Tungsten-based broadband perfect metamaterial absorber in visible to near-infrared regions	129
4.1 Introduction	131
4.2 Design and Simulation	133
4.2.1 Geometry and Materials	133
4.2.2 Methodology and absorption of the proposed unit cell	135
4.2.3 Simulation software and boundary conditions	137
4.3 Results and discussion	138
4.3.1 Absorption characteristics	138
4.3.2 Cross-polarization and Co-polarization with polarization conversation ratio	139
4.3.3 Parametric analysis of the unit cell	140
4.3.4 Polarization and incident angle effect	142
4.3.5 Absorption with different dielectric materials	144
4.3.6 Comparative study	145
4.3.7 Constitutive electromagnetic parameters retrieval	146
4.3.8 Performance evaluation of conversion efficiency	147
4.3.9 Performance evaluation of short circuit current density and solar spectrum	149
4.4 Conclusions	150
Chapter 5 Highly effective GaAs split-disk resonator-based metamaterial absorber	153
5.1 Introduction	155
5.2 Geometry, Parameters, Simulation setup, and Methods	158
5.2.1 Design and geometry, parameters of unit cell structure	158
5.2.2 Simulation setup	159
5.2.3 Absorption characteristics	160
5.3 Result and Discussion	161
5.3.1 Impedance and the absorbance of the proposed absorber	161
5.3.2 Effect of Co-polarization and Cross-polarization on absorption	164
5.3.3 Parametric study of unit cell	165
5.3.4 Absorption performance with polarization angles	167
5.3.5 Absorption performance with incident angles	168
5.3.6 Absorption performance with different metals and dielectric layers	170
5.3.7 Short circuit current density of the proposed absorber	171

5.3.8 Electric field and Magnetic field analysis.....	173
5.3.9 Comparative study	175
5.3.10 Illuminated $J-V$ plots of GaAs solar cells.....	176
5.4 Conclusion	179
Chapter 6 Conclusion	181
6.1 Summary.....	183
6.2 Future Scope of the study	186
Bibliography	187
List of Publications	203
