

LIST OF TABLES

Table No.	Caption	Page No.
Table 1.1.	Classification of lubricant additives.	4
Table 2.1.	Biodegradability of different base oil.	17
Table 2.2.	Composition of common vegetable oils.	17
Table 2.3.	Structure of fatty acid, physico-chemical properties and application of different vegetable oils.	19
Table 2.4.	Possible ZDDP substitutes by low- and zero- SAPS additives.	23
Table 2.5.	Summary of tribo-performance for nanolubricants with metallic nanoparticles.	25
Table 2.6.	Summary of tribo-performance for nanolubricants with oxide based nanoparticles.	27
Table 2.7.	The summary of tribo-performance of different lubricants with carbon allotropes as additives.	29
Table 2.8.	The summary of tribo-performance of other types of nanoparticles as a lubricant additive.	30
Table 2.9.	Summary of some nanoparticles as a biolubricant additive in tribological contacts.	31
Table 3.1.	Details of explored biolubricants.	41
Table 3.2.	List of the analytical grade chemicals used in the present study.	42
Table 3.3.	List of additives used in the oil.	43
Table 3.4.	Composition of AISI 52100 steel balls.	45
Table 3.5.	ASTM standard followed for evaluating the tribological properties of different lubricant compositions by using four ball	47

	tester.	
Table 4.1.	List of saturates and unsaturates in percentage for different biolubricants.	59
Table 4.2.	Detailed composition of fatty acid structure (in %) of biolubricants.	60
Table 4.3.	Summary of the average WSD on the test ball lubricated with different biolubricants.	63
Table 4.4.	Summary of r.m.s. surface roughness of the worn surfaces lubricated with different biolubricants.	68
Table 4.5.	Summary of mean coefficient of friction for different biolubricants.	73
Table 4.6.	The initial decomposition temperature of the biolubricants.	74
Table 5.1.	Diffraction angle and corresponding Miller plane (h k l) from maximum to minimum intensity of XRD pattern.	79
Table 5.2.	WSD for different concentration of ZDDP and CCTO in CO and PO.	90
Table 5.3.	Worn surface roughness for different additive based CO and PO compositions.	96
Table 5.4.	Average COF and interfacial shear stress for ZDDP and CCTO additive based CO and PO compositions.	102
Table 5.5.	Summary of EP behavior for different additive based CO and PO compositions.	104
Table 5.6.	Summary of WSD, wear reduction (WR), and mean wear volume (MWV) for different concentration of S-CuO with PO, CO, RO and SO.	106

Table 5.7.	Summary of specific wear rate for different concentration of S-CuO with PO, CO, RO and SO.	115
Table 5.8.	Average COF and interfacial shear stresses for different concentration of S-CuO with PO, CO, RO and SO.	120
Table 5.9.	Summary of EP performance for different S-CuO based nanolubricant compositions.	122
Table 5.10.	Summary of WSD, wear reduction (WR), mean wear volume (MWV) and specific wear rate for different concentration of CeO ₂ with PO, CO, RO and SO.	125
Table 5.11.	Average COF and interfacial shear stresses for different concentration of CeO ₂ with PO, CO, RO and SO.	130
Table 5.12.	Summary of EP behavior for all CeO ₂ based nanolubricant compositions.	134
Table 5.13.	WSD, wear reduction (WR), mean wear volume (MWV) and specific wear rate for different concentration of PTFE with PO, CO, RO and SO.	139
Table 5.14.	Mean COF and interfacial shear stresses for different concentration of PTFE with PO, CO, RO and SO.	143
Table 6.1.	Summary of proton NMR spectra over the range of frequencies.	153
Table 6.2.	Summary of major FTIR absorption frequencies and their inferences.	153
Table 6.3.	WSD for different RO and ERO compositions.	154
Table 6.4.	Summary of mean COF and interfacial shear stress for all RO and ERO compositions with different nano-additives.	164

Table 6.5.	EP performance of all RO and ERO compositions with nano-additives.	166
Table 6.6.	Summary of WSD and MWV for different SO and ESO compositions.	168
Table 6.7.	Summary of mean COF and interfacial shear stress for different SO and ESO compositions.	173
Table 6.8.	A comparative summary of nano-additive compatibility with SO and ESO.	178
Table 6.9.	Summary of tribo-properties for all CO and ECO compositions.	180
Table 6.10.	Summary of mean COF and interfacial shear stress for different CO and ECO compositions.	185
Table 7.1.	A comparative summary of the overall study.	192
Table 7.2.	Overall summary of antiwear and antifriction improvement.	194
