

List of Figures

2.1	The Dependability Tree	19
2.2	Three-universe model	21
2.3	State machine representation of different physical behavior of H_2O	40
2.4	Harel State chart example	48
2.5	UML State chart example	49
2.6	Simplex system example	57
2.7	Petri Net visual example	60
2.8	Marked Petri Net visual example	61
2.9	Event Driven Marked Petri Net visual example	63
3.1	The DFWCS system outlay	76
3.2	Digital feedwater controller status interconnections for computer	77
3.3	Reliability Prediction Framework for SCCS	79
4.1	Issues and proposed solutions for uncertainty in probabilistic models of SCS's safety and its estiates	162
5.1	The Quantitative Hazard Assessment Framework	174
5.2	State Transition Machine of Digital Feedwater Control system	175
5.3	State Transition Machines of FP, MFV and BFV	176
5.4	Expanded State Machine with working mode and failure rate	180
6.1	The RCIC system outlay	195
6.2	UML to PN mapping framework	198
6.3	UML state-chart diagram of RCICS	202
6.4	Flow chart for Mapping of Simple USCD into PN	204
6.5	Flow chart for orthogonal region USCD into PN places	205
6.6	Flow chart for orthogonal region USCD into PN arcs and transitions	206
6.7	The RCICS USCD converted into PN	207
6.8	The Reachability tree for RCICS	211
6.9	The Markov model of Hazardous states for RCICS	212
