

## LIST OF TABLES

---

<b>Table No.</b>	<b>Table captions</b>	<b>Page No.</b>
1.1	Comparison of Nonlinear systems versus linear systems	3
3.1	Parameters of PID controller tuned using T & E method	43
3.2	Performance characteristics of magnetic levitation system tuned with PID controller	44
3.3	Parameters of PID controller tuned using TLBO	52
3.4	Performance characteristics of TLBO algorithm	54
4.1	Time-domain specification of nonminimum phase system	61
4.2	Controller design requirements	61
4.3	Parameters of PID controller tuned via conventional tuning formulae	63
4.4	Time-domain specification of nonminimum phase system with PID controller	64
4.5	Frequency-domain specification of nonminimum phase system with PID controller	65
4.6	Comparison of time-domain specification of nonminimum phase system with Smith Predictor and conventional method	69
4.7	Parameters of PID controller obtained using GWO algorithm	76
4.8	Comparison of time-domain specification of	77

	nonminimum phase system with GWO algorithm and Smith predictive control	
4.9	Performance indices of nonminimum phase system using GWO	78
4.10	Performance comparison of control techniques	78
5.1	Parameters of Inverted Pendulum System	88
5.2	PID controller parameters for controlling the inverted-pendulum system	92
5.3	Time-domain specification of inverted-pendulum system with PID controller	94
5.4	Time-domain specification of inverted-pendulum system with LQR controller	98
5.5	Rule base matrix for Cart's Position	102
5.6	Rule base matrix for pendulum's angle	103
5.7	Comaprison of time-domain specification of inverted-pendulum system with Fuzzy Logic controller and other control techniques	106
